¹ Twenty cents silver coinage, 1875, \$265,598; 1876, \$5,180; 1877, \$102; 1878, \$120; total, \$271,000.

² Includes \$475,000 in Columbian coins.

³ Includes \$2,025,000 in Columbian coins.

⁴ Includes \$10,000 in Columbian coins.

⁵ Includes \$50,000 Lafayette souvenir coins.

⁶ Includes \$30,000 in Panama-Pacific International Exposition coins.

⁷ Includes \$50,029 Illinois Centennial coins.

⁸ Includes \$25,014 Maine Centennial and \$100,056 Landing of Pilgrims coins.

⁹ Includes \$1,006,473 "Peace" coins.

¹⁰ Includes \$50,026.50 Landing of Pilgrims, \$25,014 Missouri Centennial, and \$35,022 Alabama Centennial coins.

¹¹ Grant memorial coins.

¹² Includes \$137,000 Monroe doctrine commemorative coins.

Note.—The silver dollar coins executed subsequent to 1920 represent an equivalent number of dollars converted to bullion under the act of Apr. 23, 1918—259,121,554 for export to India and 11,111,168 for domestic subsidiary coin.

¹ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agencies of the Federal reserve banks. Does not include silver bullion (a potential monetary asset) to the value of \$31,080,948, nor nickel and bronze coin, the value of which depends almost exclusively upon the Government impression rather than intrinsic metallic value or a specific reserve.

² Includes money held by the Cuban agencies of the Federal reserve banks of Boston and Atlanta.

³ Population of continental United States (estimated) July 1, 1924, 112,268,000; July 1, 1923, 111,268,000; Nov. 1, 1920, 107,401,000; July 1, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁴ Does not include gold bullion or foreign coin outside of vaults of the Treasury; Federal reserve banks, and Federal reserve agents.

⁵ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

⁶ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

⁷ This total includes notes in process of redemption, gold deposited for redemption of Federal reserve notes, deposits for redemption of National bank notes, deposits for retirement of additional circulation (Act of May 30, 1908), deposits reserved against postal savings deposits.

⁸ Note.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$12,979,025.63 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars, held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such undeposited or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Federal reserve bank notes and national bank notes are secured by United States Government obligations, and a 6 per cent fund for their redemption is required to be maintained with the Treasurer of the United States in gold or lawful money.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

Fiscal year ended June 30—	Population	Total stock of coin and bullion		Per capita		
		Gold	Silver	Gold	Silver	Total metallic
1873	41,677,000	\$135,000,000	\$6,149,305	\$3.23	\$0.15	\$3.38

Cash holdings of national banks

Reports to the Comptroller of the Currency of cash holdings on June 30, 1924, of the national banks (8,085) give:

Gold coin.....	\$19, 253, 000
Standard silver dollars.....	7, 254, 000
Subsidiary silver and minor coin.....	28, 277, 000
Gold certificates.....	37, 484, 000
Silver certificates.....	26, 662, 000
United States notes.....	23, 879, 000
National-bank notes.....	68, 251, 000
Federal reserve and Federal reserve bank notes.....	134, 121, 000
Clearing-house certificates.....	38, 000
Total.....	345, 219, 000

Cash holdings of nonnational banks

Reports to the Comptroller of the Currency of 21,937 reporting banks, other than national banks, as of June 30, 1923, show cash holdings as follows:

Gold coin.....	\$24, 077, 000
Silver coin.....	16, 866, 000
Paper currency.....	225, 292, 000
Nickels and cents.....	1, 883, 000
Not classified.....	237, 875, 000
Total.....	505, 993, 000

STOCK OF MONEY IN THE UNITED STATES DECEMBER 31, 1923

On December 31, 1923, the stock of domestic coin in the United States was \$1,719,160,130, as shown by the following table:

Stock of domestic coin in the United States December 31, 1923

Item	Gold	Silver	Total
Estimated stock of coin Dec. 31, 1922.....	\$574, 890, 817	\$711, 073, 477	\$1, 585, 964, 294

¹ Includes United States notes.

¹ Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agencies of the Federal reserve banks. Does not include silver bullion (a potential monetary asset) to the value of \$35,266,468.16, nor nickel and bronze coin, the value of which depends almost exclusively upon the Government impression rather than intrinsic metallic value or a specific reserve.

² Includes money held by the Cuban agencies of the Federal reserve banks of Boston and Atlanta.

³ Population of continental United States (estimated) Dec. 31, 1923, 111,977,000; Jan. 1, 1923, 110,560,000; Nov. 1, 1920, 107,491,000; July 1, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

⁴ Does not include gold bullion or foreign coin outside of vaults of the Treasury, Federal reserve banks, and Federal reserve agents.

⁵ These amounts are not included in the total, since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

⁶ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

⁷ This total includes \$18,738,390 of notes in process of redemption, \$186,446,905 of gold deposited for redemption of Federal reserve notes, \$14,389,261 deposited for redemption of National bank notes, \$13,440 deposited for retirement of additional circulation (act of May 30, 1908), and \$6,601,036 deposited as a reserve against postal savings deposits.

Note.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$162,979,026.63 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars, held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible in this terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Federal reserve bank notes and national bank notes are secured by the United States Government obligations, and a 5 per cent fund for their redemption is required to be maintained with the Treasurer of the United States in gold or lawful money.

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

United States gold coin in Canadian reserves on December 31, 1923

Location	United States gold-coin holdings
In treasury of Dominion of Canada	\$41,090,396
In charter banks (14 in number)	36,861,017
Total in Canadian reserves	77,951,412

banks in India without any great difficulty, and the position became further improved by a good up-country demand and by important amounts of silver being moved from Bombay to China to meet the reduction in the stocks there.

With heavy China selling, although India continued a fair buyer, prices dropped back to 31½d. during the first half of October, but recovered again gradually until the comparatively high level of 33½d. was reached on November 19. The Indian demand became very large both for shipment and to reduce the still important bear position. There was also a good demand from China, principally for shipment to arrive in time for the Chinese New Year.

A sharp fall in the American exchange, due largely to the impending general election and the fears of what might be the outcome, together with China buying in New York, cut short the sales of silver from that quarter. The revolution in Mexico which occurred at that time, interfering with production, also had the effect of raising the New York quotation.

From this point, with the exception of the holiday period, the market continued fairly active, the highest price for the year, 33½d. being quoted on December 18. India was a good buyer, but China, although still purchasing prompt silver in America, was inclined to make forward sales here, so that orders were fairly easily filled. There was also a disposition on the part of America to sell for February delivery. The Indian demand being principally for shipment January 3 and 31, the margin between the two rates has again become increased.

The closing prices of the year are 33½d. for ready and 32½d. for forward delivery, showing an appreciation of 1½d. in the former and 2½d. in the latter quotations. The average cash price for the year is 31½d. per ounce standard.

The December returns not being available yet, it is only possible to give the details of the exports and imports to the end of November, and for the purposes of our report the figures mentioned are taken as approximate.

Exports to India during the year both from London and New York show a considerable increase on the returns from 1922.

Shipments to China, on the other hand, have been 8,000,000 ounces less from London, but show an increase from San Francisco, 49,500,000 ounces having been shipped during the 11 months, compared with 48,300,000 ounces for the whole of the preceding year.

The total exports of silver to the end of November have amounted to 77,000,000 ounces.

Imports of refined and unrefined silver, including coin not of legal tender, show a return of 63,000,000 ounces, representing an increase of 13,000,000 ounces over last year's receipts.

It will be noticed that there is a discrepancy between the amount of silver imported and exported of 14,000,000 ounces. The principal reason for this difference lies in the fact that the English mint has continued to call in our former legal tender coins of 925 fine and reissue them at a quality of 500 fine, the resulting silver recovered having been shipped to China in the same manner as in 1922.

Less silver has again been received from Canada, but the demonetization of currency in Czechoslovakia and other parts of the Continent has again been an important source of supply, being responsible for rather more than one-third of the total imports of silver.

One million ounces of refined silver have arrived from the Transvaal as against 200,000 ounces in 1922, due to the greater working capacity of the Rand refineries.

The effect of the purchases of silver in accordance with the provisions of the Pittman Act in America, has continued to be felt throughout the year. Although the actual purchases were completed in July, deliveries are still being made. The latest advices we have received show that on December 11 there was still an outstanding balance of 1,790,531 ounces. The full weight of the American production, approximately 55,000,000 ounces, will not be felt therefore until next year, and the effect which the sales of this silver will produce upon prices generally must depend upon whether the production is maintained at the same high level as when the silver could be sold at \$1 per ounce to the United States Treasury and upon the absorbing power of both India and China. With the various European Governments sellers rather than buyers of silver, the American producers will have to depend chiefly upon the eastern markets for the main outlet of their silver for some time to come. There is an attempt being made in New York to encourage home consumption as much as possible, and in this connection it is worthy to note that the great increase in the film-producing industry continues to be an important factor in the absorption of silver.

Highest, lowest, and average price of bar silver in London, per ounce British standard (0.925), since 1833; and the equivalent in United States gold coin, of an ounce 1.000 fine, taken at the average price and par of exchange

1726	15.15	1766	14.80	1806	15.52	1846	15.90	1886	20.78		

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Fixley and Abell's tables, from 1879 to 1896 from daily cable prices from London to the Bureau of the Mint, and since from daily London quotations.

RATIO OF SILVER TO GOLD, AS AFFECTED BY WORLD WAR

During the period December, 1916, to June, 1920, it is probable that the world's basic silver price was that of New York rather than that of London. The normal relationship between the two prices—New York a fraction of a cent below the London quotation with exchange considered—did not prevail during this period, when the average monthly New York price varied between approximately 3 cents above and 6 cents below the London price. This period appears to have been initiated by enormous coinages to meet war-time needs, and large silver shipments from the United States to the Orient. Its close was coincident with the removal of the product of United States mines from the world market, purchases under the Pittman Act of April 23, 1918, having begun in June, 1920.

The ratio of silver to gold, based on the New York price, was for this period: Calendar year 1917, 24.85; 1918, 21; 1919, 18.44; 1920, 20.27.

With the partial release during the first half of 1919 of British governmental control of gold export, the London price of exportable gold advanced above its monetary par. The ratio of silver to this gold, based on the average London price of both metals, follows: 1919, 17.53; 1920, 20.41; 1921, 32.34; 1922, 30.11; 1923, 31.35.

Bullion value of the silver dollar (371 1/4 grains of pure silver) at the annual average price of silver each calendar year since 1857

VALUES OF FOREIGN COINS, OCTOBER 1, 1921

In pursuance of the provisions of section 25, of the act of August 27, 1894, as amended by section 403, Title IV, of the act of May 27, 1921, and reenacted by section 522, Title IV, act of September 21, 1921, I hereby proclaim the following estimate by the Director of the Mint of the values of the values of pure metal contents of foreign coins to be the values of such coins in terms of the money of account of the United States, to be followed in estimating the value of all foreign merchandise imported into the United States during the quarter beginning October 1, 1924, expressed in any such metallic currencies: *Provided, however, That if no such value has been proclaimed, or if the value so proclaimed varies by 5 per cent or more from a value measured by the buying rate in the New York market at noon on the day of exportation, conversion shall be made at a value measured by such buying rate, as determined by the Federal Reserve Bank of New York and published by me as certified by said bank pursuant to the provisions of said section 25 as amended.*

A. W. MELLON,
Secretary of the Treasury.

MONETARY LEGISLATION

[PUBLIC—No. 440—67TH CONGRESS]

[S. 4468]

AN ACT To authorize the coinage of 50-cent pieces in commemoration of the three hundredth anniversary of the settling of New Netherland, the Middle States, in 1624, by Walloons, French, and Belgian Huguenots, under the Dutch West India Company.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in commemoration of the three hundredth anniversary of the settling of New Netherland, the Middle States, in 1624, by Walloons, French and Belgian Huguenots, under the Dutch West India Company, there shall be coined at the mints of the United States silver 50-cent pieces to the number of three hundred thousand, such 50-cent pieces to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury which said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

SEC. 2. That all laws now in force relating to the subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material and for the transportation, distribution, and redemption of the coins, for the prevention of debasement or counterfeiting, for security of the coin, or for any other purposes, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the United States shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

SEC. 3. That the coins herein authorized shall be issued only upon the request of the Fifth National Bank of New York, and upon payment of the par value of such coins by such bank to the United States Treasury.

Approved, February 26, 1923.

[PUBLIC—No. 46—68TH CONGRESS]

[S. 684]

AN ACT To authorize the coinage of 50-cent pieces in commemoration of the commencement on June 18, 1923, of the work of carving on Stone Mountain, in the State of Georgia, a monument to the valor of the soldiers of the South, which was the inspiration of their sons and daughters and grandsons and granddaughters in the Spanish-American and World Wars, and in memory of Warren G. Harding, President of the United States of America, in whose administration the work was begun.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in commemoration of the commencement on June 18, 1923, of the work of carving on Stone Mountain, in the State of Georgia, a monument to the valor of the soldiers of the South, which was the inspiration of their sons and daughters and grandsons and granddaughters in the Spanish-American and World Wars, and in memory of Warren G. Harding, President of the United States of America, in whose administration the work was begun, there shall be coined at the mints of the United States silver 50-cent pieces to the number of not more than five million, such 50-cent pieces to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, which said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

SEC. 2. That the coins herein authorized shall be issued only upon the request of the executive committee of the Stone Mountain Confederate Monumental Association, a corporation of Atlanta, Georgia, and upon payment by such executive committee for and on behalf of the Stone Mountain Confederate Monumental Association of the par value of such coins, and it shall be permissible for the said Stone Mountain Confederate Monumental Association to obtain said coins upon said payment, all at one time or at separate times, and in separate amounts, as it may determine.

SEC. 3. That all laws now in force relating to the subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material and for the transportation, distribution, and redemption of coins, for the prevention of debasement or counterfeiting, for security of the coin, or for any other purposes, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the United States shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

Approved, March 17, 1924.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production, import, export, and coinage of gold and silver, and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies, in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where data other than from the interrogatory replies are published the source of the information is stated. Conversions of foreign moneys or values into United States equivalents have been made at the legal par rates unless otherwise stated (in the text).

Revised world tables for 1922 and tables for 1923, subject to revision, are printed at the end of this volume. Detailed data, arranged by continents and countries, follow herewith; they form the basis of the tables.

NORTH AMERICA

CANADA

The amount of domestic silver coin withdrawn from monetary use for recoinage during the year ended December 31, 1923, was \$128,193.

The amount of gold and silver, in the form of jewelry and dental scrap, returned from the industrial arts to monetary use during the year ended December 31, 1923, was as follows: Gold, 4,959 fine ounces, valued at \$102,523; silver, 2,214 fine ounces, valued at \$1,437.

The total import of United States gold bullion melted at mints during the year 1923 was 140 fine ounces, valued at \$2,887.

The production of gold and silver during the year 1923 was as follows: Gold, 1,223,601 fine ounces, valued at \$25,294,076; silver, 17,754,706 fine ounces, valued at \$11,518,008.

Approximate stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1923

ESTABLISHMENT OF A CENTRAL BANK OF ISSUE

[From Federal Reserve Bulletin, May, 1923]

The establishment of a central bank of issue, to be called Banco de Mexico, was approved by the legislative bodies of Mexico on January 20, 1923. This step became apparently necessary ever since the total breakdown of the Mexican banking system during the Carranza administration. The few privately owned institutions left to operate were without any connection with the Government. This fact, coupled with the absence of an elastic circulating medium issued by a central bank, since the present monetary system is metallic only, called for the establishment of an official banking institution. Scarcity of gold for circulation, depreciation of the silver currency, absence of rediscount facilities, the uncertain political situation, lack of supervision and large reserves necessitated by public distrust, emphasized the evident necessity for a bank of this character.

The Government will be responsible for the notes issued by the bank and is to have the right to purchase all shares in the hands of private individuals after 15 years of operation. The total amount of notes issued, added to deposits payable on demand or at 3 days' sight, is not to exceed twice the amount of cash and bullion on hand.

Metallic reserve and note circulation of the National Bank of Mexico at the close of 1923, 1922, and 1921

[From El Economista, Madrid, November 17, 1923, and July 16, 1924]

1 960 ounces.

² 1,485 ounces.**COSTA RICA**

The amount of domestic silver coinage executed during the year ended December 31, 1923, was 696,923 colones (\$174,231).

The amount of domestic silver coins, containing 20 grams of silver, 0.900 fine, to each colon, withdrawn from circulation during 1923 and restamped with a legal value double their original value, was 971,319 colones (\$242,830).

The value of the gold and silver produced from deep mines (figured at the rate of 15 colones per ounce of gold and 0.60 colon per ounce of silver) was as follows: Gold, 2,139,255 colones (\$534,814); silver, 25,011 colones (\$6,253).

Approximate stock of gold and silver coin, also of paper money, used for monetary purposes on December 31, 1923

Character of stock	In home Government treasuries	In home banks	In circulation	Total used for monetary purposes

¹ These gold coins when minted had a legal value of \$0.4652 United States currency to the colon. They have not been reminted. They are deposited as a guaranty for the paper currency.

² Conversion rate, 4 colones equal 1 United States dollar.

³ Including issues made by the Banco Internacional, which is under Government control, amounting to 17,544,479 colones, and silver certificates issued by the Government amounting to 1,102,218 colones.

⁴ Notes issued by the defunct Banco Comercial and now guaranteed by the Government.

⁵ On hand in chartered banking institutions for use in the course of business, and not held as reserve.

Costa Rican gold coins have not circulated for several years. Before the law was enacted providing for the restamping of silver coins at double their original value there was a tendency to hoard these coins, while the legal value of the colon was fixed at \$0.25 United States currency, in October, 1922. United States currency was at a premium during the year 1923, the highest rate being 4.98 colones to \$1, and the lowest rate 4.25. The average for the year was 4.55.

Exports of gold and silver to the United States during 1923: Gold coin, 46,237 colones (\$11,559); gold bullion, 2,139,254 colones (\$534,814); silver coin, 123,435 colones (\$30,859); silver bullion, 25,011 colones (\$6,250).

CURRENCY CONDITIONS

[From Supplement to Commerce Reports, Trade and Economic Review for 1922, No. 27]

The banks of issue, Banco Anglo Costarricense, Banco Mercantil de Costa Rica, and the Banco de Costa Rica, have been redeeming their outstanding bank notes in accordance with law, and there are now only small amounts of their bills in circulation. All such redemptions have been and are being made in gold. The Banco Internacional de Costa Rica, which is closely affiliated with the Government, is the only bank now authorized to issue bank notes. No new issues of importance have been made, and the feeling in public and governmental quarters is opposed to further issue.

Fractional silver currency was called in during the summer of 1923 and restamped at double its former face value to accord with the change in the legal rate of exchange from 2.15 to 4 colones to equal the American dollar. The first of the altered coins were placed in circulation by the national mint in July, 1923.

Upon the completion of the restamping of fractional silver coins at double their former face value, and the retirement from circulation of an equal amount of silver bills (or certificates), in accordance with the law of July 7, 1923, the total circulation of national currency will be:

	Colones
Bills of the Banco Internacional.....	17,985,008
Silver coins, restamped.....	1,472,242
Copper coins.....	568,000
Nickel coins (practically all in the Treasury).....	12,600
Unredeemed silver certificates.....	101,519
Total circulation.....	20,139,369

CUBA

¹ Pesos.

Premium on gold in 1922: Highest, 69 pesos for one U. S. dollar; lowest, 52; average, 58.

The import of metal coin and paper currency from the United States during 1922 amounted to \$540,100.

HAITI

Approximate stock of gold coin and paper money used for monetary purposes on December 31, 1923

Character of stock	In home banks	In circulation
	<i>U. S. dollars</i>	<i>Gourdes</i>
Gold coin	300,000	
United States bills	1,200,000	
Notes of banks of issue		9,600,000

The actual currency consists of paper, and fractional nickel and copper coins.

NETHERLANDS WEST INDIES—CURAÇAO

Stock of gold and silver and note circulation of the Curaçaosche Bank on December 31, 1923: Gold coin, 250,910 guilders (\$100,866); silver coin, 446,204 guilders (\$179,374); paper money in circulation, 1,197,535 guilders (\$481,409).

The actual currency consists principally of paper and some silver.

Premium on gold in 1923: Highest, 5 per cent; lowest, 4 per cent; average, $4\frac{3}{4}$ per cent.

NICARAGUA

The export of gold and silver from Nicaragua to the United States during the year ended December 31, 1923, was as follows: Gold coin, \$16,823; gold bullion, \$823,554; silver coin, \$50,711; silver bullion, \$262,354.

PANAMA

Estimated quantity of gold and silver used in the industrial arts during 1923

Material used	Gold	Silver
	<i>U. S. dollars</i>	<i>U. S. dollars</i>
Old jewelry, plate, etc.	5,000	5,000
Domestic coin	5,000	
Total	10,000	5,000

The total quantity of gold produced from placer mining during the year 1923 was \$2,000.

Approximate stock of United States gold and silver coin used for monetary purposes on December 31, 1923

Character of stock	In home banks	In circulation
Gold coin.....	<i>U. S. dollars</i> 400,000	<i>U. S. dollars</i> 40,000
Silver coin.....	125,000	200,000

The only gold import is a small amount of South American gold coin constantly coming in and being sold to the banks, which immediately reexport it to the United States. This comes chiefly from Peru, Ecuador, and Colombia. Due to the exhaustion of the gold stocks of those countries, there is very little of this now. The total movement for last year would probably be about \$75,000.

SALVADOR

Gold and silver produced from deep mines and exported during the year ended December 31, 1923: Gold, \$14,857; silver, \$3,600.

Approximate stock of gold coin and bank notes used for monetary purposes on December 31, 1923

Character of stock	In home banks	Total used for monetary purposes
Gold coin.....	<i>U. S. dollars</i> 3,337,000	<i>U. S. dollars</i> 3,337,000
Notes of banks of issue.....		<i>Colones</i> 10,166,471

The actual currency consists of the paper colon and nickel fractional coinage.

Imports and exports of United States gold coin during the year 1923: Imports, \$1,100,000; exports, \$3,800.

VIRGIN ISLANDS

The estimated amount of gold and silver coin withdrawn from monetary use for industrial purposes during the year ended December 31, 1923, was as follows: Domestic gold and silver coin, 100 Virgin Island dollars each (\$96 each); United States gold and silver coin, \$200 and \$100, respectively; British gold coin, £25 (\$122).

The estimated quantity of gold and silver, in the form of old jewelry, plate, etc., used in the industrial arts during 1923 was as follows: Gold, 500 Virgin Islands dollars (\$482); silver, 200 Virgin Islands dollars (\$193).

Approximate stock of gold and silver coin, also of paper money, used for monetary purposes on December 31, 1923

Character of stock	In home banks	In circulation	Total used for monetary purposes
Gold coin.....	<i>Francs</i> 440,895	<i>Francs</i> 25,000	<i>Francs</i> 465,895

United States equivalent	\$18,032	\$5,399,561

MONETARY REFORM

[From The Economist, London, July 5, 1924]

An Argentine Government project proposes a reform of the monetary system by blending the Banco de la Nacion Argentina and the conversion office, the latter as an issue department, with minting facilities, the currency being a single-type gold standard, guaranteed by 50 per cent in gold, 15 per cent in public funds, 15 per cent bills rediscounted for banks. New money—gold, silver, nickel, and notes—is to be issued with a basic value of 20 cents gold, styled nacionales, of which 2.20 will be the equivalent of the present paper dollars. This will be the rate for conversion. The Government may use the gold over 50 per cent aforesaid to meet obligations, replacing gold by bonds. The total new currency proposed is 2,243 millions nacionales.

BOLIVIA

Gold and silver reserves and notes held in reserve, as well as notes in circulation, of Bolivian banks on December 31, 1923

Name of bank	Gold reserve		Silver reserve	Notes	
	British coin	U. S. coin		Held in reserve	In circulation
	£	U. S. dollars	Bolivianos	Bolivianos	Bolivianos

Premium on gold in 1923: Highest, 4.307 per cent; lowest, 4.199 per cent; average, 4.261 per cent.

CURRENCY

The common currency of the country is now greatly depreciated national paper, whose value has latterly been stabilized by the action of the Oficina de Cambios at $\frac{1}{100}$ of an Argentine paper peso or $\frac{1}{100}$ of a gold peso. At this valuation the total of outstanding paper has a gold backing of slightly more than 50 per cent.

There are no silver or copper coins at present in circulation; but under the law of November 16, 1920, 2,850,000 paper pesos worth of Paraguayan nickel coins of 20, 10, and 5 centavo denomination have been rehabilitated at ten times their face value.

PERU

GOLD AND SILVER PRODUCTION IN 1923

[From Bureau of Mines, Peru. By courtesy of United States Geological Survey]

Gold, 120,372 fine ounces; silver, 18,654,793 fine ounces.

URUGUAY

In March, 1921, there were placed in circulation 300,000 pesos in 20 centesimo silver pieces reminted according to the law of June 21, 1920. By resolution of the National Administrative Council of August 8, 1921, the reminting of 200,000 pesos more, in 20 centesimo pieces, was authorized.

The exportation of gold coin in the year 1921, amounted to 3,310,046 pesos (\$3,423,250), there being no imports.

Monetary circulation on December 31, 1921

By a law promulgated November 11, 1921, there was extended until December 31, 1922, the expiration of the nonconversion of gold certificates adopted as an emergency law as a consequence of the European war, the prohibition to export gold also subsisting until that date.

URUGUAY TO ESTABLISH MINT

[From Commerce Reports, May 14, 1923]

It has been officially announced in Uruguay that the Bank of the Republic has decided to establish its own mint, and with this end in view has sent its secretary to Santiago with instructions to study the organization of the Chilean mint.

VENEZUELA

EXPORT OF GOLD COIN

[From Supplement to Commerce Reports. Trade and Economic Review for 1922. No. 13]

Gold coin was exported in 1922 to the amount of \$1,063,079, of which \$407,000 to the United States.

GOLD PRODUCTION IN 1922

[From Memoria, Ministerio de Fomento, Caracas, 1922-1923. Courtesy of United States Geological Survey]

The gold production in 1922 was 540 fine kilos (17,361 ounces)

EUROPE

ALBANIA

CURRENCY

Albania has no coinage system as yet. The proposed future units are those of the Latin Union. The French gold Napoleon and the Austrian silver crown are the most widely used coins. Italian lire and Turkish coins are also accepted.

COINAGE AND EMISSION OF SILVER MONEY

[By Consul on Detail, R. W. Heingartner, Vienna]

By Federal law of December 21, 1923, the Government is authorized to withdraw from circulation bank notes of 5,000 and 10,000 crowns and to replace them with silver coins, the total amount not to exceed 60,000 crowns per capita.

The following silver coins are to be minted: "Half shilling," with a face value of 5,000 crowns, having a rough weight of 3.5 grams and a fine weight of 2.8 grams; "shilling," with a face value of 10,000 crowns, having a rough weight of 7 grams and a fine weight of 5.6 grams; "double shilling," with a face value of 20,000 crowns, having a rough weight of 14 grams and a fine weight of 11.2 grams. The coins will be composed of a mixture of $\frac{800}{1000}$ silver and $\frac{200}{1000}$ copper, and must be accepted in unlimited quantities according to their face value.

BELGIUM

The total import of United States gold bullion during the year ended December 31, 1923, was 8 fine kilos (257 ounces).

The Colonial production of gold from deep mines during the year ended December 31, 1923, was 3,146 fine kilos (101,144 ounces).

The amount of notes of banks of issue in circulation on December 31, 1923, was 7,345,431,000 francs.

With regard to the circulation in the interior of the country, there is no premium on gold coin as compared with silver or other coin and with national bank notes.

OLD BULGARIAN CURRENCY EXCHANGED FOR NEW

[From Commerce Reports, April 7, 1924]

All Bulgarian paper currency must be turned in to the National Bank of Bulgaria not later than April 15, 1924, to be exchanged for the new 1922 issue printed in America, in accordance with a royal decree dated December 6, 1923. The old paper currency consists of gold treasury bonds of 1,000 leva, and gold and silver bank notes. The new issue comprises only bank notes. In order that exchange may be affected, it is necessary that the old currency be actually presented to the National Bank of Bulgaria.

DISCOVERY OF GOLD MINES

[From bullion circular of Samuel Montagu & Co., October 24, 1923]

The Frankfurter Zeitung dated October 15 states that gold has been found near Cirpan, eastern Roumelia, on the northern edge of the Maritza plain, east of Philippopolis. There are many claims taken up, but the holders are in need of funds which, however, the Bulgarian Government may provide. Experts state that the find is a paying proposition and easily workable.

CZECHOSLOVAKIA**COINING OF GOLD DUCATS FOR COMMERCE**

[From Commerce Reports, January 8, 1923]

A statute has been passed for the coining of a Czechoslovak gold ducat which is to be used as a commercial coin; it will be sold at a minimum extra cost to cover the minting charges. One object of the new coin is to test out the demand for gold. Two metric tons of gold arrived from London during December and the first 1,000 ducats will be offered for sale within a short time.

[From bullion circular of Samuel Montagu & Co., London, May 9, 1923]

It is reported that the new Czechoslovak gold ducat will be of the ancient fineness, 0.986, which exceeds that of the sovereign. It will weigh not more than 53.86 grains, with about 52 grains of pure gold. It will be coined from a mixture of roughly 986 parts of gold and 14 parts of copper. The first thousand of the new ducats will be numbered, the rest will bear only the year in which they are

minted. The size of the new ducat is 19.75 millimeters. It is not intended to be a circulating medium, but a coin for commercial purposes only, and its price will be fixed by those by whom it will be bought and sold.

GOLD PRODUCTION

[From Edelmetallhandel im Jahre 1923, Jacob & Scheidt, Berlin]

Gold production in 1923 was 150 fine kilos (4,822 ounces).

COINS ESTABLISHED BY THE COINAGE LAW OF NOVEMBER 20, 1923

1. Gold coins: 25-gulden piece, weighing 7.988 grams, of which 7.322 grams is fine gold (0.916 $\frac{2}{3}$ fine).

2. Silver coins: 5-gulden piece, weighing 25 grams, of which 18.75 grams is fine silver; 2-gulden piece, weighing 10 grams, of which 7.5 grams is fine silver; 1-gulden piece, weighing 5 grams, of which 3.75 grams is fine silver; $\frac{1}{2}$ -gulden piece, weighing 2.5 grams, of which 1.875 grams is fine silver (0.750 fine).

3. Nickel coins: 10-pfennig and 5-pfennig pieces.

4. Copper coins: 2-pfennig and 1-pfennig pieces.

The total amount of coin to be put in circulation must not exceed 30 gulden per capita for silver and 3 gulden for nickel and copper.

Among private individuals silver coin is legal tender up to 60 gulden, and nickel and copper coin up to 3 gulden.

MONETARY LAW

[From Consul Edwin C. Kemp, Danzig, November 3, 1923]

The Volkstag and Senate have together established the following law of a permanent monetary unit in Danzig from October 20, 1923.

1. The gulden and pfennig are established as monetary units in the territory of the Free City of Danzig. The gulden is one twenty-fifth of a pound sterling of English currency. The pfennig is one-hundredth part of a gulden.

2. The reichsmark remains legal tender and a monetary unit.

3. It is permitted to transact all lawful business in gulden and pfennigs. No claim in civil law in reichsmarks or any other currency may be changed into a claim in gulden or pfennigs contrary to the desire of either creditor or debtor.

4. All public, state, and municipal pay offices are obliged to accept gulden and pfennigs as payment.

5. The marking of goods by retail merchants in any monetary unit than reichsmarks, gulden, or pfennigs is forbidden; but the retail merchant may, at the request of the purchaser, accept other currency as payment.

The same provision is applicable to professional services, hotels, retail liquor dealers, public entertainments of all kinds, and to the general and municipal public utilities.

The Senate is authorized to extend the application of this provision to other enterprises.

6. Currency issued in the territory of the Free City of Danzig other than in units of reichsmarks (paper mark), gulden, or pfennigs may not be accepted by retail merchants for payment later than November 10, 1923; may no longer be issued upon this law going into effect; and all such currencies as have been issued must be withdrawn from circulation by December 1, 1923.

Such currency issues as the "industry checks," coupons, etc., are particularly indicated.

7. Upon the promulgation of this law, no unofficial currency issue in units of the reichsmark, gulden, or pfennig may be put into circulation.

8. All emergency money and all currency issues using the reichsmark as a unit and issued in the Free City of Danzig must be withdrawn from circulation as and issued in the Free City of Danzig must be withdrawn from circulation as soon as possible by the authorities issuing them, and not later than February 1, 1924.

9. The Senate is authorized to raise the sum required for the execution of this law by a loan not to exceed 6,000,000 of gulden.

The Senate is authorized to issue administrative regulations as required to adopt existing laws and regulations to the permanent monetary unit, and to make other necessary changes.

Local boards are granted similar authority as regards the regulations issued by them within their competency. In municipalities of less than 2,500 inhabitants the regulations of the local boards are subject to the approval of the Senate.

So far as these regulations conflict with the local law they are canceled upon a decision being made thereon by the main committee of the Volkstag.

The regulations of the Senate are to be published in the Gesetzblatt.

10. The Senate is authorized to punish contraventions of this law by imprisonment not to exceed one year or a fine not to exceed 10,000 gulden.

11. This law will come into force upon the day of its publication.

The Senate is ordered to carry out the provisions of this law.

DANZIG, October 20, 1923.

The Senate of the Free City of Danzig.

(Signed) SAHM.

Dr. VOLKMANN.

CURRENCY STABILIZATION

[From Bankers' Magazine, London, January, 1924]

Hitherto Danzig had used the German mark, but its loss of value led to the use of pound notes and dollar notes in ordinary trade, the German mark being accepted at its exchange value, although it remained the money of account. To regularize the conditions which had come about in practice, the city has passed a law making the gulden and pfennig the unit of account, the gulden being equal to one-twenty-fifth part of the pound sterling and the pfennig to one-one-hundredth part of the gulden. For the present the reichsmark also remains legal tender and also the unit of account, the decree stating that all legal business may be transacted in gulden and pfennig, but no private claims in reichsmark or any other currency may be converted into gulden against the wish of the creditor or debtor. The new currency is being issued in exchange for sterling, and apparently the public confidence in the integrity of the plan has been sufficient to enable it to be put into operation. The institution which issues the new currency is not a government department, but one which has been formed by the principal Danzig banks acting in concert.

TOTAL ISSUE OF THE NEW CURRENCY ON OCTOBER 31, 1923

[By Consul Edwin C. Kemp, Danzig, November 7. In Commerce Repts., January 7, 1924]

The first bimonthly statement of the Danziger Zentralkasse A.—G., provisional bank of issue for the new Danzig currency, gives the following total for the issue of the new currency to October 31, 1923: (1) Notes in circulation, 5,974,688 gulden (equal to £238,987), and (2) notes secured by (a) English notes and checks on London, £12,224, and (b) bank credits, £226,764.

The actual currency consists of Esthonian paper marks and nickel coins of 1, 3, and 5 marks denomination.

Premium on gold in 1923 (exchange on 10 gold rubles): Highest, 190; lowest, 165; average, 177.

CIRCULATION OF CURRENCY

In 1917 several different currencies were in circulation in Esthonia: The Russian ruble, greatly depreciated; the German mark, introduced by German authorities then occupying the Baltic States; and the Finnish mark, obtained through a loan from Finland.

On November 23, 1918, by a decree of the National Assembly, Esthonian money was first put into circulation, in the form of 5 per cent bonds in denominations of 50, 100, 200, 500, 1,000, 5,000, and 10,000 Esthonian marks, established on the basis of parity with the German mark. The total issue of these bonds was 250,939,750 marks.

On December 9, 1918, the Estonian Minister of Finance was authorized by the provisional government to issue treasury notes, also on a basis of parity with the German mark, in denominations of 1, 3, 5, 10, 20, 50, 100, and 500 marks, and 5, 10, 20, and 50 pennies.

By regulations of January 29, 1919, the Estonian mark was established on a basis of parity with the Russian Duma ruble and Tsar ruble. Importation of Russian money was forbidden. In April, 1919, however, the Finnish mark was permitted to circulate on a basis of parity with the German mark.

A law passed on May 2, 1919, established the Estonian mark as the sole legal tender, although Russian and German fractional currency was permitted to circulate until January 17, 1920.

CURRENCY REFORM

[From Federal Reserve Bulletin, December, 1923]

The latest attempt at reform of a greatly depreciated currency has been the organization, by Government decree, on October 15, of a new bank of issue in Germany, known as the Rentenbank. While the bank has already begun operations, the plan is in the experimental stage. The capital of the bank is 3,200,000,000 rentenmarks, raised by compulsory contributions from holders of agricultural land and from industrial, commercial, and banking institutions * * *, the contribution taking the form of a mortgage or a bond amounting to 4 per cent of the value of the property pledged. * * * On the basis of these mortgages the Rentenbank has issued 5 per cent gold mortgage bonds (rentenbriefe) to serve as cover for the new notes to be issued by the Rentenbank up to an amount not exceeding its capital and surplus. * * * Rentenmarks are receivable in all payments to the Government, but are not legal tender, a quality retained by the old paper mark. The new currency is intended as an intermediate step

toward the return to the gold standard, and a commission has been appointed to prepare the plans for further currency reform. In the meantime the Reichsbank has been authorized to issue notes fully covered by gold or foreign exchange which are redeemable in gold, dollars, or pounds sterling.

GIBRALTAR

The colonial treasury in Gibraltar does not keep a supply of either gold or silver, and depends entirely on local banks for its requirements.

No gold is in circulation.

The official currency of the town is sterling, but owing to the proximity to Spain and to the great influx of Spaniards into the town during the day, Spanish money has a larger circulation and currencies of most nations are freely accepted.

GREECE

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1922, was as follows: Gold, 350 fine kilos (11,252 ounces); silver, 1,000 fine kilos (32,150 ounces).

No gold or silver mines are worked in Greece. The Laurium mines and metallurgical works in Attika produce pig lead containing an average of 3 grams of gold and 1,300 grams of silver per metric ton. The Laurium pig lead production for the year ended December 31, 1922, amounted to 4,405 metric tons. The whole of the pig lead production is exported mostly to England, where the gold and silver contents are extracted by further treatment.

NOTE.—Gold production on above basis, 13,215 kilos; silver, 5,726.5 kilos. The note circulation of the National Bank may be analyzed as follows: Circulation for the bank's own business, 263,405,000 drachmas; original forced circulation, 44,951,915 drachmas; increase of issue for the needs of the State, 2,250,000,000; circulation authorized by law, 1,139,784,175; total, 3,698,141,090 drachmas.

SILVER PRODUCTION

[From Norges Bergverksdrift, 1925]

The silver production in 1922 amounted to 6,381 kilos (205,149 ounces).

POLAND

Approximate stock of gold and silver in Home Government Treasuries on December 31, 1923

Character of stock	In home Government treasuries
Gold coin	Polish marks
United States equivalent	52,960,802
	\$12,622,425
Silver coin	19,602,740
Silver bullion	1,325,624
Total silver	20,928,364
United States equivalent	\$4,986,086

The actual currency (since early in 1924) is the zloty polski, always equal to the Swiss franc at current rate of exchange.

Premium on gold in 1923: Highest, 629,000 marks; lowest, 40,000 marks; average, 334,000 marks.

Metallic stock and note circulation of the Bank of Poland on December 30, 1923

[From The Economist, London, February 9, 1924]

Character of stock	Value	
Gold	Polish marks	U. S. dollars
Silver	54,902,000	13,077,400
Foreign coin (gold marks)	19,325,000	4,636,865
Notes in circulation	3,098,000	737,944
	82,185,343,251,000	

[From The Economist, London, March 29, 1924]

Circulation on December 31, 1923: ¹ 125,371,955,000,000 Polish marks.

¹ Including German, Russian, and Austro-Hungarian notes, converted into national currency.

The quantity of silver produced from deep mines during the year ended December 31, 1922, was 637 fine kilos (20,479 ounces).

Stock of gold and silver coin in home Government treasuries on December 31, 1922: Gold coin, 41,028,104 Polish marks (\$9,772,894); silver coin, 44,128,298 Polish marks (\$10,511,360).

Premium on gold in 1922: Highest, 2,000 marks; lowest, 1,400; average, 1,600. Forty thousand Polish marks always equal to one Swiss franc.

The import of gold from Russia during the year 1922 was as follows: Coin (rubles), 5,000,000 Polish marks (\$1,191,000); bullion, 8,000,000 Polish marks (\$1,905,600).

PORTUGAL

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1923, was as follows: Gold, 3,564 kilos (114,583 ounces); silver, 22,056 kilos (709,100 ounces).

Approximate stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1923

United States equivalent.....	\$14,794,602	\$3,183,997	\$333,491

STABILIZATION OF EXCHANGE

[From Bankers' Magazine, London, April, 1924]

The stabilization of exchange has been successfully effected, thanks to (1) the balancing of budget; (2) stoppage of money printing; (3) inauguration of a vigorous deflation policy; and (4) consolidation of the internal and foreign debt. The results achieved have proved so satisfactory as to arrest the fall of the leu and to make its purchase value at home greater than its quotation on the exchange.

GOLD PRODUCTION

[From Edelmetallhandel im Jahre 1923, Jacob & Scheidt, Berlin]

Gold production in 1922 and 1923 was 4,563 and 7,797 fine kilos, respectively.

GOLD COVER FOR BANK NOTES

[From The Bankers' Magazine, London, September, 1923]

* * * The cover for the bank notes increased from a value of 514,653 chervontsy on December 1, 1922, to 12,383,303 chervontsy on July 16, 1923, the latter figure including Russian and foreign gold coin and ingots to the value of 5,431,406 chervontsy, sterling, dollar, and Swedish kroner notes to the value of 378,963 chervontsy, and sterling and dollar drafts, less 10 per cent discount, at 393,872 chervontsy. The bank notes transferred from the issue department to the State Bank by July 16 totaled 11,650,000 chervontsy. It will thus be seen that the gold cover for the notes at present in circulation is over 50 per cent.

UNIFICATION OF THE CURRENCIES OF SOVIET REPUBLICS

[From *Economic Life*, Moscow, November 20. In *Commerce Reports*, December 31, 1923]

The standardization of the local currencies of the different Republics comprising the Union of Soviet Republics and the amalgamation of these currencies into a single one, as a part of the solidification of the union, is approaching completion. The form of the unified paper currency, which is now being issued, will bear inscriptions in Russian, Ukrainian, White Russian, Turkoman, and Armenian languages. The conversion will not affect the denomination of the paper.

Prior to the formation of the Soviet federation, the first step toward unification of currency was taken on January 10, 1923, by the three Transcaucasian Republics of Georgia, Armenia, and Azerbaijan, in converting their individual currencies into a single one. Since May 1, 1923, local currencies have been replaced by Russian Soviet currency in Khiva and Bokhara. In regard to the Far East, where Soviet paper money and chervonetz notes have been proclaimed legal tender for all payments to State and communal institutions and enterprises and for co-operatives, by decree of August 3, 1923, an amendment thereto is now awaiting ratification whereby Soviet currencies are to become obligatory for private organizations and persons.

MONETARY CIRCULATION IN RUSSIA

[From *Moniteur des Intérêts matériels*, Brussels, April 24, 1924]

The State Bank has issued paper money, inconvertible at present, but covered by gold, platinum and other metals, as well as by foreign exchange and short term commercial paper. This paper money comprises denominations of 1, 3, 5, 10, and 25 chervontsy. A gold chervonetz corresponds to a pre-war 10-ruble gold coin. On March 1 the circulation amounted to 32,800,000 chervontsy.

In addition to this, there are in existence Russian Treasury bonds of 1, 3, and 5 gold rubles; these bonds are maintained at par by the operations of the State Bank, and are issued by the commissariat of finance, the issue in February being 20,000,000 gold rubles and in March 30,000,000.

There are also in existence silver coins of 1 ruble and 50 kopeks, containing 90 per cent silver and 10 per cent copper. The silver coins of 20, 15, and 10 kopeks contain 50 per cent silver.

There will soon be issued copper coins of 1, 2, 3, and 5 kopeks, struck at Petrograd. The total of treasury bonds, silver and copper coins must never exceed one-third of the monetary circulation or one-half of the chervontsy in circulation. The copper coins will be put in circulation in May to replace the paper notes now in circulation. One also meets with 25,000-ruble notes issued in 1923.

SPAIN

Metallic stock and note circulation of the Bank of Spain on December 29, 1923[From *El Economista*, Madrid, January 5, 1924]

Character of stock	Value	
	<i>Pesetas</i>	<i>U. S. dollars</i>
Gold	2,536,876,000	487,687,068

¹ The nominal value of the metallic reserve in silver at the National Bank on Dec. 31, 1923, amounted to 168,038,840 francs. By virtue of the Federal decree of Feb. 18, 1921, the National Bank is authorized to enter this reserve in the balance sheet for the market price of the silver, viz, for 90,740,974 francs.

² Including the amount in cash at the "Caisse fédérale."

The actual currency consists of Swiss National Bank notes and silver 5-franc pieces.

Premium on gold in 1923: Highest, 10.29 per cent; lowest, 2.28 per cent; average, 6.58 per cent.

TURKEY

The amount of gold coin withdrawn from monetary use, probably for striking medals, during the year ended December 31, 1923, was 18 liras (\$79.20).

The stock of paper money has not been increased since the armistice. The paper money issued during the war amounted to £T158,000,000, issued by the Turkish Government but printed in Germany; £T3,420,000, issued by the Imperial Ottoman Bank in pre-war days.

The actual currency of the country is the Turkish paper lira (or £), which, by virtue of a law enacted during the war, was put on a par level with the gold lira. Despite this forced rate the gold lira became a coin of speculation. The rate of the gold lira during last year as compared to the paper lira was as follows: Highest rate, £T paper 8.17 to 1 gold lira; lowest rate, £T paper 5.95 to 1 gold lira.

GOLD AND SILVER PRODUCTION

[From Supplement to Commerce Reports. Trade Review for 1922. No. 35]

The normal production is 45 kilos of gold and 250 kilos of silver annually.

YUGOSLAVIA

Estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1923

¹ In the National Bank and in its branches. ² Of this amount, 5,310,794 is held as reserve stock.

The actual currency is paper.

Premium on gold in 1923: Highest, 21.45 per cent; lowest, 15.31 per cent; average, 18.48 per cent.

CURRENCY

The coins of Serbia have not been changed since the war and are now legal tender throughout the Kingdom of the Serbs, Croats, and Slovenes. None of these coins, except very rarely nickel and bronze pieces of 5 and 10 paras, have been, however, in circulation since the armistice. All currency in circulation is

paper, either dinar or dinar-kronen bank notes. The latter, however, are at present gradually withdrawn from circulation, according to a decision dated January 1, 1923, and are replaced by dinar notes issued by the National Bank. It may be added that the dinar-kronen notes are dinar notes bearing upon both sides their value stated also in kronen, the latter value being four times the amount of the dinar value. Paper notes are of the following denominations: 10 paras, 20 paras, 25 paras, 50 paras, 1 dinar, 5 dinars, 10 dinars, 100 dinars, and 1,000 dinars.

During the year ended December 31, 1923, former Austro-Hungarian bank notes bearing a stamp of "SCS Kingdom," which were after the armistice temporary legal tender in the new Provinces, have been exchanged for dinars throughout the whole country and are no longer valid.

EXCHANGE VALUE OF FOREIGN CURRENCY IN COMPUTING INDIAN DUTIES

[From Commerce Reports, March 19, 1923]

On January 13, 1923, the Government of India prescribed the following conversion rates for foreign currencies, to be used in computing ad valorem duties:

	Value in Indian currency
British pound sterling.....	15 rupees.
French franc.....	5/21 rupees.
United States dollar.....	3 rupees.
Canadian dollar.....	3 rupees.
British dollar.....	1 rupee, 8 annas.
Mexican dollar.....	1 rupee, 8 annas.
Japanese yen.....	1 rupee, 8 annas.
Persian Krian.....	4 annas.
Chinese hankwan tael.....	2 rupees.

These rates will be in effect, regardless of fluctuation in exchange, until further notice by the Government. The basic change of 15 rupees to the pound sterling affects duties only, and does not apply to commercial transactions.

¹ Gold yen notes.

The imports of silver bullion during 1923 amounted to 440,942 Haikwan taels (\$372,591).

CURRENCY

The currency of the Province consists of small-coin dollars "big" or Peiyuan dollars, Chinese bank notes, Japanese gold yen notes.

Small-coin dollars consist of five 20-cent, or ten 10-cent pieces, minted by provincial mints. The average value of a "big" or Peiyuan dollar is 1.20-small-coin dollars.

Chinese bank notes are small-coin dollar notes issued by the Mukden branch of the Bank of China; copper dollar notes issued by the Kung Tsi Bank, Mukden; big-dollar notes issued by the Manchurian Provincial Bank, Mukden. The first two varieties have the same value, and it takes about one dollar and sixty cents to make a big dollar. The paper big dollar is worth 1.20 small coin or copper dollar notes.

CANTON

The domestic silver coinage executed in home mints during the year ended December 31, 1923, consisted of 4,400,000 20-cent pieces, having a face value of 880,000 yuan dollars (\$473,572).

The total import of United States gold coin during 1923 was \$2,469,300.

The actual currency is based upon the silver 20-cent coin. Discount as compared with the Hongkong dollar: Highest, 1.25; lowest, 1.14.

Imports of gold and silver coin from Hongkong and Macao during the year 1923: Gold coin (mostly American 20-dollar pieces), \$2,469,300; silver coin, \$10,700,300.

Exports of gold and silver coin to Hongkong and Macao during the year 1923: Gold coin, \$1,851,975; silver coin, \$9,054,100.

CURRENCY

The currency in use within the Canton district is based upon a silver standard. No full-size coins are issued, the circulating currency being based upon silver 20-cent pieces, many of which have been debased during the process of reminting. The silver 20-cent pieces are at a discount as compared with Hongkong currency, which is used at Canton in many transactions between Chinese and foreigners.

Canton currency is in a more or less unstable condition. During 1923, the local government made several attempts to keep the mint in operation, but without much success. Paper notes have been issued at various times, but they are very much depreciated in value and have practically passed out of circulation.

FOOCHOW

The domestic silver coinage executed in home mints during the year ended December 31, 1923, consisted of 4,000,000 20-cent pieces valued at \$430,320 gold.

Estimated quantity of gold and silver used in the industrial arts during the year 1923

Total.....	13,226	1,361,454	1,225,633	673,723	128,232

CURRENCY

The actual currency is the "chop" Mexican dollar. The present exchange rate of the brass cash piece is 1,047 cash to 1 "chopped" dollar. The exchange rate of the subsidiary silver coins—5, 10, and 20 cent pieces—is 12 dimes to 1 "chopped" Mexican dollar.

The following "chopped" dollars are in circulation: Mexican dollar, Chinese Yuan dollar, Chinese dragon dollar, American trade dollar, Straits Settlements dollar, Hongkong dollar, Indo-Chinese piaster, Spanish dollar, Japanese silver yen, Philippine silver peso.

The "chopped" dollar is usually at a discount of 2 to 4 per cent in comparison with the clean Mexican dollar.

HANKOW

The silver domestic coinage executed in home mints during the year ended December 31, 1923, consisted of 845,000 one-dollar pieces (\$454,739).

Exchange rate in 1923: Highest, \$0.81875; lowest, \$0.735; average, \$0.77385.

The total value of silver imported into Hankow from other Chinese ports during 1923 was as follows: Silver coin, 11,787,941 Yuan dollars (\$6,343,680); silver bullion, 1,105,581 Yuan dollars (\$594,968).

The total value of silver exported from Hankow to other Chinese ports during 1923 was as follows: Silver coin, 3,035,450 Yuan dollars (\$1,633,527); silver bullion, 790,999 Yuan dollars (\$425,676).

CURRENCY

Of the dollar there are many varieties, foreign and Chinese. The Mexican and the Yuan dollar are very popular with foreigners for their everyday transactions, but in large commercial transactions the Hankow tael is used.

The small coins are the silver 10 and 20 cent pieces representing theoretically the tenth and fifth part of 1 dollar, respectively, while in practice they circulate according to their intrinsic value and the general rule of demand and supply. One might get as much as six 20-cent pieces and some coppers in addition, or eleven 10-cent pieces and a few coppers for 1 dollar. Notwithstanding the fact that they are nothing but subsidiary coins, they circulate as standard in various

Provinces and are used there for all sorts of transactions and particularly in payment for the products of the country.

Of late years the copper coin inscribed as 1 cent and theoretically worth 1 cash, has added one more element to the already multiform aspect of the currency.

The silver mint of the Hupeh Province was established in 1893. The copper mint was established in 1902. And the two mints were amalgamated under the name of the Wuchang Mint in 1910.

HEILUNGKIANG AND KIRIN PROVINCES

The total import of United States gold coin during the year ended December 31, 1923, was \$240,000.

KALGAN

ANOTHER NEW MINT FOR CHINA

[By Consul Samuel Sokobin, Kalgan, October 24, 1923. In Commerce Repts., January 7, 1924]

A mint is now in the process of construction in Kalgan, China. It will be known as the K'ou Pei mint and will produce Chinese copper coins exclusively. The minting of the silver coins will be undertaken after the mint has demonstrated its success in turning out copper coins. The latter are intended for circulation in the Chahar district and the regions adjacent to the Peking Sui-Yuan Railroad. The Kalgan mint when completed will be capable of producing 500,000 copper coins in a single shift of 12 hours.

MANCHURIA

PROPOSED MANCHURIAN CURRENCY BASIS

[From Commerce Reports, February 4, 1924]

The authorities of Manchuria propose to establish the silver dollar (yuan) as the basis of Manchurian currency, according to Chinese press reports. The yuan is expected to replace the present mixed currency, including the silver dollar; Mukden "big money" dollar (representing 10 debased 10-cent pieces); Mukden "small money" dollar or "Feng-Piao" (representing 12 debased 10-cent pieces) and the various currencies, including small-coin notes, "big money," and "small money" in Kirin and Heilungkiang Provinces. Definite plans for carrying out this proposal have not yet been made, but, it is stated, are being formulated.

NANKING

[From Consul General Edwin S. Cunningham, Shanghai, May 2, 1924]

Year	Dollar coins
1922.....	25, 673, 800
1923.....	58, 017, 000

REOPENING OF THE GOVERNMENT MINT

[By Consul John K. Davis, Nanking, February 15, 1923]

The Nanking Mint which was first established by Viceroy Lin Kwen I in 1902 for the coinage of copper and silver coins, has been operating ever since with the exception of certain intervals when for one reason or another work has been suspended. On January 4, 1923, it was reopened after having been closed for a period of five months. A new director, Mr. Chao En-hang, is in charge and a number of improvements and reforms are stated to be planned.

The mint has a permanent staff of about 30 and when running to capacity gives employment to some 500 workmen. There are 70 machines of various makes, some of which were manufactured in the United States, some are German make, and others came from Great Britain. The coins minted have been the Chinese "yuan" or dollar, fractional silver coins of the values of 20 and 10 cents, and copper 1-cent pieces. At the present time only the dollars are being made, and these are 89 per cent silver and 11 per cent copper.

SHANGHAI

The silver domestic coinage, executed at the Hangchow Mint during the year ended December 31, 1923, consisted of 50,000,000 Chinese dollar pieces (\$27,-607,926).

Approximate stock of silver coin, silver bullion, and notes of foreign and Chinese banks in Shanghai on December 31, 1923: Silver coin, 21,200,000 Shanghai taels (\$16,081,472); sycee and bar silver, 29,110,000 Mexican dollars (\$16,016,613); notes in circulation, 60,000,000 Mexican dollars (\$33,012,600).

NEW TSAO KUN DOLLARS IN CHINA

[From Commerce Reports, January 21, 1924]

New Chinese dollars bearing the effigy of Tsao Kun, now President of China, to the amount of 50,000 have been sent to Nanking for distribution throughout Kiangsu Province. Several Shanghai organizations are reported to have protested against their use in that city, where the Yuan republican dollar has not been able to supplant the popular "Mex" (Mexican dollar).

ANKING MINT

[From bullion circular of Samuel Montagu & Co., London, September 3, 1924]

According to the North China Herald it is reported that the Kiangsu Association has informed the Shanghai General Chamber of Commerce that the Anking Mint, in addition to continuing to mint bad dollars, has since June 14 been making 20-cent Kuantung coins containing only 40 per cent of silver, a shipment of which is being sent to Shanghai. Genuine Kuantung 20-cent pieces, the Kuangsu Association points out, contain 60 per cent silver, and the association alleges that the mint has just shipped 40 cases, each containing 11,000 20-cent pieces, in the steamer *Chensu* to a spot near Nanking, to be afterwards consigned to Shanghai by train. Among the 40 cases are three filled with big dollars for the purpose of satisfying customs examiners. Though silver coins are being made 500 fine, this is the first news that has reached us, with the exception of the Mahdi dollar, of coin described as silver, but with so low a proportion of the precious metal. The Mahdi dollars were issued by that potentate to supersede 5-franc pieces, then worth about 4s., but the dollars contain so little silver as to be only worth intrinsically about 3d.

SHANTUNG

Amount of gold and silver coin withdrawn from monetary use for industrial use during the year ended December 31, 1923: Domestic silver coin, 50,000 Yuan dollars (\$26,907); United States gold coin, 2,500 Yuan dollars (\$1,345); United States silver coin, 5,000 Yuan dollars (\$2,691).

TIENTSIN

The domestic silver coinage executed in home mints during the year ended December 31, 1923, consisted of 7,948,796 Yuan dollar pieces (\$4,277,644).

The amount of domestic silver coin withdrawn from circulation for recoinage during the year 1923 was 3,404,011 Yuan dollars (\$1,831,868).

The import of silver coin and bullion from other Chinese ports during the year 1923 was as follows: Coin, 7,653,333 Haikwan taels (\$6,466,990); bullion, 656,868 Haikwan taels (\$555,047).

YUNNAN

The domestic silver coinage executed in home mints during the year ended December 31, 1923, consisted of 18,720,000 50-cent pieces having a face value of 9,360,000 Yunnan dollars (\$3,556,800).

The estimated quantity of gold and silver used in the industrial arts during 1923 was as follows: Gold, 1,000 Chinese ounces (1,206 troy ounces); silver, 10,000 Chinese ounces (12,060 troy ounces).

The quantity of gold and silver produced in 1923 was approximately as follows: Gold, 500 Chinese ounces (603 troy ounces), valued at 30,000 Yunnan dollars (\$11,400); silver from 50,000 to 80,000 Chinese ounces (from 60,300 to 96,480 troy ounces), valued at 85,000 Yunnan dollars (\$32,300) to 136,000 Yunnan dollars (\$51,680).

² Comprising 1,189,500 Indo-China piasters.

CURRENCY

Local currency has depreciated greatly during the past two years. In July, 1922, the average selling rate on Hongkong was 1.25 Yunnan dollars (the equivalent of the Hongkong dollar); in July, 1923, it was 1.36; and at present it is 1.51. The chief causes of this depreciation are the debasement of the silver currency and the circulation of what is practically speaking irredeemable paper. Under certain restrictions, a few dollars in paper may be exchanged for silver at a time. As is to be expected, the silver coins disappear as soon as they go into circulation except in sections where only silver is used. The Yunnan dollar, which is the currency unit, weighs 0.72 Kuping taels.

The Yunnan tael, called shengp'ing, according to information received from Futien Bank, bears the following relation to the K'up'ing tael: 100 K'up'ing taels equal 103.6 shengp'ing taels having a recognized fineness of 0.980.

*Domestic silver coinage executed in home mints during the year ended December 31,

Total.....	15,300,000	9,000,000	3,780,000

¹ Conversion rate, 1 Yunnan dollar=\$0.42, at the 1922 average New York price of silver, \$0.67934.

The amount of foreign silver coin (French and British colonies) withdrawn from monetary use for recoinage during the year ended December 31, 1922, was 430,000 Yunnan dollars (\$180,600).

The production of gold in 1922 was 500 Chinese ounces (603 ounces, troy). According to the estimate of a person who has some acquaintance with the mining of silver in western Yunnan where it is chiefly found, the annual production of the Province amounts to at least 50,000 Chinese ounces, fine (60,332 troy ounces) and may even reach 80,000 or 90,000 Chinese ounces (108,638 troy ounces). It is said that this product largely finds its way into Burma over paths which are not within the surveillance of the customs.

There is no premium on gold coins as compared with the actual currency consisting of silver coins and bank notes, scarcely any gold coins having ever been in actual circulation. Foreign gold coins, however, are dealt in for hoarding

and industrial and art purposes and usually command a premium as compared with their mint value expressed in local currency. The premium both on sovereigns and on eagles ranged from 6½ to 13 per cent in 1923.

PALESTINE

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1923, was as follows: Gold, 2,000 Egyptian pounds (\$9,886); silver, 1,500 Egyptian pounds (\$7,414).

The total gold, silver, and notes used for monetary purposes is estimated at between 600,000 £E (\$2,965,800) and 700,000 £E (\$3,460,100) or approximately 1£E (\$4.943) per capita.

The actual currency consists of Egyptian paper pounds and piasters.

Premium on gold in 1923: Highest, 12½ per cent; lowest, 2½ per cent; average, 3 to 4 per cent.

NOTE.—The figures given above have been taken from the records of the customs and trade department of the Palestine Government. It is a well-known fact that a greater part of the trade in gold and silver is made without proper records being kept by the Government and part illicitly. According to expert opinion, 200,000 £ E (\$988,600) at least should be added to the import from Syria and about 60,000 £ E (\$296,380) for the imports from Arab Transjordan; about 40,000 £ E (\$197,720) should be added to the amount exported to the United States, 120,000 £ E (\$593,100) to Egypt, and 60,000 £ E (\$296,380) are to be added as being exported through Egypt (illicitly) to other countries.

PHILIPPINE ISLANDS

The amount of United States gold coin withdrawn from monetary use for industrial use during the year ended December 31, 1923, was 700 pesos (\$350).

The total import of United States gold coin during the year ended December 31, 1923, was 6,230,170 pesos (\$3,115,085).

Imports from and exports to Straits Settlements of gold and silver during 1923: Imports of gold bullion, 55,600 Straits dollars (\$31,570); imports of specie (silver dollars and notes), 3,669,477 Straits dollars (\$2,083,529); exports of specie (silver dollars and notes), 265,294 Straits dollars (\$150,634).

MONETARY SYSTEM

The legal tender currency consists of Sarawak Government notes in denominations of 50, 25, 10, 5, and 1 dollars; Straits Settlements silver dollars and Straits Settlements notes in denominations of 1,000, 500, 100, 50, 10, 5, and 1 dollars; Sarawak subsidiary silver, 0.400 fine, in denominations of 20, 10, and 5 cents; nickel coins in denominations of 10, 5, and 1 cent; and copper cent pieces.

Silver is the standard. The unit is the Straits Settlements dollar. Sarawak has never minted a silver dollar of its own.

The amount of subsidiary coinage in circulation is kept as low as possible. Its export or hoarding is prohibited; and the import of other countries' subsidiary coinage is also forbidden.

PAPER CURRENCY RESERVE

A sum of 50,000 dollars is kept at one of the Singapore banks against the note issue. In addition to this, the Government's investments in Straits Settlements Government loans cover the note issues many times over and although none of this is earmarked against the note issue it forms an efficient reserve.

SIAM

The domestic silver coinage executed in home mints during the year ended December 31, 1923, consisted of 1,908,000 two-salung coins, having a face value of 954,000 ticals (\$353,839).

The amount of domestic silver coin withdrawn from monetary use for recoinage during the year 1923 was 954,000 ticals (\$353,839).

SYRIA

The estimated quantity of gold, in the shape of old jewelry, plate, etc., used in the industrial arts during 1923 was 1,400 fine kilos (45,010 ounces), valued at 735,000 Syrian pounds (\$2,837,100).

The total amount of Government notes used for monetary purposes on December 31, 1923, was 9,775,900 Syrian pounds (\$37,734,974).

Premium on gold in 1923: Highest, 76; lowest, 64; average, 70.

The import of gold ore from Turkey during the year 1923 was 250,000 Syrian pounds (\$965,000).

TRANSCAUCASIA

UNIFICATION OF CURRENCY

[From Commerce Reports, May 7, 1923].

The Federal Council of the Union of Transcaucasian Republics decreed, on January 10, 1923, to abolish the issuance of national currency by the individual Republics of the Union, replacing it by standard currency for all Transcaucasia. The new currency will be issued on the basis of par (ruble per ruble) for Georgian "bonds," 1 ruble for each 100 rubles of the notes of the Azerbaijan Republic, and 1 ruble for each 150 rubles of the notes of the Armenian Republic. The old local currencies were to remain legal tender up to March 1, 1923, by which time they were to be exchanged for the new currency of Transcaucasia.

This financial consolidation of the Transcaucasian Republics was rendered imperative by the chaotic situation resulting from arbitrary and unstable rates of exchange of the different currencies. Return of goods shipped from one of the Transcaucasian Republics into another and remaining unsold, as a result of abrupt exchange variations, had been a common occurrence heretofore; it is hoped that the new measure will stabilize values and facilitate exchange.

AFRICA

ABYSSINIA

The amount of notes of banks of issue in circulation on December 31, 1923, was 214,765 Maria Theresia dollars (\$113,048).

The actual currency is the Maria Theresia dollar.

The local price of raw gold varies, but the variations appear to have little relation with outside movements.

ALGERIA

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1923, was as follows: Gold, 353.5 fine kilos (11,365 ounces); silver, 5,010.5 fine kilos (161,087 ounces).

Stock of gold and silver coin and note circulation of the Bank of Algeria on December 31, 1923: Gold and silver coin, 77,992,865 francs (\$15,052,623); note circulation, 1,014,527,410 francs.

The actual currency consists of paper francs.

Premium on gold in 1923: Highest, 12,200 francs per kilo, 0.9 fine; lowest, 10,400; average, 11,300.

Imports and exports of gold and silver during 1923: Gold leaves imported, 42 kilos (1,350 ounces); gold and silver coin exported, 130 kilos (4,179 ounces).

Algeria uses French currency, supplemented by the currency issue of the Bank of Algeria. It accepts at face value French coins and currency, issued by the French Government and the Paris Chamber of Commerce, and small denominations of coins of Algerian chambers of commerce. Municipalities have ceased to issue small denomination money and the currency of the local chambers of commerce has practically all been retired. The small denominational coins of 5 and 10 centimes in aluminum, issued by the chambers of commerce, however, continue to circulate, along with the corresponding coins in copper, mostly of French but often of most every other origin. Gold is not in circulation and French silver is only circulated to a slight extent, limited almost entirely to "light-weights". No coinage is done by or expressly for Algeria.

BELGIAN CONGO

The amount of silver coin withdrawn from monetary use and melted during the year ended December 31, 1923, was 2,482 francs (\$479).

The quantity of gold used in the industrial arts during the year 1923 was 331 fine kilos (10,642 ounces).

The quantity of gold and silver produced from the mines during the year 1923 was as follows: Gold, 2,840 kilos (91,306 ounces); silver, 272 kilos (8,745 ounces).

Stock of silver coin and notes issued by the Bank of Belgian Congo in circulation on November 30, 1923: Silver coin, 20,120,000 francs (\$3,883,160); bank notes, 39,868,368 francs (\$7,694,595).

BRITISH SOMALILAND

United States equivalent ¹	\$33,089	\$258,871	\$291,960
India Government notes.....	38,000	262,000	300,000
United States equivalent ¹	\$12,327	\$84,992	\$97,320

¹ Converted at the rate of 15 rupees to the pound sterling.

The actual currency is the same as used by the Government of India. British sovereigns are practically the only gold coins which circulate in Somaliland, and then usually change hands either at a rate dependent upon the rupee value of the British sovereign in Aden or, more frequently, in accordance with the strength of the desire of the purchaser to possess gold. Sovereigns not being legal tender in Somaliland do not, in the ordinary course of business, find their way into Somaliland Government treasuries.

Imports and exports of gold and silver coin during 1923

CURRENCY

The gold and silver coins of Great Britain are all legal tender but they are seldom seen. The British West African silver coins of 2s., 1s., 6d., and 3d. are of the same weight and fineness as the similar coins used in Great Britain. This silver coinage is being withdrawn from circulation and shipped to Great Britain to be melted. The British West African alloy coins are of the following denominations: 2s., 1s., 6d., and 3d.; and the nickel-bronze coins are of one penny, one-half penny, and one-tenth penny denominations. The British West African currency notes are of the following denominations: £5, £1, 10s., 2s., 1s.; but the £5, 2s., and 1s. notes are being withdrawn. The currency notes of Great Britain are legal tender, but are seldom seen.

SIERRA LEONE

The amount of domestic silver coin withdrawn from monetary use during the year ended December 31, 1923, was £70,740 (\$344,256).

Approximate stock of silver and alloy coin, also of paper money, used for monetary purposes on December 31, 1923

CURRENCY

Three different currencies are in use in Morocco, namely: (1) The native silver currency known as "Hassani" money; (2) bank notes of the Bank of Spain and Spanish silver coin; and (3) bank notes expressed in Moroccan francs, also divisional cupro-nickel counters issued by the State Bank of Morocco.

Hassani money.—The native silver currency or Hassani money is no longer current in the French zone of Morocco, as it was demonetized by a Sherceefian "Dahir" (decree) of June 21, 1920. This currency continues to circulate, however, both in the Spanish zone and in the international zone of Tangier, but there are no means of ascertaining with any degree of precision the amount of

this money still in circulation. On December 31, 1923, there were still outstanding, uncashed, bank notes expressed in Hassani dollars, issued by the State Bank of Morocco, for a total sum of 63,120 Hassani pesetas. The Hassani money in circulation in the Spanish zone and in the Tangier zone consists of coins of the following denominations: 1 real (25 centimes Hassani), 2 reals (50 centimes Hassani), 5 reals (1 peseta Hassani and 25 centimes), 10 reals (2.50 pesetas Hassani or half dollar Hassani), 20 reals (5 pesetas Hassani or 1 dollar Hassani).

Spanish money.—Bank notes of the Bank of Spain and Spanish silver coins, of all denominations issued, are current in the Spanish Zone of Influence and in the International Zone of Tangier.

Moroccan francs.—Bank notes in Moroccan francs, issued by the State Bank of Morocco, were in circulation on December 31, 1923, for an aggregate value of 239,470,000 francs, on December 31, 1922, 240,943,000 francs. These notes are alone legal tender in the public administration of the French zone; they are of the following denominations: 1,000, 500, 100, 50, 20, 10, and 5 francs. Divisional coin, in Moroccan francs, are composed of cupro-nickel counters of the following denominations: 1 franc, 50, 25, 10, and 5 centimes. Moroccan francs constitute the only legal currency in the French zone of Morocco. In the Spanish zone Moroccan francs are used in the settlement of all transactions in produce originating from the French zone. In Tangier all three currencies are used.

NYASALAND PROTECTORATE

Approximate stock of gold and silver coin in home banks on December 31, 1923: Gold coin, £107,138 (\$521,387); silver coin, £178,686 (\$869,575).

SILVER COINS IN THE UNION OF SOUTH AFRICA

[From Commerce Reports, March 24, 1924]

In order to dispose of the large surplus of British silver coin which the Union treasury alleges exists in South Africa, and to make room for the new silver coins to be minted by the Pretoria mint, the Imperial Government, on representations from the treasury, has agreed to withdraw reissuable British imperial silver coins of 0.925 standard of fineness in the Union at the rate of £100,000 per annum, according to the auditor general's report for 1922-23. In addition, it is to take back immediately at nominal value an extra £380,000 of such coin, the latter sum being approximately half the nominal value of the new lower-value British imperial silver coins of 0.500 standard of fineness that had been imported into the Union up to July, 1922.

The arrangement with regard to the £100,000 per annum is that British imperial coins of 0.925 fineness to this value, and also all worn coins without limitation, will be taken into the Pretoria mint for conversion into bullion, the Imperial Government paying the Union Government the difference between the nominal and bullion value thereof. The bullion will be reduced to the South African mint standard of fineness, 0.800, and minted into Union coinage, and the profit on the £100,000 (taking silver at the present market price of 2s. 7d. per ounce) will amount to approximately £65,000, less working expenses.

SOUTH AFRICAN GOLD SOVEREIGNS TO CIRCULATE IN JULY

[From the South African Mining and Engineering Journal, Johannesburg, February 24, 1923]

Under the currency act, 1920, the Union will revert to a gold currency basis on July 1, and the banks will pay out gold on demand.

PAPER CURRENCY LEGISLATION ENACTED AND PROPOSED

[Consul Charles J. Pisar, Capetown. In Supplement to Commerce Reports. Trade and Economic Review for 1922. No. 28]

The only noteworthy incident in banking in South Africa during the year 1922 was the withdrawal of the commercial banks' note circulation and the taking over of the issue of notes by the Central Reserve Bank, as provided for by the currency and banking act of 1920. The note circulation of the commercial banks, which was a source of considerable profit to them, amounted to \$44,685,000 on December 31, 1921, but was rapidly retired after the Central Reserve Bank's notes were issued. At the same time (June 30, 1922) that the right to issue notes passed to the reserve bank, the Government removed the embargo on the export of gold bullion and coin imposed in 1914. The inconvertibility of the paper currency, established under the currency and banking act of 1920, is still maintained, and, according to the plans of the Government, it is proposed to extend this inconvertibility for two years from June 30, 1923, unless within that period the pound sterling returns to parity in relation with the dollar.

The Government also proposes to make some fundamental changes in the currency act of 1920. It intends to allow the reserve bank to issue notes against a certain proportion of British or South African treasury bills; to do away with the commercial banks' representation on the board of the reserve bank; and to allow the reserve bank to discount bills up to six months' currency. The reason given for the first proposal is that there are not enough trade bills in the Union to make the note circulation elastic enough. The reason given for eliminating the representation of the commercial banks is that the presence of banking representatives at the meetings of the board tends to impair the free discussion of banking policy which may affect their own institutions. These proposals, if passed by the legislature, will come into effect on July 1, 1923.

THE NEW CURRENCY BILL

[From The S. A. Mining and Engineering Journal, Johannesburg, March 17, 1923]

The Minister of Finance has, during the week, introduced the currency and bank act amendment bill, a measure of very considerable importance, which will in due course lead to interesting financial debates. Its primary purpose is to extend the period of note inconvertibility for two years as from July 1, unless, of course, before the expiry of the two years the pound returns to parity. Two other important features in the bill may be mentioned. It is proposed to enable the Central Reserve Bank—the note-issuing authority—to issue notes against a holding of Union or British Government treasury bills. At present notes may be issued only against gold or certain high-class commercial bills, but as there has for some time past been rather a dearth of commercial bills in the Union, the intention is to allow treasury bills to be used as a reserve holding for the same purpose. The safeguard is, however, introduced that the treasury bills so employed must bear a certain definite ratio to the commercial bills, and in this way the link between the currency and the trade of the country will be maintained.

GOLD PRODUCTION IN 1922

[From S. A. Mining and Engineering Journal, Johannesburg, January 12, 1924]

The quantity of gold produced in 1922 was 7,020,110 fine ounces.

ZANZIBAR PROTECTORATE

Approximate stock of silver coin in home government treasuries and of government notes in circulation, not including reserve stock, on December 31, 1923: Silver coin, 2,467,876 rupees (\$800,579); government notes, 4,604,440 rupees (\$1,493,680).

The actual currency is the British India rupee.

SOCIETY ISLANDS—TAHITI

MONETARY SYSTEM

The amount of notes of banks of issue in circulation on December 31, 1923, is estimated at 8,500,000 francs (\$1,640,500).

The legal monetary standard and system is that of France, and French laws apply in all cases. Local currency is issued by the Papeete branch of the Bank of Indo-China, and is exchangeable at a slight discount for French currency. The notes are not redeemable in gold, but are secured by a reserve of French currency and securities.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY, AT THE CLOSE OF THE YEARS 1922 AND 1923

The following compilations have been made from such data as are available—avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coins as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted to bullion.

Production of gold and silver in the world since 1860

[The annual production of 1860 to 1872 is obtained from 5-year period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint]

Calendar years	Gold		Silver	
	Fine ounces	Value	Fine ounces	Commercial value ¹
1860	6,486,262	\$134,083,000	29,095,428	\$39,337,000
1861	5,949,582	122,989,000	35,401,972	46,191,000
1862	5,949,582	122,989,000	35,401,972	47,651,000
1863	5,949,582	122,989,000	35,401,972	47,616,000

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1922

REPORT OF THE DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 23, 1922.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1922, being the fiftieth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1921.

OPERATION OF THE MINTS AND ASSAY OFFICES.

INSTITUTIONS OF THE MINT SERVICE.

The following institutions of the Mint Service continued operations during the fiscal year ended June 30, 1922: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which makes large sales of fine gold bars; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Seattle, Boise, Helena, Salt Lake City, and Deadwood. The seven last-named institutions are, in effect, bullion-purchasing agencies for the large institutions, and also serve the public by making, at nominal charge, assays of ores and bullion. Electrolytic refineries are operated at the New York and San Francisco institutions.

COIN DEMAND.

The coinage of gold was resumed during the past fiscal year, nearly \$53,000,000 in value having been executed. This permits the issue of additional gold certificates, the issue of certificates against bullion being limited by law to two-thirds of such certificates outstanding. Over 92,000,000 silver dollars were coined during the year from bullion purchased under the terms of the Pittman Act, practically all of these dollars going into storage and being represented in circulation by silver certificates issued against them in lieu of Federal reserve bank notes retired. Retirement of the Federal reserve bank notes permits retirement of certificates of indebtedness held as security against them, thus reducing the public debt and the interest thereon. Of coins below the dollar but few were executed during the past year, those struck being confined to memorial half dollars and a small number of nickel and bronze coins for cleaning up partially completed lots. Approximately 12,000,000 pieces of coin were executed for foreign governments, making the year's aggregate number of pieces executed by the three mints

117,912,205. Working periods of 16 hours and 24 hours per day were again a feature of the year's operations, incident to the effort to reduce quickly the "dead" stock of Pittman Act silver bullion to an active asset in the form of silver dollars, against which silver certificates could be issued. Silver bullion can not be circulated as cash, nor is it available as a reserve against liabilities or paper currency. While operating on a 24-hour basis the average output reached 1,000,000 silver dollar coins per day—500,000 at the Philadelphia Mint, 280,000 at San Francisco and 220,000 at Denver.

GOLD OPERATIONS.

Large gold receipts at the New York assay office, principally of imported refined bars, totaled some \$480,000,000 as compared with \$562,000,000 during the preceding year.

The value of the gold acquired by the Government at the mints and assay offices during the fiscal year 1922 was \$540,629,997.69; United States coin received for recoinage was of value \$2,491,089.03; transfers of gold between mint offices totaled \$3,574,397.44; giving an aggregate of gold handled by the mint service during the fiscal year 1922 of \$546,695,484.16.

SILVER OPERATIONS.

Receipts of purchased silver were again very large, the total of 54,566,332.02 ounces including 52,671,710.05 ounces of Pittman Act silver costing \$1 per ounce. The average cost of other purchased silver was \$0.658 per fine ounce, its total cost being \$1,248,555.24; the silver received for repayment to the depositors thereof in bars bearing the Government stamp totaled 6,249,499.19 fine ounces; the United States silver coin received for recoinage totaled 1,734,695.72 fine ounces, with recoinage value of \$2,398,058.70; silver deposited in trust by other Governments totaled 5,760,742.21 fine ounces; the transfers of silver between mint service offices totaled 652,533.92 fine ounces, making an aggregate quantity of silver handled by the mint service during the fiscal year 1922 of 68,963,803.06 fine ounces.

Silver purchased under the terms of the Pittman Act, delivered to mint institutions, totaled to June 30, 1922, 117,512,000 ounces, leaving approximately 91,500,000 ounces yet to be acquired; 86,196,979 ounces have been coined into 111,431,473 standard silver dollars, of which 86,730,000 are of the old design. Purchases under the Pittman Act during the two years since they were begun in May, 1920, have totaled somewhat more than the quantity of silver produced from domestic mines during the same period. This is due to the working up of considerable stocks of crude domestic material shown by sworn reports of reduction concerns to have been on hand at the time purchases were commenced. The New York price of silver which does not meet Pittman Act requirements averaged during the fiscal year ended June 30, 1922, \$0.66821; the lowest New York price was at the opening of the fiscal year, 59½ cents; the highest May 22, 1922, 74⅓ cents.

4

1. ALABAMA CENTENNIAL HALF DOLLAR.
2. "PEACE" SILVER DOLLAR.
3. GRANT MEMORIAL GOLD DOLLAR.
4. GRANT MEMORIAL HALF DOLLAR.

DEPOSITS OF GOLD AND SILVER.

The number of deposits received during the past fiscal year, 91,669, exceeded any prior year. Imports of gold and Pittman Act silver purchases account for the high number. Increase is noted of about 50 per cent in number of deposits received at the Boise and Helena assay offices, evidently due to greater prospecting activity; approximately 70 per cent increase at the New Orleans office is noted.

REFINERIES.

Considerably increased production of electrolytically refined gold, and reduction in silver, featured the refinery work of the past year.

NEW COIN DESIGNS.

Four new coins as illustrated on opposite page were issued during the past year.

The "Peace dollar" takes the place of the old design of the standard silver dollar, which was first issued in 1878. This coin commemorates the declaration of peace between the United States, Germany, and Austria, exchanges of peace treaty ratifications having been made in Berlin on November 11, 1921, and in Vienna on November 8, 1921, and peace having been proclaimed by the President of the United States on November 14 and 17, 1921, respectively. No special congressional authority was required for the change in design of the silver dollar, since the law permits changing the design of any of our coins not more frequently than once in 25 years. The design of the "Peace dollar" was selected by the Fine Arts Commission from models submitted by a number of prominent sculptors, and is the work of Anthony de Francisci. On the obverse is a female head emblematic of Liberty, wearing a tiara of light rays, and the word "Liberty"; on the reverse is an eagle perched on a mountain top, holding in its talons an olive branch, witnessing the dawn of a new day; the word "Peace" also appears. Other mottoes and inscriptions are as required by the coinage laws. The design for the silver "Peace dollar" was approved in December, 1921, and 1,006,473 pieces were executed by the close of the calendar year. Subsequent coins of this design will bear the year in which made. At the close of the fiscal year on June 30, 1922, a total of 24,701,473 of the new design coins had been struck.

The Alabama centennial half dollar bears on one side portraits of the first governor of Alabama and of the present governor of the State; also 22 stars, indicative of the twenty-second State of the Union; the reverse is an adaptation of the seal of the State, an eagle standing on the shield, holding arrows in its talons, with the motto "Here we rest," and the dates "1819-1919."

The Ulysses S. Grant centennial half dollar bears on one side a strong profile portrait of General Grant and on the other side a sketch of the historic log cabin in which he was born.

The Ulysses S. Grant centennial gold dollar is a reproduction in miniature of the half dollar, the only change being the value of the coin.

COINAGE.

The domestic coinage of the fiscal year 1922 was of value \$145,712,742, namely, \$52,990,000 in gold double eagles; \$10,016 in Grant memorial gold dollars; \$92,388,473 in standard silver dollars (67,687,000 old design, 24,701,473 new design); \$160,093 in subsidiary silver, consisting of \$50,026.50 landing of the pilgrims tercentennial half dollars, \$25,014 Missouri centennial half dollars, \$35,022 in Alabama centennial half dollars, and \$50,030.50 in Grant memorial half dollars; \$72,350 nickel; and \$91,810 bronze coin. The coinage other than domestic, totaling 11,916,030 pieces, included, at the Philadelphia Mint, 16,030 gold pieces for Costa Rica, 3,900,000 silver pieces for Venezuela, and 3,000,000 silver pieces for Colombia; at the San Francisco Mint, 5,000,000 silver pieces for Indo-China.

The seigniorage on United States coinage executed totaled \$21,088,524.79, of which \$20,919,928.83 was on standard silver dollars, \$40,661.82 was on subsidiary silver coins, and \$127,934.14 was on nickel and bronze coins.

STOCK OF COIN AND BULLION IN THE UNITED STATES.

On June 30, 1922, the estimated stock of domestic coin in the United States was \$1,515,774,608, of which \$863,389,318 was gold, \$381,174,404 was silver-dollar coin, and \$271,210,886 was subsidiary silver coin.

The stock of gold bullion in the mints and assay offices on the same date was valued at \$2,850,230,389.14, a gain over last year of \$441,548,342.54, and the stock of silver bullion was 44,334,061.59 fine ounces, a decrease over last year of 15,412,137.2 ounces.

PRODUCTION OF GOLD AND SILVER.

The production of gold and silver in the United States during the calendar year 1921 was as follows: Gold, \$50,067,300, a reduction from last year of \$1,119,600, and silver, 53,052,441 fine ounces, a reduction from last year of 2,309,132 ounces.

INDUSTRIAL ARTS.

The amount of gold consumed in the industrial arts during the calendar year 1921 was \$50,674,270, of which \$23,050,332 was new material. Silver consumed amounted to 35,867,946 fine ounces, of which 28,843,628 fine ounces were new material.

IMPORT OF GOLD COIN.

The net import of United States gold coin for the fiscal year ended June 30, 1922, was \$1,774,498.

ESTIMATES FOR THE FISCAL YEAR 1924.

Total appropriation estimates for the mint service for the fiscal year 1924, including the office of the Director of the Mint, amount to \$1,383,390. The appropriations for the year 1923 amount to \$1,361,950.

APPROPRIATIONS, EXPENSES, AND INCOME.

The appropriated amounts available for mint service uses during the fiscal year 1922 totaled \$1,791,527.65; reimbursements to appropriations for services rendered amounted to \$548,407.20, making an available total of \$2,339,934.85.

The expenses chargeable to appropriations were \$2,070,485.21; those chargeable to income, \$4,120.89; total, \$2,074,606.10.

The income realized by the Treasury from the mint service totaled \$22,189,212.69, of which \$21,088,524.79 was seigniorage. It should be noted however, that the seigniorage on the coinage of silver dollars, which amounted to \$20,919,928.83 for the fiscal year 1922, merely offsets an equal loss which was incurred when silver dollars were melted and sold under the terms of the Pittman Act.

ADDITIONS AND IMPROVEMENTS.

At the Denver Mint the inspection pit under the main storage vault was converted into a subvault, capable of holding 30,000,000 standard silver dollars, thus meeting the urgent need for additional vault space.

At the Philadelphia Mint two new rolling mills were completed in the machine shop and placed in commission in the rolling room. These additions materially add to the mint's rolling capacity. Two coining presses, as well as numerous other mechanical devices, are under way in the machine shop. It has been clearly demonstrated that the indirect arc type of electric furnace is uncertain and unsatisfactory for alloying the precious metals. Oxidation is constantly to be guarded against, and the absorption of silver by lining of hearth causes the production of a different alloy from figured standard. Alloyed metal, where fineness is so carefully checked by assay, should be melted in a crucible type of furnace free from absorption and direct effect of generated heat.

INCOME AND EXPENSES OF THE FISCAL YEAR, 1922.

Earnings:		INCOME.
Credited to appropriations—		
Charges on foreign coinage executed.....	\$119,728.75	
Silver dollar coinage costs, from special fund.....	398,238.15

PURCHASE OF MINOR COINAGE METAL FOR USE IN DOMESTIC COINAGE.

During the fiscal year 1922 there was purchased for delivery at the Mint at Philadelphia 584,892.37 troy ounces of minor coinage metals at a cost of \$5,665.24 as follows:

Metal.	Troy ounces.	Cost.
Copper, ingot.....	583,333.33	\$5,650.00
Mutilated bronze coin.....	1,173.75	11.28
Mutilated nickel coin.....	385.29	3.96
Total.....	584,892.37	5,665.24

There were no purchases during this year of nickel and bronze blanks prepared for stamping.

DISTRIBUTION OF MINOR COINS.

The only minor coin distributed by the mints during the fiscal year 1922 was approximately \$50,000, from the San Francisco Mint. Distribution costs of the year cover expenses incurred in prior years. The amounts paid were: \$3,746.89 by the Philadelphia Mint and \$251.65 by the Denver Mint; total, \$3,998.54.

MINOR COINS OUTSTANDING.

The following statement shows the coinage of minor coins by denominations since 1793, the amount on hand, issued, melted, and outstanding June 30, 1922:

¹ There is no record of the melting of any of the old copper half cents, but it is believed that few, if any, are now in circulation.

² Deduct \$89.07 value of old coins melted at San Francisco and Denver Mints for the net amount issued and outstanding, \$99,545,500.54. The uncurrent minor coins melted at each mint are not necessarily those of former coinage of the same mint.

OPERATIONS OF THE ASSAY DEPARTMENTS.

PROOF BULLION (1.000 FINE).

In order to establish uniformity in assay of bullion in the offices of the Mint Service, all proof gold and proof silver is made at the mint at Philadelphia and furnished to other offices when required.

The amount made during the fiscal year 1922 was: Gold, 749 ounces; silver, 740 ounces.

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1922.

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1922, was 39.86 million fine ounces of gold and 308.83 million fine ounces of silver. There were also operated upon at the coinage mints 8.7 million ounces of

minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

Net loss.....			125.19			

WASTAGE AND LOSS ON SALE OF SWEEPS.

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1922, was \$13,746.91. A loss of \$6,592.97 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given below:

Item.	Mint at—			Assay office at New York.	Total.
	Philadel- phia.	San Fran- cisco.	Denver.		
Gold wastage:					
Melting and refining department.....	\$875.10	\$792.25			\$875.10
Coining department.....					792.25
Silver wastage:

Reimbursements:					
Nickel and bronze wastage, from minor coinage profits.....	97.51		24.84		122.35
Other wastage and loss on sweeps, from contingent appropriation.....	5,482.09	8,508.41	4,901.03	1,326.00	20,217.53
Total reimbursements.....	5,579.60	8,508.41	4,925.87	1,326.00	20,339.88

ENGRAVING DEPARTMENT.

The demand for coinage dies was not so great as in former years, since but few coins below the dollar denomination were executed. However, the die department made 250 master dies and hubs for Army and Navy insignia and Marine Corps and Coast Guard Service medals. It was decided that the originals for this work should be

engraved at the mint, so that a uniformity in the finished work would be assured.

The Verdun gold medal (4 inches in diameter), presented by the United States to the city of Verdun, was made in this department. The medal was cut in gold on the reproducing lathe from models supplied by the United States Fine Arts Commission.

The dies for the peace dollar were made from models approved by the same commission, and over 1,000,000 pieces were struck in 1921. Before the dies for the 1922 issue were finally ready considerable experimenting to reduce the relief was necessary because of the extreme difficulty in coinage.

DIES MANUFACTURED.

For—	Unused.	Issued to mint at—				Total prepared.
		Phila- delphia.	San Francisco.	Denver.	Manila, P. I.	
Domestic:

MEDALS MANUFACTURED.

The medal division manufactured 30,017 medals of a national character during the year, of which bronze good-conduct medals for the Marine Corps and rifle and pistol competition medals for the Army form a large proportion. The number includes 243 gold and 671 silver medals, also 4,762 bronze medals for sale to the public at approximate cost price, at the Philadelphia Mint.

MEDALS SOLD.

Medals manufactured at the mint at Philadelphia were sold during the fiscal year, as follows:

Items.	Pieces.	Value.
Gold medals.....	179	\$6,332.94
Silver medals.....	439	980.07
Bronze medals.....	5,378	3,062.92
Total.....	5,996	10,375.93

PROGRESS OF NUMISMATIC COLLECTION.

Owing to the sudden passing away on July 3, 1922, of the curator of the numismatic collection, Dr. Louis T. Comparette, definite report of the progress made in this line during the past year is not available. Accessions to the numismatic collection were not numerous, but Doctor Comparette had commenced and was far advanced in the work of collecting from all parts of the United States specimens of medals awarded to returned soldiers. It was his intention to gather as complete a collection of these medals as could be had, and it is anticipated that this work will be carried on by his successor. Doctor Comparette assumed the duties of curator in 1905, and during the 17 years of his incumbency materially improved the collection in both number of pieces and in acquisition of those having historical and numismatic value. While the numismatic collection had its inception in 1838, Doctor Comparette was its first formally recognized curator.

EMPLOYEES.

The total number of officers and other employees of the institutions of the Mint Service on June 30, 1922, was 744, as below:

Institution.	Departments.					Total.

ORE ASSAYS.

A comparative statement of ore assays made at the minor assay offices since 1915 shows increased use of our facilities by the mining industry as the result of reducing our charge for this service to a nominal sum. The increased number of assays in 1921 and 1922 seems to indicate revival of prospecting, doubtless incident to the slowing down of business in other lines.

Fiscal year.	Ore assays made.	Amount of charges collected.
1915.....		
1916.....	1,404	\$885.65
1917.....	2,318	1,678.00

LABORATORY OF THE BUREAU OF THE MINT.

During the calendar year 1921 the assayer of this bureau tested 618 silver coins and 64 gold coins, all of which were found within the legal requirements as to weight and fineness.

The greatest deviation in fineness of silver coins above standard (the limit of tolerance being 3 above or below) was 2.4, while the greatest deviation below was 2.0.

The greatest deviation in fineness of gold coins above standard (the limit of tolerance being 1 above or below) was 0.4, while the greatest deviation below was 0.3.

The work of testing certificate bar assaying throughout the service was continued.

The following table summarizes results of domestic coin tests:

Fineness.	Number of silver coins.				Fineness.	Number of gold coins.		
	Phila- delphia.	San Fran- cisco.	Denver.	Total.		Phila- delphia.	San Fran- cisco.	Total.
898.0	1			1	899.7	7	3	10

902.2	1			1				
902.4				1				
Total	266	152	200	618	Total	48	16	64
Average fineness	899.973	900.136	900.41	900.154	Average fineness	899.935	899.844	899.912

During the fiscal year a number of improvements were made in the laboratory; these included the installation of a large alberene stone worktable and a two-unit Braun electrolytic cabinet. The assay furnaces have been faced with unglazed white tile and the use of nichrome muffles adopted.

DISEASE NOT CARRIED BY COINS.

Tests made for the purpose of determining whether coins carry disease show that, on the contrary, the coinage metals destroy the bacteria which reach them. The results of the tests are given in the following quotation from the New York Journal of Commerce of date December 29, 1921:

There seems to be little basis for the belief that coins bear any close relation to the spread of disease, according to an announcement made at the University of Illinois here by Drs. Charlotte B. Ward and Fred W. Tanner, of the university, following a series of tests made by the two.

"Coins of the lower denominations were examined for the types of bacteria which exist on them," says their report. "It has often been stated that money is a very dangerous article of commerce since it is handled by all sorts of persons and because it usually moves so quickly from one person to another. It has also been stated that cashiers and others whose vocations require them to handle money in larger quantities than the average person, might be more susceptible to disease, but this does not seem to be the case.

"It seems that the very metals from which the coins are made act to destroy the bacteria which reach the coins. In the study only the more resistant of bacteria, the spore-forming bacteria, were found. This indicates that money need not be feared, for bacteria can not live long on it."

Doctors Ward and Tanner have pointed out that postage stamps have somewhat the same relation to the public that money does, although their constitution is quite different from that of coins. Stamps are used but once and are not handled by so many

individuals, although the adhesive applied to them might be a favorable abode for micro-organisms for relatively long periods of time. Nevertheless, the menace is not regarded as a threatening one, and in an investigation conducted some years ago with reference to the question here at issue, pathogenic bacteria were rarely found on stamps.

● ASSAY COMMISSION'S ANNUAL TEST OF COIN.

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during the prior year, by a commission of whom part are ex officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission, which met at the Philadelphia mint February 8 to 10, 1922, reported the following results of their examination:

Your committee on counting reports that the packages containing the pieces reserved by the several mints for the trial of coins, in accordance with section 3539 of the Revised Statutes, were delivered to us by the superintendent of the mint at Philadelphia and upon comparison with the transcripts kept by the Director of the Mint were found to be correct. Several packages were selected from the deliveries of each month from each mint of all denominations coined, and the coins contained therein were counted and found to agree with the number called for in each package. The reserved coins were then delivered to the committees on weighing and assaying.

The committee on weighing have to report that they have weighed the coins shown in an appended list and have found them to be standard within the legal tolerances. The coins were selected at random from those reserved by the mints at Philadelphia, San Francisco, and Denver. The coins were directly weighed against a set of sealed coin weights which were accompanied by a certificate signed by the Director of the Bureau of Standards, Department of Commerce, and which gave the value of the weights in terms of the United States standard. The weighings were made on a Troemner balance supplied by the Philadelphia Mint, which was tested by your committee as to the equality of the arms and as to its sensibility, which was entirely satisfactory.

The committee on assaying has completed the assays on samples taken from different lots of coin representing all denominations coined during the year 1921 by the United States mints at Philadelphia, San Francisco, and Denver. The mint at Philadelphia was the only mint to coin gold during the year 1921, double eagles being the only denomination coined. The highest assay upon the individual samples of double eagles taken was 900.5; the lowest 899.6, showing the coinage to be well within the legal limit of tolerance, which is one-thousandth for gold coin, standard being 900. The highest assays upon individual silver coins representing lots delivered by the mints during the year 1921 are Philadelphia 900, San Francisco 900.4, Denver 900.2. The lowest assays upon silver coined at the three mints during the year are Philadelphia 898.2, San Francisco 898.9, Denver 898.6. The result of the assays upon coins from the mints is very satisfactory, being well within the legal limit of tolerance, which is three one-thousandths for silver coin. The assay balances were tested and found to be in adjustment; the nitric acid used for humid assays of silver was tested and found to be free from chlorine and the silver used in parting was free from gold.

ASSAY OF COINS MELTED IN MASS.

Philadelphia, gold, 105 double eagles, fineness, 899.8.

Philadelphia, silver, 170 standard dollars, 14 half dollars, 50 quarter dollars and 20 dimes, fineness 899.6.

San Francisco, silver, 88 standard dollars, 8 half dollars, fineness 899.3.

Denver, silver, 100 standard dollars, 2 half dollars, 4 dimes, fineness 899.5.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1922, is respectfully submitted.

F. E. SCOBEE,
Director of the Mint.

HON. ANDREW W. MELLON,
Secretary of the Treasury.

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND
SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR
1921.

REPORT FOR

PART II

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1921

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1921.

INTRODUCTION.

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Geological Survey, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the survey. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1921 is estimated to have been \$50,067,300, and the production of silver is estimated at 53,052,441 fine ounces. A comparison of these figures with those for 1920 indicates decrease of production of both gold and silver, the former by approximately 1.1 million dollars and the latter by approximately 2.3 million ounces.

The only State which shows a materially increased output of gold is South Dakota, such increase being in round amount 2.2 million dollars in value. The greatest decrease was in Arizona, 1.6 million dollars, followed by Alaska with one-half million dollars and Nevada with \$400,000.

Of silver output Utah's increase of 2.3 million ounces was greatest, followed by California with 2 million ounces and Colorado with 1.1 million ounces. Large silver decreases are shown for Montana, 3.6 million ounces, and for Arizona, 2.9 million ounces, Nevada following with one-half million ounces.

A brief review of mining conditions, for which acknowledgments are made to the United States Geological Survey, follows; further information concerning same can be obtained by those interested by addressing the survey, in Washington.

ALASKA.

Alaska mines in 1921 produced gold valued at \$8,073,540, compared with an output of \$8,365,560 in 1920. This reduction was due to the great depression in gold mining throughout the world. The value of silver produced in Alaska in 1921 was \$761,085, or \$278,279 less than in 1920.

In 1921 about 47.5 per cent of the total gold production came from lode mines, compared with 53 per cent credited to lode mines in 1920, and 46.6 per cent in 1919.

The auriferous lode mines produced during the year gold valued at \$3,818,226, and silver valued at \$99,515. Sixteen gold lode mines and eleven prospects were operated in Alaska in 1921.

The copper ores contained \$27,471 in gold and 545,229 fine ounces of silver, valued at \$545,229. The value of the placer gold produced in Alaska in 1921 was about \$4,226,000, compared with an output of \$3,873,000 in 1920. In 1921 there was a marked improvement in the placer mining industry, which was expressed not only by an increase of about 9 per cent in the gold output but also in the number of large placer mining projects that are under way. This revival is due to a general lowering of costs in the more accessible districts, though the costs are still very high. A considerable number of the smaller placer mines are being operated at a loss. In general the outlook is favorable for an increase of placer gold output in 1922. It is estimated that about 555 placer mines were operated in the summer of 1921 and about 112 during the previous winter, but many for only a part of the season.

Twenty-four gold dredges were operated in Alaska in 1921, compared with 22 in 1920. These dredges handled about 2,799,519 cubic yards of gravel and produced gold valued at about \$1,582,520. In 1920 dredges handled about 1,633,861 cubic yards of gravel and recovered gold worth \$1,129,932. The average gold recovery per cubic yard was about 67 cents in 1921 and 66 cents in 1920. Up to the end of 1921 gold to the value of \$23,107,452 had been mined by dredges.

ARIZONA.

The gold production by mines in Arizona in 1921, according to V. C. Heikes, of the United States Geological Survey, had a value of \$2,930,303, a decrease of \$1,855,819 from that of 1920. Metal production was unusually small in 1921, as most of the large copper mines were forced to close early in the year on account of the poor market for copper. The largest part of the gold, or \$2,340,444, had its source in bullion from ore treated by amalgamation or cyanidation. Crude ore shipped directly to smelters contained \$477,493, and concentrates, \$96,189. The gold from deep mines was derived from the following sources: Siliceous ore, \$2,407,396; copper ore, \$449,244; lead ore, \$60,933; and copper-lead ore, \$206. More than 97 per cent of the State's gold came from copper ore and siliceous ore combined. Placers produced only \$12,524 in gold.

The silver output amounted to 2,469,394 ounces, a decrease of 2,885,909 ounces, or nearly 54 per cent. The value of the output decreased \$3,367,886, partly on account of the price, which was \$1 per ounce in 1921. The sources of the silver output were as follows: Siliceous ore, 580,349 ounces; copper ore, 1,241,436 ounces; lead ore, 645,563 ounces; and copper-lead ore, 1,956 ounces.

There were 215 mines producing during the year, of which number only 37 were placer mines.

CALIFORNIA.

A very material improvement was apparent in both the gold and silver mining industries in California in 1921, as compared with the discouraging conditions of 1920, according to Charles G. Yale, of the United States Geological Survey, who annually reports on the precious metals mined in that State. The output of deep-mine gold increased about 4 per cent, but placer gold increased 15 per cent. The deep-mine silver output increased 114 per cent, while the increase from placers was merely nominal.

Costs of mining all the metals still continued higher than the normal rate, resulting in curtailment of operations among the larger mines and keeping many smaller ones entirely idle. Therefore, few new enterprises of magnitude have been inaugurated, and no more money than absolutely necessary has been spent in new equipment or prospecting new ground. Smaller crews than usual have been employed, and few among even the larger properties have been worked much above 65 to 70 per cent of full capacity.

There were 573 metal mines of all kinds reporting production in California in 1921, which is 73 more than in 1920. The 294 deep mines producing in 1921 may be classified by chief metallic product as follows: Gold, 270; copper, 4; lead, 19; zinc, 1. Among those thus classified as gold mines (siliceous ores) are a number of purely silver mines. Of the deep mines there were 14 less gold mines, 6 less copper, and 15 less lead than in 1920. Of the 279 placer mines reporting production, 60 were hydraulic, 35 dredges, 59 drift, and 125 surface or sluicing mines. In 1921 there were 9 more hydraulic mines, 5 less dredges, 14 more drift, and 62 more surface or sluicing mines than in 1920. The dredges are enumerated by the number of boats at work, some companies operating one and others several.

The total gold produced in California in 1921 was \$15,704,822, which is \$1,393,779 more than in 1920. The gold from deep or quartz mines amounted to \$7,549,998 and the placer gold was \$8,154,824. The outstanding feature of the gold-mining industry in California in 1921 is that the auriferous gravels yielded more gold than did the quartz. The gold yield of the dredges in 1921 was \$7,756,787; of the hydraulic mines, \$162,808; of the drift mines, \$127,411; and of the surface or sluicing mines, \$107,818.

Of the deep-mine gold 99 per cent was derived from siliceous ore. Of the placer gold the dredges yielded \$856,421 more than in 1920. From 1898, when gold dredging began in California, to the end of 1921, the gold output from that source has been \$124,992,984.

The placer mines produced 52 per cent of the total gold yield in 1921 and the deep mines 48 per cent, as compared with 49 per cent and 51 per cent in 1920. The dredges produced 49 per cent of the total gold from all sources in 1921.

The production of silver in California in 1921 was the largest recorded in years, amounting to 3,629,223 fine ounces, valued at \$3,629,223, which is an increase over 1920 of 1,922,896 ounces. The 902,566 tons of siliceous ore treated in the State in 1921 included 29,846 tons of silver ore from purely silver mines, yielding \$184,989 in gold and \$3,228,340 in silver. The silver-mining industry of the State shows marked and increasing improvement.

COLORADO.

The mines of Colorado in 1921, according to Charles W. Henderson, United States Geological Survey, Department of the Interior, produced \$6,835,328 in gold and 5,631,657 ounces of silver. These figures show a decrease of \$740,991 for gold, but an increase of 222,322 ounces for silver. However, because of the lower average price for silver the value of this metal showed a decrease.

A number of Colorado's mines and reducing plants were either closed for the entire year or operated only a part of the time or at reduced capacity.

Teller County (Cripple Creek), after the heavy setback of 1920, experienced a revival in 1921, owing to the return of many former lessees, who commenced operations on dumps and began to develop former producing properties, but the results were not apparent in the output, which was \$4,291,883 in gold in 1921, as compared with \$4,323,998 in 1920.

San Miguel County, in the San Juan region, materially increased its output of gold and silver, owing to the continuous development of milling ores and steady operation of the Smuggler Union mill, the Tomboy's flotation mill, and the Belmont-Wagner property, near Telluride.

Three dredges at Breckenridge and small hydraulic operations yielded \$337,980 in placer gold, as compared with \$374,000 from four dredges in 1920.

Eagle County (Red Cliff) shipped a large quantity of silver-copper-iron ores. The production of silver in Boulder County was 112,957 ounces as compared with 148,834 ounces in 1920, and Mineral County (Creede) produced 192,468 ounces of silver as compared with 272,322 ounces in 1920.

CENTRAL STATES.

Only three of the Central States—Michigan, Missouri, and Illinois—produced silver in 1921. The total production was 381,974 fine ounces, against 589,516 ounces in 1920. Of the total production of silver, 310,727 ounces came from the copper lodes of Michigan, a decrease of 159,462 ounces.

The silver production of Missouri was 69,902 ounces, compared with 111,128 ounces in 1920. All the production was derived from the lead ores from southeastern Missouri. From the lead concentrates derived from southern Illinois fluorspar ores only 1,345 ounces of silver was recovered, which was 6,848 ounces less than in 1920.

EASTERN OR APPALACHIAN STATES.

The mine production of gold in the Eastern or Appalachian States increased from 411.91 fine ounces, valued at \$8,515 in 1920, to 480.55 fine ounces, valued at \$9,934 in 1921, of which Georgia produced \$1,022; North Carolina, \$2,179; South Carolina, \$50, Tennessee, \$4,920; and Virginia, \$763. The production from placer mines increased 19.79 ounces and that from deep mines 48.65 ounces. The placer production was that of 12 small mines operated in Georgia, North Carolina, and South Carolina. None of the larger old milling

plants was operated in 1921, but small outputs were made by stamp mills in Georgia, North Carolina, and Virginia. The gold recovered from siliceous ores amounted to 165.58 fine ounces, and all the gold recovered from copper ores, 238 fine ounces, was from copper mines in the Ducktown district in Tennessee. The mine output of silver was 98,792 fine ounces, a decrease of 23,487 ounces compared with that of 1920. All the silver, except 30 ounces, which came from placer bullion and siliceous ores, was derived from the copper ores of Tennessee.

Value of estimated production of gold in the southern Appalachian States, 1799-1921, by States.

Alabama.....	\$766,632
Georgia.....	17,826,290
Maryland.....	71,405
North Carolina.....	23,632,759
South Carolina.....	5,181,892
Tennessee.....	269,422
Virginia.....	3,297,332
Total.....	51,045,732

IDAHO.

In 1921 the gold output of Idaho mines was valued at \$545,731, and silver output at \$6,080,528, according to C. N. Gerry, of the United States Geological Survey.

Gold increased from \$485,590 in 1920 to **\$545,731** in 1921. Of this total the placer gold amounted to \$181,600, against \$113,814 in 1920. The gold won by dredges was valued at \$151,762, an increase from \$101,679 in 1920. Siliceous ore produced more gold than any other kind, or \$285,820. Gold in copper ore was valued at \$26,018; lead ore, \$51,012; and copper-lead ore, \$1,281. In 1921 nearly 76 per cent of Idaho's gold came from placers and siliceous ore. Many of the gold mines in the central part of Idaho were idle in 1921 on account of the high cost of mining and transportation.

The silver output was 6,080,528 ounces, a decrease of 1,246,266 ounces. Most of the output of silver, or 5,688,577 ounces, came from lead ore. Copper-lead ore supplied 317,244 ounces; siliceous ore, 6,386 ounces, copper ore, 23,987 ounces; and placers, 1,686 ounces.

There were 225 mines producing during the year, of which 92 were placer mines and 133 deep mines.

MONTANA.

The gold output of Montana's mines, as reported by C. N. Gerry, of the United States Geological Survey, was valued at \$1,480,763 in 1921, a decrease of \$370,402. Of this total, \$1,253,602 came from deep mines and \$227,161 from placers. Most of the placer gold was won by dredge operations, but production from this source continues to decrease. As in former years, the gold was derived principally from siliceous ore, which was the source of \$979,389. Other sources produced gold as follows: Copper ore, \$97,846; lead-zinc ore, \$90,319; lead ore, \$85,829; and copper-lead ore, \$219. Many of the mines producing low-grade gold ore remained idle, but several have resumed operations since costs have been reduced.

The silver output decreased from 12,579,178 ounces in 1920 to 6,558,713 ounces in 1921, a decrease of 6,020,465 ounces. As the price was \$1 an ounce, an effort was made to mine and treat much of the silver ore and silver-bearing zinc ore of the Butte district.

Separated as to kinds of ore, lead-zinc ore supplied the largest quantity of silver, or 1,968,371 ounces; copper ore took second place with 1,663,472 ounces; siliceous ore followed with 1,546,910 ounces; lead ore produced 1,352,125 ounces; and copper-lead ore, 26,244 ounces.

There were 445 producing mines, of which 348 were deep mines and 97 were placer properties.

NEVADA.

The gold output of Nevada mines in 1921, according to V. C. Heikes, of the United States Geological Survey, had a value of \$3,312,757, against \$3,566,728 in 1920. This decrease of \$253,971 was due in part to the small output from Goldfield in Esmeralda County, which was formerly the largest gold-producing district in the State. The production of gold from the Tonopah district of Nye County was less on account of the labor strike, which prevented successful operations for several months. The Elkor mine at Jarbidge was the largest producer of gold in 1921. Separated as to source, most of the gold, or an amount valued at \$2,755,451, came from siliceous ore. Copper ore supplied gold valued at \$98,134; placers, \$363,142; lead ore, \$95,400; copper-lead ore, \$630.

The production of silver in 1921 was 7,083,782 ounces, against 7,745,093 ounces in 1920, a decrease of 661,311 ounces. The mines of Tonopah, in Nye County, produced most of the silver of the State, 4,623,901 ounces in 1921, against 4,816,055 ounces in 1920. Production from this district had been decreasing, but the price of silver has stimulated development and made possible the treatment of much low-grade ore. The Rochester district produced 667,084 ounces of silver in 1921, the gold Mountain district 364,269 ounces, and the Comstock district 263,931 ounces. Most of the silver of the State, 6,539,514 ounces, had its source in siliceous ore. Silver from lead ore amounted to 496,826 ounces, copper-lead ore, 20,163 ounces; copper ore, 19,323 ounces; and placers, 7,956 ounces.

There were 431 mines producing in Nevada in 1921, of which 61 were placer mines and 370 were deep mines.

NEW MEXICO.

Mines in New Mexico in 1921, according to Charles W. Henderson, of the United States Geological Survey, produced \$196,822 in gold and 571,899 ounces of silver. Comparative figures for 1920 were \$480,302 in gold and 768,042 ounces of silver.

The Pittman Act, fixing the price of silver at \$1 an ounce for silver in domestic ores, allowed the Mogollon Mines Co., at Mogollon, to continue operations during the year. Other silver producers were the reopened mines at Chloride Flat, Grant County, and at Chloride, Lake City, and Kingston, Sierra County. The Mogollon silver district also contributed the bulk of the gold produced in New Mexico. Placer mines at Elizabethtown, Pinos Altos, and Golden yielded in all 401 ounces of gold.

OREGON.

The total production of gold in Oregon in 1921 was \$882,034, which is \$135,456 less than in 1920; and that of silver, 42,120 ounces, or 40,623 ounces less than in 1920. Of the gold, \$403,301 was from deep mines and \$478,733 from placers, these figures showing a material decrease in the output from deep-mining operations and a small increase from placer properties.

According to Charles G. Yale, of the United States Geological Survey, the main reason for the decrease was the almost entire cessation of copper mining, from which, in addition to the copper, more or less gold and silver are derived. Several of the larger mines, among the deep ones, continued to remain idle and unproductive, and only a few new mines of any importance were started up and began production in 1921.

There were 107 mines that reported production in 1921, of which 23 were deep mines (22 gold and 1 copper) and 84 were placers.

The southwestern counties in Oregon had a combined output of \$163,875 in gold and \$950 in silver, a total of \$164,825. The production of placer gold in this region in 1921 was \$75,763, an increase of \$22,767, and the production of gold from deep mines was \$88,112, an increase of \$83,858.

The yield of gold in northeastern Oregon was \$718,159, of which Baker County produced \$605,465; this was a decrease of \$242,081 for the district. The lode mines produced \$315,189 in gold and the placers \$402,970. The total silver was \$41,170. In this region there were 22 productive mines in Baker County, 12 in Grant, 7 in Malheur, and 3 in Wheeler.

The idleness of the largest copper mines in Oregon was the main cause of the material reduction of about 100 per cent in the value of silver produced in 1921, as compared with 1920, though some loss is also shown from the siliceous ores.

The placer mines of the State produced \$478,733 in gold in 1921, which is \$27,616 more than in 1920. The hydraulic mines produced \$88,312, or \$292 less than in 1920; the dredges, \$381,960, or \$23,096 more; and the surface placers, \$8,461, or \$4,812 more. Three of the dredges operated in Baker County and one in Grant County.

SOUTH DAKOTA.

The Homestake mine and mills, at Lead and Deadwood, S. D., began the year 1921 with increased activity and in April were working at almost full capacity, according to Charles W. Henderson, of the United States Geological Survey, Department of the Interior. From May the operations continued at full capacity throughout the year. The Trojan mine and mill were in continuous operation throughout the year.

The production of gold in South Dakota for 1921 was \$6,605,167 as compared with \$4,676,470 in 1920, and the production of silver increased from 90,795 ounces to 112,464 ounces.

TEXAS.

Only one mine, the Presidio silver mine, at Shafter, was productive in 1921. This mine has produced the greater part of the silver output of Texas from 1885-1921.

UTAH.

The value of the mine production of gold in Utah in 1921 was \$1,769,905, a decrease of \$244,651 from that of 1920, according to V. C. Heikes, of the United States Geological Survey. Of this total, Salt Lake County produced \$962,012 in gold and Juab County produced \$332,938. Separated as to source, siliceous ore contained gold valued at \$610,938; copper ore, \$297,359; lead ore, \$860,536; and copper-lead ore, \$658.

The silver output of Utah decreased from 13,106,976 ounces in 1920 to 12,251,998 ounces in 1921, or 854,978 ounces. Separated as to source, the silver came principally from siliceous ore, which supplied 6,088,635 ounces. Lead ore supplied 5,893,497 ounces; copper ore, 229,556 ounces; and copper-lead ore, 40,309 ounces. The Tintic district, in Juab and Utah Counties, produced 7,577,202 ounces, against 6,884,740 ounces in 1920. The Bingham district of Salt Lake County produced 973,984 ounces, and the Park City region, in Summit and Wasatch Counties, 2,187,236 ounces.

There were 138 producing properties in 1921, of which 4 were placer mines.

WASHINGTON.

In Washington in 1921, according to C. N. Gerry, of the United States Geological Survey, the gold output had a value of \$128,486, an increase of \$7,626. The only important production of gold came from Ferry and Whatcom Counties. The Republic district of Ferry County produced gold valued at \$87,090. Most of the gold of the State, or \$124,349, came from siliceous ore, principally from the Republic district. Since 1860 Washington has produced \$28,255,558 in gold.

The silver output in 1921 was 142,450 ounces, a decrease of 57,228 ounces. Of the total silver, 65,716 ounces had its source in copper ore, 68,991 ounces came from siliceous ore, and 7,695 ounces from lead ore.

There were 11 placers and 26 deep-producing mines.

WYOMING.

A car of copper-silver ore from the old Rambler mine at Albany and one from the Copper Bottom mine at Guernsey were the only shipments of mineral-bearing ore from Wyoming in 1921. No copper ore was shipped from the Sunrise iron mine at Hartville, from which a very considerable quantity of high-grade copper ore, carrying silver, was shipped during 1915-1919.

REFINERY PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES
IN 1921.

The Bureau of the Mint, with the cooperation of the Geological Survey, has issued the following statement of the final estimate of refinery production of gold and silver in the United States during the calendar year 1921:

State or Territory.	Gold.		Silver.
	Ounces.	Value.	Ounces and value. ¹
Alaska.....	386,927	\$7,998,500	753,999
Alabama.....	4	100	4
Arizona.....	160,498	3,317,800	2,519,200

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES SINCE 1792.

The production of gold and silver from the *mines* of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Production of gold and silver in the United States from 1792 to 1844 and annually since.

[The estimate for 1792-1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint.]

Calendar years.	Gold.		Silver.

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1921.

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1921, with the class of material from which they were made:

Gold and silver issued for use in the industrial arts during the year ended Dec. 31, 1921.

Material used.	Gold issued (value).			Silver issued (weight).		
	Government institutions.	Private refineries.	Total.	Government institutions.	Private refineries.	Total.
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Fine ounces.</i>	<i>Fine ounces.</i>	<i>Fine ounces.</i>
Bullion, old plate, etc.....	42,456,792	4,717,478	47,174,270	911,811	34,878,791	35,790,602
United States coin.....		378,441	378,441		844	844
Total.....	42,456,792	5,095,919	47,552,711	911,811	34,879,635	35,791,446

Estimating that the total amount of gold coin used in the arts during the calendar year 1921 has been \$3,500,000, and silver coin \$100,000, equivalent to 77,344 fine ounces, the total industrial consumption of gold was \$50,674,270, and of silver 35,867,946 fine ounces.

In order to arrive at the net consumption in the arts there should be deducted from the foregoing totals the amount of old jewelry, plate, etc., included in the private refinery returns and also the same class of material returned to monetary use. In the year 1921 these amounts aggregated \$27,623,938 in gold and 7,024,318 fine ounces in silver, which leaves as the net amount of new material devoted to industrial use, \$23,050,332 gold and 28,843,628 fine ounces silver.

Gold furnished for use in manufactures and the arts and classification of the materials used, by calendar years, since 1880.

LOSSES AND GAINS ON WITHDRAWN COIN.

The loss on face value of gold coin totaling \$2,518,077 withdrawn from circulation during the fiscal year 1922 was \$26,988.60, of which \$1,201.15 was reimbursable from the appropriation provided for that purpose. The loss on face value of silver coin totaling \$2,571,425.12 withdrawn from circulation was \$173,366.44, all being reimbursable from the appropriation provided. The reimbursable loss, provided for by appropriation, on minor coin totaling \$92,672.99 withdrawn during the fiscal year was \$5,009.93.

Standard silver dollars (mutilated), purchased as bullion for use in the manufacture of subsidiary silver coin (since 1883).

¹ Does not include silver bullion (a potential monetary asset) to the value of \$44,334,062, nor nickel and bronze coin, the value of which depends almost exclusively upon the Government impression rather than intrinsic metallic value or a specific reserve.

² Does not include gold bullion or foreign coin outside of vaults of the Treasury. Federal reserve banks, and Federal reserve agents.

³ These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

⁴ The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

⁵ This total includes \$17,249,719 of notes in process of redemption. \$178,459,108 of gold deposited for redemption of Federal reserve notes, \$6,415,374 of lawful money deposited for redemption of Federal reserve bank notes, \$14,251,012 deposited for redemption of National bank notes, \$31,080 deposited for retirement of additional circulation (act of May 30, 1908), and \$7,445,647 deposited as a reserve against postal saving deposits.

⁶ Population of continental United States (estimated) June 30, 1922, 109,743,000; June 30, 1921, 108,087,000; Apr. 1, 1917, 103,716,000; July 1, 1914, 99,027,000; Jan. 1, 1879, 48,231,000. NOTE.—Gold certificates are secured dollar for dollar by the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars, held in the Treasury. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Federal reserve bank notes and national bank notes are secured by United States Government obligations, and a 5 per cent fund for their redemption is required to be maintained with the Treasurer of the United States in gold or lawful money.

Cash holdings of national banks.

Reports to the Comptroller of the Currency of cash holdings on June 30, 1922, of the national banks (8,249 banks) give:

Gold coin.....	\$20,438,000
Standard silver dollars.....	7,771,000
Subsidiary silver and minor coin.....	27,114,000
Gold certificates.....	18,359,000
Silver certificates.....	23,012,000
United States notes.....	24,421,000
National-bank notes.....	61,015,000
Federal reserve and Federal reserve bank notes.....	144,046,000
Clearing-house certificates.....	5,000
Total.....	326,181,000

Cash holdings of nonnational banks.

Reports to the Comptroller of the Currency of 22,658 reporting banks, other than national banks, as of June 30, 1921, show cash holdings as follows:

Items.	Continental United States.	Island possessions.	Total.
Gold coin.....	\$32,974,000	\$974,000	\$33,948,000
Silver coin.....	17,296,000	1,367,000	18,663,000
Minor coin.....	39,237,000	725,000	39,962,000
Paper currency.....	259,366,000	16,609,000	275,975,000
Unclassified cash.....	203,630,000	40,000	203,670,000
Total.....	552,503,000	19,715,000	572,218,000

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

THE COURSE OF GOLD AND SILVER.

The following review of the London market during the calendar year 1921 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

Although in the year just concluded we have had in the silver market many important fluctuations in value, there have not been such extraordinary variations as were recorded last year, nor such a range of prices. Last year we had rates between 38½d. and 89½d., the latter figure affording a record such as has not been seen before, or is hardly likely to be seen again, but the total range this year is very much smaller and, although fluctuations have had their upward and downward tendencies for considerable periods, there have not been those startling changes, or great variations, as we had grown accustomed to in 1920.

The year opened at 41½d. for cash and 41½d. for delivery in two months, the latter being at a slight premium, but this condition was exceptional, and for the most part the premium has been on the side of prompt delivery, the quotation for spot being generally from one-fourth to three-eighths of a penny above that for two months' delivery. On some few occasions when stocks in London were very small, and there was a strong demand for early shipment, a higher premium has ruled, and as much as 2d. per ounce standard has been paid for immediate use above the forward quotation. This took place early in February, but differences of 1d. and ½d. have not been infrequent.

After being quoted 42½d. on the 5th of January the price of silver gradually declined to 34½d. on the 1st of February, but two days later it was as high as 37½d. After this there was a period of depression and the rate fell to 30½d. early in March; then a recovery with a single high quotation of 36½d. on April 12, but with an average for several months of about 34d.

From the middle of June onward prices improved, and gradually worked up to 39½d. toward the end of July, and this level remained fairly constant until the end of September, the highest figure for this period being 43½d. on the 27th of that month.

Prices sagged a little in October, being in the neighborhood of 42d. until the 25th, when 39½d. was recorded but rose again above 41d. before the month was up. Good buying from China then kept the rate steady for a while, but larger continental sales supplied the need, and before the end of the year, with some variations, the price dropped gradually until 34½d. was reached on the 8th of December, largely due to the cessation of the China demand after the departure of the last steamer to reach Shanghai before the Chinese New Year, notwithstanding purchases in America for early shipment from San Francisco to the same destination. The lower level brought in India with good orders for shipment on the 16th and 23d of December, which, together with some covering of short positions, produced a steadier tone with the quotations about 36d., and at the close of the year, with rather less demand from India, the price is quoted 34½d. for cash and 34½d. for forward delivery.

These movements can be better appreciated by the statement following, which shows high and low positions at various dates as the year went on:

	Pence.		Pence.
Jan. 3.....	41½	July 28.....	39½
Jan. 11.....	39½	Aug. 10.....	37
Jan. 20.....	40½	Sept. 27.....	43½
Feb. 1.....	34½	Oct. 24.....	40½
Feb. 3.....	37½	Oct. 29.....	41½
Mar. 5.....	30½	Nov. 12.....	38½
Apr. 12.....	36½	Dec. 8.....	34½
May 20.....	33½	Dec. 17.....	36½

Highest spot silver, 43½d.; lowest spot, 30½d.; average for the year, spot, 368d. Highest two months, silver, 43½d.; lowest two months, 30½d.; average for the year, two months, barely 36½d.

As is usual in the silver market, the greatest demand has been for India, and shipments there have been large, the buying being specially keen when the prospect of a good monsoon was beginning to be realized.

In the early months of the year China was indifferent to silver, and it was the opinion of many at that time that the chances of China being a support to the market were unlikely, and during January and February this proved to be the case. In June and July, however, things became different; short China positions were closed, and some

buying for the Far East began to be noticeable, the result of a suspicion as to the standing of one of the banks there, followed at the end of July by the actual suspension of the Banjue industrielle de Chine in Shanghai.

The effect of this was far-reaching, as China traders, after their recent experience of the depreciation to a vanishing point of ruble notes, became suspicious of all others, even of those which had hitherto commanded respect, and much actual silver cash became necessary to meet the situation.

Thus, purchases for China became large and important, and were the cause of the higher rates for silver during the autumn, in conjunction often with buying for India after the favorable character of the monsoon was established. Even in those cases where the banks in China were strongest, a policy of increasing reserves of metal to meet any possible contingency induced more buying than usual, and the steamers from London to China and other Far Eastern ports, which left here early in November, took over a million sterling of silver to those destinations.

From the point of view of supply, great importance was attached at one time to the quantities of demonetized silver coin obtainable from the Continent of Europe, and very considerable sales from time to time did take place from that quarter, chiefly in the earlier months of the year. Some inferred that these sales would be so large that the market would be unable to absorb them without great reductions in the price, but this fear has proved to be greatly exaggerated, and since the middle of the year, except for a time in early December, the amounts available from continental sources have been much smaller than they were a while ago.

Even the large total sent from Germany to America, as security for loans to meet reparations and other national necessities, has affected prices but little, although some of it has found its way into the market; it is only parted with when rates are exceptionally favorable, and then only in moderate quantities at a time, but whether this policy can be counted upon to continue it is difficult to judge.

The customs returns of silver imported and exported during the year are generalized as follows and show that the latter exceed the former by about a million sterling, besides the considerable amount which has been used in the country for the arts during the same period.

Silver bullion, 1921.

IMPORTS.	EXPORTS.
France, Belgium, and Netherlands..... £3, 490, 000 West Africa..... 2, 100, 000 United States..... 3, 235, 000 Canada..... 805, 000 Other countries..... 1, 022, 500	China..... £3, 717, 000 France, Belgium, and Netherlands..... 485, 000 India..... 6, 205, 000 Other countries..... 1, 550, 000
Total..... 10, 652, 500	Total..... 11, 957, 000

The explanation of this is to be found in the fact that the partial recoining of English silver coin at a lower standard has enabled the authorities to dispose of the metal saved in the process, which is not for sale in the open market, but is available under certain confidential arrangements with particular institutions in special need of the metal.

An attempt to forecast the future in silver is as difficult as ever, but some facts bearing on the subject may be mentioned. The ordinary mining results have been less than formerly, owing to the increased cost of labor and the low price of metals with which silver is associated as a by-product, so that mines are not now working which used to supply large amounts of silver to the market.

This is equally true both in Mexico and Canada, and applies also to some important mines in Australia. Mexico, also, has been using a good deal for currency purposes, as their stock had become largely depleted.

Under the provisions of the Pittman Act in America the whole of the silver obtained from mines in the United States is absorbed by the Government there in replacement of the immense quantity of dollars used to supply the requirements of the Indian Government some time ago, and the effect of these provisions continues, for the amount actually acquired by the Government of the United States for this purpose thus far is only about 86,000,000 ounces against the \$300,000,000 still to be replaced. It will thus be seen that for a year or two more America's supply of silver, such as we used to get continually will not be forthcoming. Sufficient attention to this matter has been to a large extent overlooked, and it may safely be said that if it had not been for the silver obtained from continental demonetization, the scarcity of silver would have

been greatly felt, and it would not have been easy to meet the requirements for the metal without a much greater effect upon market prices.

There is no reason to doubt that the Indian bazaars will continue to require silver as they have always done in the past, especially as a thoroughly satisfactory monsoon has increased the prosperity of the country.

The condition of China, with her great population, is unsatisfactory both politically and economically, but if the endeavors which are being made to put the country in a better condition should be successful, and trade fostered, with security for the productions of an industrious and immense community, there is room there for the absorption of a large amount of silver in the years to come.

Against these influences there is to be put the possibility of further large supplies from those European countries who find the realization of their former currencies a convenient method of obtaining credits for the furtherance of their import trade, but judging from the diminished amount which has been treated in this way for long periods together it would not be safe to expect this influence to expand much, and if some of the exchange difficulties can be overcome, as the world gradually recovers from the effects of the Great War, it is even possible that coining, in some quarters at least, may be resumed.

There only remains to be considered if any large amount of silver will be made available by the action our country took in reducing the quality of the silver coinage. Until now this has not been the case to any considerable extent, and it is a question whether the English Government will persevere in the issue of a miserable silver currency, more debased than that of any other country in the world, and bearing on the face of the coins its degraded standard, but in any case the alteration will take a considerable time, and trouble has been taken to prevent action calculated to depress the value of the metal in India or elsewhere.

It would seem, therefore, that no great alteration from the present moderate level of quotations is likely yet, and that an average price of silver not far below that of the present time may be expected to continue in the near future.

GOLD.

The conditions regulating the sale of gold have remained in force this past year as in the previous one. The supply which is available for export is practically limited to that mined in South and West Africa, about £39,000,000 in all, and the price throughout has varied according to the New York Exchange, rising as the exchange value of the pound sterling fell, and falling as a higher rate was attained. The highest quotation for gold was 115s. 11d. at the opening of the year, but it fell as low as 102s. 8d. in May, recovering again to 115s. 5d. on August 2. Since then exchange with New York has on the whole been improving and gold fell to its lowest point of the year—97/7—on December 21.

A large business in gold has, however, been also done with India, which sent during the year about £9,000,000 on through bills of lading to the United States, this amount figuring both on the import and export sides of the customs returns, but in September and October nearly a million and a half was bought in London and shipped to India, and similar business may be looked for when Indian exchange and the cost of gold are again favorable to this operation.

¹ London quotations on gold were changed in September, 1919, from the standard ounce to a fine ounce basis.

Average commercial ratio of silver to gold each calendar year since 1687.

[NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cablegrams from London to the Bureau of the Mint, from 1897 to 1917 from daily London quotations, and since from daily New York quotations.]

VALUES OF FOREIGN COINS.

The following values, calculated by the Director of the Mint, were proclaimed by the Secretary of the Treasury under the provisions of section 25 of the act of August 27, 1894, as amended by section 403, Title IV, of the act of May 27, 1921, as the basis for estimating the value of foreign merchandise exported to the United States during the quarter beginning October 1, 1922:

Country.	Legal standard.	Monetary unit.	Value in terms of United States money.	Remarks.
Argentine Republic....	Gold.....	Peso.....	\$0.9648	Currency: Paper, normally convertible at 44 per cent of face value; now inconvertible.
Austria.....	do.....	Krone.....	.2026	
Belgium.....	Gold and silver.	Franc.....	.1930	Member Latin Union; gold is actual standard.
Bolivia.....	Gold.....	Boliviano.....	.3893	12½ bolivianos equal 1 pound sterling.
Brazil.....	do.....	Milreis.....	.5462	Currency: Government paper normally convertible at 16 pence (= \$0.3244) per milreis.
British colonies in Australasia and Africa.	do.....	Pound sterling.....	4.8665	
British Honduras.....	do.....	Dollar.....	1.0000	
Bulgaria.....	do.....	Lev.....	.1930	
Canada.....	do.....	Dollar.....	1.0000	
Chile.....	do.....	Peso.....	.3650	Currency: Inconvertible paper.
		Amoy.....	.8322	
		Canton.....	.8297	
		Cheefoo.....	.7960	
		Chin Klang.....	.8130	
		Fuchau.....	.7698	
		Haikwan (customs).....	.8468	
		Hankow.....	.7786	
		Kiaochow.....	.8064	
		Nankin.....	.8235	
		Niuchwang.....	.7804	
		Ningpo.....	.8001	
		Peking.....	.8113	
		Shanghai.....	.7602	
		Swatow.....	.7688	
		Takau.....	.8375	
		Tientsin.....	.8064	
		Yuan.....	.5393	
		Hongkong.....	.5474	
		British.....	.5474	
		Mexican.....	.5514	
China.....	Silver.....			The tael is a unit of weight; not a coin. The customs unit is the Haikwan tael. The values of other taels are based on their relation to the value of the Haikwan tael.
		Tael.....		The Yuan silver dollar of 100 cents is the monetary unit of the Chinese Republic; it is equivalent to 0.644+ of the Haikwan tael.
				Mexican silver pesos issued under Mexican decree of Nov. 13, 1918, are of silver content approximately 41 per cent less than the dollar here quoted; and those issued under decree of Oct. 27, 1919, contain about 51 per cent less silver.
Colombia.....	Gold.....	Peso.....	.9733	Currency: Government paper and gold.
Costa Rica.....	do.....	Colon.....	.4653	
Cuba.....	do.....	Peso.....	1.0000	
Denmark.....	do.....	Krone.....	.2680	
Ecuador.....	do.....	Sucre.....	.4867	
Egypt.....	do.....	Pound (100 piasters).....	4.9431	The actual standard is the British pound sterling, which is legal tender for 97½ piasters.
Finland.....	do.....	Markka.....	.1930	
France.....	Gold and silver.	Franc.....	.1930	Member Latin Union; gold is actual standard.
Germany.....	Gold.....	Mark.....	.2382	
Great Britain.....	do.....	Pound sterling.....	4.8665	
Greece.....	Gold and silver.	Drachma.....	.1930	Do.
Guatemala.....	Silver.....	Peso.....	.5076	Currency: Inconvertible paper.
Haiti.....	Gold.....	Gourde.....	.2000	Do.
Honduras.....	Silver.....	Peso.....	.5076	Currency, bank notes.
India (British).....	Gold.....	Mohur and sovereign.....	4.8665	The British sovereign and half sovereign are legal tender in India at 10 rupees per sovereign.
	Silver.....	Rupee.....	.2412	
Indo-China.....	do.....	Piaster.....	.5482	
Italy.....	Gold.....	Lira.....	.1930	Member Latin Union; gold is actual standard.
Japan.....	do.....	Yen.....	.4985	
Liberia.....	do.....	Dollar.....	1.0000	Currency: Depreciated silver token coins. Customs duties are collected in gold.

Country.	Legal standard.	Monetary unit.	Value in terms of United States money.	Remarks.
Mexico.....	Gold.....	Peso.....	\$0.4985	
Netherlands.....	do.....	Guilder (florin).....	.4020	
Newfoundland.....	do.....	Dollar.....	1.0000	
Nicaragua.....	do.....	Cordoba.....	1.0000	
Norway.....	do.....	Krone.....	.2680

MONETARY LEGISLATION.

[PUBLIC—No. 42—67TH CONGRESS.]

[H. R. 5756.]

AN ACT To amend an act entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for these islands," approved August 29, 1916; and to amend an act entitled "An act to establish a standard of value and to provide for a coinage system in the Philippine Islands," approved March 2, 1903.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the act entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for these islands," approved August 29, 1916, be amended as follows:

That the proviso of section 11 of said act be, and the same is hereby, amended to read as follows: "Provided, however, That the entire indebtedness of the Philippine government created by the authority conferred herein shall not exceed at any one time the sum of \$30,000,000, exclusive of those obligations known as friar land bonds, nor that of any Province or municipality, a sum in excess of 7 per centum of the aggregate tax valuation of its property at any one time. In computing the indebtedness of the Philippine government, bonds not to exceed \$10,000,000 in amount, issued by that government, secured by an equivalent amount of bonds issued by the Provinces or municipalities thereof, shall not be counted."

That for the purpose set forth in section 6 of the act approved March 2, 1903, entitled "An act to establish a standard of value and to provide for a coinage system in the Philippine Islands," the government of the Philippine Islands may issue temporary certificates of indebtedness under the conditions therein provided in addition to the amount therein fixed, to a further amount not exceeding \$10,000,000.

The act of the Philippine Legislature providing for the issue of temporary certificates of indebtedness within the conditions of section 6 of the act of March 2, 1903, entitled "An act to establish a standard of value and to provide for a coinage system in the Philippine Islands," shall apply to the issue of additional certificates authorized by this act.

Approved, July 21, 1921.

[PUBLIC—No. 137—67TH CONGRESS.]

[H. R. 6119.]

AN ACT To authorize the coinage of a Grant memorial gold dollar and a Grant memorial silver half dollar in commemoration of the centenary of the birth of General Ulysses S. Grant, late President of the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purpose of aiding in defraying the cost of erecting a community building in the village of Georgetown, Brown County, Ohio, and a like building in the village of Bethel, Clermont County, Ohio, as a memorial to Ulysses S. Grant, late President of the United States, and for the purpose of constructing a highway five miles in length from New Richmond, Ohio, to Point Pleasant, Clermont County, Ohio, the place of birth of Ulysses S. Grant, to be known as the Grant Memorial Road, there shall be coined in the mints of the United States, Grant memorial gold dollars to the number of ten thousand and Grant memorial silver half dollars to the number of two hundred fifty thousand, said coins to be of a standard troy weight, composition, diameter, and design as shall be fixed by the Director of the Mint and approved by the Secretary of the Treasury, which said coins shall be legal tender to the amount of their face value, to be known as the Grant memorial gold dollar and the Grant memorial silver half dollar struck in commemoration of the centenary of the birth of Ulysses S. Grant, late President of the United States.

That all laws now in force relating to the gold coins and subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material and for the transportation, distribution, and redemption of the coins, for the prevention of debasement or counterfeiting, for security of the coins, or for any other purposes, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided,* That the United States shall not be subject to the expense of making the necessary dies and other preparation for this coinage.

Approved, February 2, 1922.

FOREIGN AND WORLD MONETARY STATISTICS.

The statistics of foreign countries on production, import, and export of gold and silver, coinage and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies, in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where data, other than from the interrogatory replies, are published, the source of the information is stated. Conversion of foreign moneys or values into United States equivalents have been made at the legal par rates unless otherwise stated (in the text).

Revised tables for 1920 and incomplete tables for 1921 are printed, the tables following the other foreign data herewith.

NORTH AMERICA.

CANADA.

Silver coinage executed in home mints for domestic use during the year ended December 31, 1921.

Denomination.	Pieces.	Value.
50 cents.....		<i>U. S. dollars.</i>
25 cents.....	176, 793	88, 397
10 cents.....	575, 268	143, 817
5 cents.....	2, 458, 064	245, 806
	2, 501, 238	125, 062
Total.....	5, 711, 363	603, 082

The amount of domestic silver coin withdrawn from monetary use for recoinage during 1921 was \$168,191.

The estimated quantity of gold and silver (new bullion, old jewelry, plate, etc.) used in the industrial arts during the year 1921 was as follows: Gold, 52,600 fine ounces, valued at \$1,125,000; silver, 480,000 fine ounces, valued at \$295,000.

The amount of gold and silver in the form of old jewelry and dental scrap returned from the industrial arts for coinage during the year 1921 was as follows: Gold, 4,806 fine ounces, valued at \$98,353; silver, 6,930 fine ounces, valued at \$4,336.

The quantity of gold and silver produced from the mines of the country during the year ended December 31, 1921, was as follows: Gold, 924,374 fine ounces, valued at \$19,108,502; silver, 13,134,926 fine ounces, valued at \$8,290,371.

Approximate stock of gold coin and paper money used for monetary purposes on December 31, 1921.

MEXICO BARS FOREIGN MONEY.

[From the Commercial and Financial Chronicle, New York, July 9, 1921.]

Consul C. E. Dawson, at Tampico, reported to the Department of Commerce that a presidential decree has been published prohibiting the circulation of foreign money, excepting gold coin, after July 1, 1921. As American currency is widely used throughout the country, the withdrawal of this money after July 1, it was said, undoubtedly will cause great hardship in business and will result in vast speculation.

CONTINUED RESTRICTION ON THE EXPORTATION OF GOLD.

[Assistant Trade Commissioner R. M. Connell, Mexico City, December 9, 1921, in Commerce Reports, January 16, 1922.]

In order to prevent the exportation from Mexico of national and foreign gold coins and gold in general, the department of hacienda issued a circular on December 5, 1921, revoking the circular of August 26, 1919, and making applicable the decree of June 26 of that same year. The decree of June 26, 1919, provides that exporters of gold bars, of whatever weight, and of minerals and concentrates, of whatever class, when these have a gold weight greater than 2 grams per ton, shall be obliged to reimport into Mexico a quantity of coinable gold bars, or Mexican or foreign gold coins, equal to that contained in the bars, minerals, and concentrates exported.

[The exportation of gold and silver coins of Mexican coinage has been prohibited since August 26, 1913.]

GOLD AND SILVER COINAGE.

[By Consul General Claude L. Dawson, Mexico, March 24, 1922.]

* * * During the year 1921 there were coined 180,400 gold pieces of the 50-peso denomination and 1,277,500 silver pieces of the 2-peso denomination, both of which were struck in commemoration of the centenary of Mexican independence, which

was celebrated in September of last year. * * * The issue of the 50-peso gold piece is authorized for indefinite coinage. This is known as the "Centenario," the local appellation of the coin, in the same way as the 20-peso piece is known as the "Azteca" and the 10-peso piece as the "Hidalgo." These with the 5-peso, 2-peso, 50-centavo, and 2-peso new coins brings the total number of gold pieces in circulation up to six. The 2-peso silver piece becomes the largest in size among the silver coinage of the country, the next the 1-peso known as the "Duro," one-half peso called the "Tostone," 20-centavo piece, and 10-centavo piece. * * * The new gold pieces maintain the well-known reputation of Mexican gold coinage for beauty of design and intrinsic value of the several denominations. The 50-peso and 20-peso coins above referred to have stamped thereon "Pure gold contents," this being $37\frac{1}{2}$ grams for the 50-peso or "Centenario" piece, and 15 grams for the 20-peso or "Azteca" piece.

ESTIMATED GOLD STOCK.

[From Commerce Reports, January 2, 1922.]

The gold stock of the Republic is estimated upon good authority to be between 98,000,000 and 100,000,000 pesos, about 45,000,000 of which are in banks, 25,000,000 hoarded, and 30,000,000 pesos actually circulating.

MEXICAN INFALSICABLE PAPER MONEY RETIRED BY GOVERNMENT.

[By Consul General Claude L. Dawson, Mexico City, June 9, 1922, in Commerce Reports, July 17, 1922.]

Up to December 31, 1921, 509,358,531 pesos of the "infalsicable" paper currency, issued by the Federal Government of Mexico in 1916, have been returned to the national treasury and burned, according to the statement of the controller general of Mexico. In 1917, 146,246,567 pesos were retired; in 1918, 172,038,588 pesos; in 1919, 106,905,026 pesos; in 1920, 73,259,878 pesos; and in 1921, 10,908,473 pesos.

SILVER COIN.

[From Bulletin of the Pan American Union, July, 1921.]

Bringing any silver coin but American into the country is prohibited.

BANK OF EMISSION.

[From Bulletin of the Pan American Union, Washington, November, 1921.]

In accordance with decree No. 40, published July 19, 1921, in the Gaceta, private banks may no longer issue bills to bearer. Therefore the banks were ordered to liquidate their issues of bills within 15 days after the publishing of this decree, and the balance of the issues unpaid on this date were deposited in gold colons in the Banco Internacional de Costa Rica with a statement of the series, numbers, and denominations of the bills represented in the deposit. The Banco Internacional de Costa Rica is now obliged to pay these bills in gold to bearer upon sight, liberating the former banks of issue from all further responsibility. The Banco Internacional de Costa Rica turned over the entire sum of gold colons received as balance of the issues of bills to the Government, charging to the latter's account the value of the bills presented for exchange.

CUBA.

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1921, was as follows: Gold, 2,804 ounces, valued at \$58,890; silver, 200 ounces, valued at \$120.

Approximate stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1921.

Character of stock.	In the treasury.	In banks.	In circulation.	Total used for monetary purposes.

¹ In addition to this, there has been exported copper mineral containing 71,803 ounces of silver (\$43,082).

UNITED STATES \$1 BILLS IN CUBA TO BE REPLACED BY INSULAR CURRENCY.

[From the Commercial and Financial Chronicle, New York, July 30, 1921.]

The signing of a decree by President Zayas, of Cuba, ordering all American bills of \$1 and \$2 denominations to be withdrawn from circulation, if in any way worn or damaged, was reported in advices by cable to the Journal of Commerce from Habana on July 15, which also said: "The bills are to be replaced by Cuban national currency and will be sent to the Federal reserve authorities in Washington to be exchanged for new ones."

DOMINICAN REPUBLIC.

The amount of silver coin imported from the United States during 1921 is estimated at \$1,000,000.

DUTCH WEST INDIES—CURACAO.

Stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1921: Data available only concerning the "Curacaosche Bank." This bank had a stock of gold coin of 250,681 guilders (\$100,774); silver coin, 498,460 guilders (\$200,381); paper money, 35,790 guilders (\$14,388). The total amount of paper money in circulation was 1,174,000 guilders (\$472,229).

Premium on gold: Highest, 28 per cent; lowest, 10 per cent, on American gold. Highest, 8 per cent; lowest, 3 per cent, on British gold.

The import of silver coin from Holland during the year 1921 was 745,700 guilders (\$299,771); and the export of silver coin to Holland was 135,000 guilders (\$54,270).

The coins used in the colony are as follows: Gold coins, 10 florins; silver coins, 2.50, 1, 0.50, 0.25, 0.10 florins; nickel coins, 0.05 florin; copper coins, 0.025, 0.01, 0.005 florin.

Stock of gold and silver, also paper money, used for monetary purposes on December 31, 1920: Data available only concerning the "Curacaosche Bank," which is operated by the Government. This bank had a stock of gold coin of 402,435 guilders (\$161,779); silver, 309,807 guilders (\$124,542); notes issued, 161,913 guilders (\$65,089). The amount of paper money in circulation was 1,534,241 guilders (\$616,765).

Premium on gold: Highest 12 per cent, lowest 3 per cent, on American gold; highest 8 per cent, lowest 3 per cent, on British gold.

The import of Dutch gold coin during the year 1920 was 200,000 guilders (\$80,400).

FRENCH WEST INDIES—GUADELOUPE.

Approximate stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1921.

¹ Held as reserve in French francs.

The actual currency is Guadeloupe paper. There is no premium on gold. There has been neither import nor export of gold and silver during 1921.

FRENCH WEST INDIES—MARTINIQUE ISLAND.

Neither gold nor silver has been imported or exported during 1921.

It is forbidden to purchase or sell gold.

The principal money employed consists of paper currency.

GUATEMALA.

GUATEMALA ISSUES 70,000,000 NICKEL COINS.

[From the Numismatist, Federalburg, Md., September, 1921.]

Nickel coins to the amount of 70,000,000 have been put in circulation by the Government of Guatemala for the purpose of alleviating the shortage of currency occasioned by the withdrawal of gold coins from circulation, according to press advices from Guatemala City dated July 10, which also state that the gold will be used in stabilizing foreign exchange. The Government has announced that the coining of nickel pieces, which is done in accordance with the law recently passed by Congress, will not alter the country's monetary system.

HAITI.

The stock of Government notes used for monetary purposes on December 31, 1921, was as follows: In the Government treasury, 8,730,530 gourdes (\$1,746,106); in circulation, 5,769,470 gourdes (\$1,153,894).

The actual currency consists of unredeemable paper, base nickel, and copper.

HONDURAS.

The quantity of silver produced in 1921 (all sold in the New York market) was 657,250 fine ounces, valued at \$466,956.

Approximate stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1921.

Character of stock.	In home banks.	Held abroad.	In circulation.	Total used for monetary purposes.

Total notes.....	750, 000		1, 272, 000	2, 022, 000

The actual currency consists of United States currency, Guatemalan, Salvadorean, Mexican, Chilean, Peruvian, in fact, all kinds of Central and South American silver.

The export of silver to the United States during the year 1921 was as follows: Coin, \$200,000; bullion, \$466,956.

LAWS AFFECTING THE CURRENCY.

[Interrogatory for 1920.]

In February, 1921, a comprehensive project of monetary reform was presented. This project was rejected by the Congress. However, two emergency laws were passed prohibiting the importation of the formerly current silver coins and requiring the payment of half the customs duties in American money.

By decree No. 60, of February 23, 1921, the importation of coined silver, with the exception of American silver money, is prohibited; the exportation of coined silver, with the exception of American money, is declared free of all national or municipal taxes.

By decree No. 92, of March 12, 1921, 50 per cent of duties of importation and exportation must be paid in United States money at the rate of \$1 for 2 silver pesos.

NICARAGUA.

The total import of United States gold coin during the year ended December 31, 1921, was \$5,000.

The quantity of gold and silver produced from deep mines during the year ended December 31, 1921, was as follows: Gold, 1,536 fine kilos (49,382 ounces), valued at \$1,020,816; silver, 14,463 fine kilos (464,985 ounces), valued at \$293,485.

Approximate stock of silver coin and Government notes on December 31, 1921.

Silver coin.....	264,750	158,011	422,761
Government notes.....	1 5,647,154	1,694,461	7,341,615

¹ This amount is held as reserve stock.

SALVADOR.

The amount of United States gold coin withdrawn from monetary use for industrial purposes during the year 1921 was about 500 fine kilos.

The total import of United States gold coin during the year 1921 was \$650,000 (in \$20 pieces).

Approximate stock of gold coin and paper money used for monetary purposes on December 31, 1921: United States gold coin, furnished by three banks of issue as a guaranty for the local paper, \$2,038,528; notes of banks of issue in circulation, 7,017,820 colones (\$3,508,910).

Premium on gold: Highest, 2.16; lowest, 2.02; average, 2.09.

LAWS AFFECTING THE CURRENCY.

By legislative decree of February 28, 1921, only the national silver coins of 1 colon and 50, 25, 20, 10, 5 centavos, demonetized by article 3 of the legislative decree of September 11, 1919, will have a legal circulation, at the rate of 2 colones to the dollar; the importation of foreign silver coins is forbidden, with the exception of American silver coins, which will continue to enjoy legal circulation, as established by article 10 of the monetary law.

By decree of October 31, 1921, the exportation of gold coin is forbidden until the loan in the United States is contracted.

Exports of gold and silver coin to the United States during the year 1921: Gold coin (not including, of course, the large amount of United States gold currency smuggled out), \$289,204 United States currency; silver, 155,400 colones (\$77,700).

GOLD BASIS FOR SALVADOR.

[From the Numismatist, Federalburg, Md., September, 1921.]

It is reported in a press dispatch from San Salvador that a contract providing for the establishment of a bank for the issuance of currency has been approved by the Salvadoran Congress. The institution, which is sponsored by American capital, will

be established within 90 days, and will have a paid-up capital of \$1,000,000, which may be increased to \$10,000,000. The concession will run for 50 years. Before the bank begins to operate it will import from the United States coined gold to the amount of \$5,000,000. Authorization is given the bank to issue paper money to an amount double that of the paid-up capital. It is believed that the transaction will give Salvador a stable monetary system.

VIRGIN ISLANDS.

The amount of foreign (United States) gold and silver coin withdrawn from monetary use for industrial use during the year 1921 was as follows: Gold, \$2,500; silver, \$250.

Approximate stock of gold and silver in home banks, also of paper money, used for monetary purposes on December 31, 1921: Gold coin, \$183,000; silver coin, \$28,000; notes of banks of issue, \$261,000.

Premium on gold: Highest, 1 per cent to July 5, 1921; henceforth par.

All the coins of the islands had been coined in Copenhagen, Denmark, prior to their transfer to the United States (March 31, 1917).

The amount of gold coin exported to the United States (New York) during 1921 was \$150,000.

SOUTH AMERICA.

ARGENTINA.

DEPRECIATION OF GOLD COIN AND PAPER.

[By Consul Bonney, Rosario, June 14, 1921.]

Argentine gold coin and all gold coin depreciated 10 per cent, due to embargo. Furthermore, Argentine paper is inconvertible and depreciated additional 17 per cent compared with Argentine gold coin, making the total depreciation in the paper 27 per cent.

Gold reserve and note circulation on December 31, 1921.

CURRENCY.

[From bullion letter of Samuel Montagu & Co., September 1, 1921.]

The use of nickel for currency still continues to increase. Reuter cabled that the Argentine Legation in London has been authorized to buy in England a quantity of nickel for the Argentine mint to a value of 9,400,000 pesos.

CIRCULATING MEDIUM BASED ON NATIONAL PRODUCTION.

[From *Commerce Reports*, April 14, 1921.]

Referring to statements often made that Argentina has an excessive currency in proportion to its population, Mr. Tornquist said that he considered such statements misleading, and pointed out that the circulating medium of a nation should be based on the value of the national production rather than on the number of inhabitants. Considering that before the war, when the annual national production reached 2,800,000,000 paper pesos (1 paper peso equivalent to \$0.4245 United States currency), a circulation of 823,000,000 paper pesos was not too much; he pointed out that it would be natural to conclude that to-day, when the national production exceeds 5,500,000,000 paper pesos, and when other factors, such as the rise in prices and the free circulation

¹ Issued by the Caja de Conversion. In addition to this legal paper there circulates about 1 billion pesos of paper issued by the Government. Normally convertible at 44 per cent of face value.

² Includes the 10,000,000 pesos deposited at the Banco de la Nacion.

of Argentine paper in contiguous countries are taken into consideration, the 1,360,000,000 paper pesos now in circulation must be insufficient to permit handling these products with facility.

The total import of United States gold bullion during the year ended December 13, 1920, was \$135,210,530.

Stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1920.

PRODUCTION OF GOLD.

[By Consul General A. Gaulin, Rio de Janeiro, in Commerce Reports, May 15, 1922.]

The total production of gold in Brazil averages slightly less than \$3,000,000 per annum. It is mined in the States of Minas Geraes, Matto Grosso, Goyaz, and Bahia, but the only mines of any importance are situated in the State of Minas Geraes. Prior to 1918 considerable quantities of gold were exported (4,368,770 grams in 1917), but at present there is a law prohibiting the exportation of gold or silver, and practically the entire production is sold to the Federal Government.

The largest gold mine in Brazil is at Villa Nova de Lima, in the State of Minas Geraes. The mine, which is now owned by an English concern, has now reached a depth of nearly 6,000 feet, and it is claimed to still have a reserve of 1,200,000 metric tons of ore. The monthly output averages from 12,000 to 15,000 tons of ore, and the yearly production is valued at about \$2,092,595. About 3,000 men are employed in this mine.

Another important mine is at Passagem de Marianna, Minas Geraes. About 7,000 tons of ore are crushed monthly, and the average yearly production is estimated at \$681,310. This company also is owned by English capital.

³ Government paper normally convertible at 16 pence (\$0.3244) per milreis.

BRITISH GUIANA.

The silver coinage executed in Great Britain since 1917 amounted to 372,000 4d. pieces, of a face value of 29,720 British Guiana dollars (\$30,132).

The estimated quantity of new gold and silver bullion used in the industrial arts during the year 1921 was as follows: Gold, 5,000 British Guiana dollars (\$5,069); silver, 3,000 British Guiana dollars (\$3,042).

The total import of United States gold coin during the year ended December 31, 1920, was 6,461 British Guiana dollars (\$6,550).

The quantity of gold produced from placer mining during the year 1921 was 12,828 fine ounces.

ECUADOR.**GOLD PRODUCTION.**

[From Engineering and Mining Journal, New York, June 3, 1922.]

Gold is produced at one mine—the South American Development Co., at Portovelo, in the southern part of Ecuador, near Zaruma. The control of this industry is based on a contract between the Ecuadorian Government and the company in charge. The production in 1921 was 22,224 pounds of metallurgic precipitates, valued at \$774,975, and 1,313 troy ounces of mill bullion, worth \$4,561. The production is disposed of to the United States, the total output being exported. No stocks are kept on hand. A considerable sum has been expended during the last few years to place this industry in a first-class condition, and new veins have been located which are said to be richer than those previously discovered. These mines are rather difficult to reach, all freight and passengers being carried on the backs of mules over the tops of the mountains.

PARAGUAY.

The stock of gold and paper used for monetary purposes on December 31, 1921, was as follows: Conversion fund gold, 953,204 pesos (\$919,651); Government notes and notes of banks of issue (normally convertible at 44 per cent of face value), 181,756,060 pesos (\$77,157,629).

The actual currency is paper.

Premium on gold: Highest, 4,375; lowest, 2,955; average, 3,519.

NEW ISSUE OF BILLS.

[From Bulletin of the Pan American Union, March, 1921.]

The President of the Republic has sent a message to Congress asking for authorization to issue the sum of 20,000,000 pesos. The message says in part: Of the 30,000,000 pesos of the emergency emission there remain disposable 8,403,000. The lack of Government bills and the urgency of the situation made it necessary for the exchange office to give 9,297,000 pesos of its resources, together with 12,403,000 pesos from the section of money exchange, to make up the 21,700,000 pesos withdrawn, producing a temporary lack of funds in the office.

PROPOSED ESTABLISHMENT OF CENTRAL BANK.

[Vice Consul George E. Seltzer, Asuncion, in Commerce Reports, March 1, 1921.]

The following are the more important features of a bill, introduced into the Paraguayan Congress to establish the "Banco de la Nacion Paraguaya":

ARTICLE 1. The "Oficina de Cambios" (Exchange Bureau) and the "Banco Agricola" (Agricultural Bank) of Paraguay will, in the future, function as one institution under the name of "Banco de la Nacion" (Bank of the Nation).

ART. 2. The general objects of the bank will be (1) to procure the stabilization and the conversion of the paper currency in circulation; (2) to facilitate the economic development of the country by intensifying the employment of capital disposable; (3) to make use of the system of rediscounts to procure the adoption of a banking policy that will assure the safety of the funds deposited in private banking institutions.

ART. 3. The capital will be 700,000 Argentine gold pesos and 58,300,000 paper pesos, consisting of the capital of the Oficina de Cambios and of 700,000 gold pesos and 15,000,000 paper pesos of the capital of the Banco Agricola and of 35,000,000 paper pesos and the unused portion of the rediscount law of September 8, 1920, amounting to 8,300,000 paper pesos.

ART. 4. After the debt of the Government to the Banco Republica is canceled the export tax of 1 gold peso on hides will go to make up part of the funds of the bank.

ART. 5. The President of the Republic is authorized to contract for a loan of 4,000,000 gold pesos to increase the capital of the bank.

ART. 6. The bank is authorized to make an emission of 20,000,000 paper pesos to reimburse the Oficina de Cambios and the Banco Agricola for the funds tied up in the two local banks that closed down.

ART. 9. The profits of the bank will be divided as follows: Five per cent to the board of directors and to the manager, and 90 per cent to be used in the economic development of the country.

ART. 12. The bank will issue, exchange, buy and convert the Government currency; will buy and sell gold in the form of coins or of bullion; will receive from ex-

porters 30 per cent of the value in the consuming market of hides, tobacco, yerba mate, lumber and guebracho extract exported; will receive deposits on time, savings, and check accounts; will buy and discount notes, letters of exchange, etc.; will re-discount the paper of the other banks; will lend on "agricultural warrants" or on certificates of deposit of agricultural products up to 50 per cent of their value.

ART. 14. The bank will have the exclusive privilege of issuing the paper currency.

ART. 15. When the Government's debt to the Banco de la Republica is canceled all Government income, all judicial funds, and all public moneys will be deposited in this bank.

ART. 17. The bank will be the financial agent of the Government for the reception of taxes; for the payment of Government disbursements with the funds of the treasury, etc.

ART. 25. The bank will be administered by a board of directors of seven persons; no public employee or director of any other bank may be named director of this bank.

ART. 39. The bank will always keep as a reserve no less than 25 per cent of its deposits.

PERU.

The gold domestic coinage executed in home mints during the year ended December 31, 1921, consisted of 43,143 1-pound coins (\$209,955).

The amount of gold in the form of old jewelry, etc., returned from the industrial arts to monetary use during the year 1921 was 3.3 fine kilos (106 ounces), valued at 458 Peruvian pounds (\$2,228).

The quantity of gold and silver produced during the year ended December 31, 1921, was as follows: Gold, 2,407 fine kilos (77,385 ounces), valued at 411,438 Peruvian pounds (\$2,002,263); silver, 306,498 fine kilos (9,853,911 ounces), valued at 1,584,822 Peruvian pounds (\$7,712,536).

RESERVE BANK.

[From Bulletin of the Pan American Union, Washington, August, 1922.]

In accordance with the law establishing the Reserve Bank of Peru, it has received from the Junta de Vigilancia the sum of 7,227,112 pounds. The amount of cheques circulares in present circulation, according to the liquidation of the Junta de Vigilancia, for which the reserve bank has been made responsible, is 7,221,976 pounds,

and the total of gold certificates in present circulation is 77,176 pounds, or a total of 7,299,152 pounds. Therefore the reserve bank has received a guaranty of 5,136 pounds in excess of the issue of cheques circulares and gold certificates.

The Junta de Vigilancia still has in its power new cheques circulares of different types and series to a value of 1,051,824 pounds, which are to be received by the reserve bank in lots permitting them to be destroyed upon receipt.

PERUVIANS BURN BANK NOTES WHEN BULLION IS SEIZED BY REBELS.

[From Washington Herald, November 6, 1921.]

Newspapers arriving here from Lima, Peru, record the Government's action in burning bank notes to the value of 10,000 Peruvian pounds following the seizure of that amount of bullion by Captain Cervantes, leader of the revolution against President Leguia in the Iquitos district.

* * * With the destruction of these notes and the deduction of 10,000 pounds gold from the amount for which the Bank of Peru and London is held responsible, the accounts of the Junta were thus balanced.

URUGUAY.

The amount of domestic silver coin withdrawn from monetary use for recoinage during the year ended December 31, 1920, was 270,000 pesos (\$279,234).

The amount of gold produced during 1920 was 1.42 kilos (46 ounces), valued at 425 pesos (\$440).

Approximate stock of gold and silver, also paper money, used for monetary purposes on December 31, 1920: Gold coin in banks, 60,145,934 pesos (\$62,202,925); silver coin in circulation, 2,730,000 pesos (\$2,823,366); Government notes in circulation, 64,108,603 pesos (\$66,301,117).

By decree of June 18, 1920, the Bank of the Oriental Republic of Uruguay was authorized to recoin 300,000 pesos (\$310,260) of the silver coins issued according to the law of January 3, 1916, in fractionary pieces of 20 centesimos, the new coins to weigh 5 grams and to be 0.800 fine and 25 millimeters in diameter.

GOLD EXPORT.

[From Bulletin of the Pan American Union, Washington, December, 1921.]

The exportation of 38,764 pesos in coined gold to the League of Nations has been authorized as Uruguay's contribution to the support of that organization. Authorization was also given for the exportation of 8,460 gold pesos in coin to Santiago, Chile, in payment for the minting of the 20-centimo pieces recently done in that city.

INCONVERTIBILITY OF PAPER CURRENCY EXTENDED.

[From Commerce Reports, January 23, 1922.]

The inconvertibility of paper currency has been extended until June 30, 1923.

GOLD STOCK.

[From Commerce Reports, January 23, 1922.]

Gold on hand in the Banco de la Republica at the end of September, 1921: 55,011,753 pesos (\$56,893,155).

VENEZUELA.

GOLD STOCK OF THE COUNTRY IN OCTOBER, 1921.

[Chargé d'Affaires J. C. White, Caracas, October 8, 1921. In Commerce Reports, December 19, 1921.]

Estimates place the amount of gold in the country at present at 85,000,000 bolivars. This aggregate is said to be distributed as follows:

	Bolivars.
Bank of Venezuela.....	57,660,000
Bank of Caracas.....	2,510,000
Bank of Maracaibo.....	635,000
Commercial Bank.....	315,000
Other institutions.....	23,880,000
Total.....	85,000,000
United States equivalent.....	\$16,405,000

COINS TO BE MINTED.

[From Bulletin of the Pan American Union, July, 1921.]

The President has decreed the coinage of 6,000,000 bolivars in silver.

Production of gold in 1920 and 1921.

[From Memoria del Ministerio de Fomento. Through United States Geological Survey.]

	Fine ounces.	Fine ounces.
1920.....	18,839	1921..... 11,215

EUROPE.

AUSTRIA.

Metallic stock and note circulation of the Austrian Bank on December 31, 1921.

[From The Economist, London, February 11, 1922.]

	Kronen.	U. S. dollars.
Gold coin and bullion, bills.....	10,017	2,029,444
Silver coin.....	5,000	1,013
Notes in circulation.....	174,114,747,000	35,275,647,742

GOLD RESERVE ON DECEMBER 31, 1921.

The Austrian Gold Reserve on December 31, 1921, was 81,000 crowns (\$16,411), according to Commerce Reports, May 15, 1922.

THE GOLD TREASURE OF THE AUSTRO-HUNGARIAN BANK.

[Trade Commissioner Donald L. Breed, Prague, Czechoslovakia, in Commerce Reports, August 23, 1921.]

The division of the gold belonging to the former Austro-Hungarian Bank has been ordered, with the result that Czechoslovakia is to receive 15,500,000 gold crowns; Jugoslavia, 7,000,000 crowns; Poland, Rumania, and Italy together 25,000,000 crowns; and Austria and Hungary the rest. Their nominal portion is declared to be 7,500,000 crowns, but 5,000,000 crowns is to be deducted because of the metal money now in Austria and Hungary. Their share of the treasure will therefore be about 1,750,000 crowns each.

TRANSFER OF AUSTRIAN GOLD TO OTTOMAN BANK OF LONDON.

[Commerce Reports, May 13, 1921.]

Information from Vienna states that gold to the value of 2,100,000 Turkish pounds which was deposited in the Austro-Hungarian Bank in the name of the council for the administration of the Ottoman public debt as security for the first issue of Turkish Government currency notes, has been requisitioned in accordance with the terms of the treaty of St. Germain. * * * The money is to be deposited in the Imperial Ottoman Bank of London through the Anglo-Austrian Bank.

CURRENCY.

[From The Numismatist, May 19, 1921.]

Because of scarcity of gold and silver, Austria is issuing leather bills and leather coins. They are made of pigskin, which is said to be very hard to counterfeit.

Official price of gold and silver after March 24, 1921.

[From Wiener Zeitung, February 24, 1921.]

1 kilo fine gold equals 300,000 crowns.	2-florin silver equals 198 paper crowns.
1 kilo fine silver equals 9,000 crowns.	1-florin silver equals 99 paper crowns.
100-crown gold piece equals 9,000 paper crowns.	5-crown silver equals 193 paper crowns.
20-crown gold piece equals 1,800 paper crowns.	2-crown silver equals 74 paper crowns.
10-crown gold piece equals 900 paper crowns.	1-crown silver equals 37 paper crowns.

¹ Conversion rate, \$0.63117 per ounce.

² Conversion rate, 1 Czecho-Slovak crown = \$0.013292.

The Czecho-Slovak Government mint at Kremnice began operations in 1921. No gold or silver coins have been minted as yet. The coinage executed in 1921 consisted of 40,000,000 20-heller pieces (face value, 8,000,000 crowns) and 5,235,880 50-heller pieces (face value, 2,617,940 crowns).

The imports of gold coin and bullion during 1921 were as follows: Gold coin from Austria, being Czechoslovakia's share of the gold reserve of the Austro-Hungarian Bank, 4,685 kilos, valued at 210,347,130 Czecho-Slovak crowns (\$2,795,934); gold bullion, mostly from England, 4,112 kilos, valued at 184,620,576 Czecho-Slovak crowns (\$2,453,977).

CURRENCY.

[From bullion letter of Samuel Montagu & Co., August 11, 1921].

The young and vigorous Czechoslovakian State is making a determined effort to place its currency upon a sounder basis than paper. A metal reserve fund has been created by voluntary gifts of gold, silver, and jewels worth 20,000,000 crowns, and a State loan of 100,000,000 crowns—say altogether £5,000,000—but before any link with gold can become effective an improvement of economic conditions must bring about a more equable relation between the totals of exports and imports. In Czechoslovakia old Austrian and Hungarian coins are still in use. These are expected to be withdrawn this year and new local coins substituted. The first Czechoslovakian coin was struck on January 1, 1921, in the State mint at Kremnice. This was the Hungarian mint before the war, and here were coined the golden ducats familiar from the plays of Shakespeare. Its archives date back to 1650. When the Austro-Hungarian Empire collapsed, the Hungarians carried away all movables and destroyed all else. The building has now been restored and new machinery installed. The new currency is to consist of crown, 50-heller, and 20-heller pieces.

DANZIG, FREE CITY OF.

The circulating medium of the free city is the German mark. There was no balance in the treasury at the end of 1921, and the stock established by the Reichsbank of 400,000,000 German paper marks is augmented by the amounts brought in by travelers and traders, so that it is impossible to ascertain the total stock of paper money in the free city.

Gold is bought by weight. The prices in German marks per kilo were as follows in 1921: Highest, 120,000 marks; lowest, 37,000; average, 65,520.

Danzig has no coins of its own but uses German fractional currency of 5, 10, and 50 pfennig denominations. These coins are made of aluminum and iron. They are of so little value that they now are not used to any great extent, the 5-pfennig piece, for example, now being worth less than one-sixtieth of a cent.

CURRENCY REFORM IN DANZIG.

[By Consul Charles L. Hoover, Danzig, December 16, 1921. In Commerce Reports, February 6, 1922.]

Recently a commission of financiers was sent to Danzig by the League of Nations to study the financial situation with a view to ascertaining what reforms might be undertaken in the currency system of the free city. The commission left without publicly issuing a report, but the authorities here evidently anticipate some recommendations for a change, as the minister of finance yesterday (December 15, 1921) delivered a speech in the Volkstag in which he strongly advocated the continuance of the German mark as the currency of the free city.

DENMARK.

The amount of gold and silver coin withdrawn from monetary use for recoinage during the year ended December 31, 1921, was as follows: Gold coin, 2,320 kroner (\$622); silver coin, 1,500 kroner (\$402).

The estimated quantity of gold used in the industrial arts during the year 1921 was about 200,000 kroner (\$53,600).

Approximate stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1921.

Character of stock.	Total used for monetary purposes.	
	Kroner.	U. S. dollars.
Gold coin and bullion.....	228,500,000	61,238,000
Silver coin and bullion.....	3,600,000	964,800
Government notes.....	471,000,000	126,228,000

Premium on gold: Highest, 130; lowest, 125.

The amount of raw silver imported in 1921 was 996,000 kroner (\$266,928); and the amount exported was 500 kroner (\$134). There was no import or export of gold coin and bullion.

ESTHONIA.

Approximate stock of gold coin and paper money used for monetary purposes on December 31, 1921.

Character of stock.	In home Government treasury.	In home banks.	In circulation.
	<i>Gold rubles.</i>	<i>Gold rubles.</i>	<i>Esthonian marks.</i>
Gold coin.....	11, 436, 675	500, 000

Government notes.....			¹ 2, 757, 181, 270
Notes of banks of issue.....			500, 000, 000
Total notes.....			3, 257, 181, 270
United States equivalent.....			² \$10, 475, 909

¹ Includes 92,999,000 Esthonian marks (\$299,108) technically in circulation but actually in the treasury temporarily on December 31, 1921. Of the above paper money, 845,976,000 Esthonian marks (\$2,720,613) is held as reserve stock.

² Conversion rate: 1 Esthonian mark=\$0.00321625, at the 1921 average exchange value 160 Esthonian marks=1 gold ruble=\$0.5146.

The actual currency consists of Esthonian paper marks. Exchange on December 31, 1921: 363 Esthonian marks to the dollar.

Premium on gold: Highest, 190; lowest, 145; average, 160 paper marks for one gold ruble.

LAWS AFFECTING THE CURRENCY.

By law of August 12, 1921, the minister of finance is entitled to withdraw from circulation Government bank notes and Esthonian Republic bonds of 50, 100, 200, 500, and 1,000 mark denominations put in circulation on an equal basis with those, and Esthonian bank 50-mark notes; also to exchange same against new paper currency; the exchange of paper currency is to continue three months at least, after the expiration of which the paper currency in question is not valid any more as legal tender, but may be exchanged at the treasury within one year; the minister of finance is entitled to issue small change up to 25 marks, the total amount not to exceed 10 per cent of the total Government banknote issue. * * *

The import of gold coin from Russia during the year 1921 was 1,436,675 rubles (\$739,313).

FINLAND.

Metallic stock and note circulation of the Bank of Finland on December 31, 1921.

[From the Economist, London, February 11, 1922.]

Balance abroad and foreign bills.....	224, 833, 000	43, 392, 769
Notes in circulation.....	1, 356, 108, 000	261, 728, 844

FINLAND TO HAVE NEW NICKEL-BRONZE COINS.

[Consul Leslie A. Davis, Helsingfors, Finland, February 4, 1921.]

The State Council of Finland has authorized the Bank of Finland and the director of the mint to make a contract with an English firm (the Mint Birmingham (Ltd.)), for 20,000,000 coins of nickel-bronze, of which 10,000,000 are to be 1-mark pieces, 5,000,000 50-penny pieces, and 5,000,000 25-penny pieces. (The normal value of the Finnish mark is \$0.193).

About 10,000,000 coins of smaller denominations are made in Finland annually, but as their manufacture here is difficult and expensive the director of the mint recently visited England to see about having the new coins made there.

NEW NICKEL COINS.

[From The Numismatist, Federalsburg, Md., October, 1921.]

The Bank of Finland has issued the new nickel coins in denominations of 1 mark, 50 and 25 penny. Twenty million marks have been struck, of which about half have been placed in circulation.

FRANCE.

Gold and silver coinage executed in 1921 at the Paris mint for France and her colonies.

COINAGE WITHDRAWN AND EXECUTED.

[From bullion letter of Samuel Montagu & Co., March 9, 1922.]

No new French silver pieces were made during 1921. Demonetized coins bearing the effigy of Napoleon III, which were called in from circulation in 1918, 1919, and 1920, were melted down and minted anew. The total value of coins thus called in was 72,000,000 francs; but, owing to depreciation in weight, only 67,500,000 francs in new silver coins was minted from them. The cost of transforming these coins, including the cost of the copper added to complete the alloy, amounted to 11,850,000 francs.

The amount of aluminum-bronze coins issued in 1921 was 77,626,642 coins of a nominal value of 87,643,464 francs. The mint, up to January 6 of this year, had put into circulation more than 56,000,000 francs' worth of these coins and in exchange had withdrawn paper notes for that amount. The number of metal coins of smaller values issued in 1921 totaled 96,244,721, of an estimated value of 10,751,668 francs.

NEW BRONZE-ALUMINUM COINAGE.

[From bullion letter of Samuel Montagu & Co., September 8, 1921.]

* * * The pieces are struck from an alloy of bronze-aluminum, the correct proportions having been found only after much research. The coins are of an attractive golden color, and at present are being struck at the rate of 10,000,000 francs per month. We are informed that the small output is owing to the deteriorating effect of the new alloy, which is very hard, upon the machinery used in coining.

[From the Bankers' Magazine, New York, March, 1921.]

A new form of money is about to make its appearance in France. This new currency, according to information received * * *, will be coins made from a composition of bronze and aluminum. It will replace the emergency paper money issued during the war in 2, 1, and one-half franc denominations. * * * The 2-franc, 1-franc and 50-centime bills, because of the depreciation of French money, have been used as small change along with old 10 and 25 centime coins, with the result that they have been submitted to wear which small paper bills can not long withstand. These paper bills were issued temporarily by the various chambers of commerce in France

under a special agreement with the Government under which an equal amount of Bank of France notes are deposited in the Bank of France by the chamber of commerce for the paper money which they issue.

The small paper currency will be withdrawn as fast as the new coins are issued. Since there is some difficulty in securing the metal necessary to make the coins, it is estimated that it will take two or three years to complete the change.

It is difficult to secure an exact statement of the amount of small paper money issued to date. It is certain, however, that the figure is at least 400,000,000 francs. The amount actually in circulation is about 300,000,000—100,000,000 having been either reimbursed or kept by collectors or destroyed by use.

The new coins or "jetons" will be acceptable throughout France and will be issued under the responsibility of the Ministry of Finance, the chambers of commerce serving merely as the distributing medium.

MONETARY CONVENTION OF THE LATIN UNION.

[From *Moniteur des Intérêts Matériels*, Brussels, December 12, 13, 1921.]

The conference of the Latin Union, held at Berne and continued at Paris, has defined the basis of the convention.

This convention specifies the fate of the 250,000,000 5-franc silver pieces belonging to France, Belgium, Greece, and Italy, and which have been withdrawn from circulation in Switzerland.

According to the old convention of the Latin Union, France, whose share is 130,000,000 out of the 250,000,000 was to take back 60,000,000. Switzerland demanded that the entire sum be taken back. This demand has been admitted in principle and applied under the following conditions:

The old convention authorized Switzerland to mint 10,500,000 5-franc pieces. The new agreement will allow her to mint 80,000,000 and to use for this purpose the stock of foreign coins. Moreover, France binds herself to pay Switzerland 20,000,000 in gold for immediate redemption of an equivalent amount of 5-franc pieces. The balance due to the Swiss Republic for the redemption of the remaining 5-franc pieces will be paid by France at the Swiss rate of exchange within a definite length of time and at a comparatively low interest. Besides, Switzerland may resell at any time the coins held by her, giving notice to that effect 15 days in advance. Italy will take back 20,000,000 and Belgium 6,000,000 5-franc pieces.

FRANCE PREFERS U. S. BANKNOTES.

[From *Washington Star*, October 8, 1922.]

"Apparently there are still many Americans," said a French bank teller recently, "who believe that the surest and most convenient way to carry money abroad is in the form of gold pieces. Not a day goes by but we have a dispute with some American tourist who wants to change a \$10 or \$20 gold piece and is indignant when we tell him we can give only par exchange on it.

"This apparent anomaly is due to the fact that the laws of practically all European Governments forbid dealing in gold coin at a premium. Other laws forbid the exportation of gold. Therefore all we can do with a \$10 piece is turn it in to the Banque de France and receive about 52 francs for it, whereas a \$10 bill is worth over twice as much.

"The law against selling gold coin at a premium is intended to prevent hoarding of gold, but, of course, it fails in many ways. There is a considerable illicit traffic in gold coins, which are bought up at a small premium and then resold to unscrupulous jewelers, who melt them down and sell them as commercial gold.

"A good many Americans, it appears, think it wise to have a few gold pieces in their pockets for emergencies. They think that when they are in some remote place where letters of credit and checks are unknown and foreign bank notes regarded with suspicion, the yellow metal will always be acceptable.

"This is a costly error. The best money for such purposes is American bank notes, which are the most esteemed currency in the world today."

Metallic stock and note circulation of the Bank of France on December 29, 1921.

[From *The Economist*, London, December 31, 1921.]

PRICE OF GOLD PER KILO.

In 1918 the price was uniformly 4,300 francs (\$830). In 1919 the maximum price was 8,100 francs (\$1,563); the minimum price, 4,300 francs (\$830); the average price, 5,220 francs (\$1,007). In 1920 the maximum price was 11,000 francs (\$2,123); the minimum price, 7,400 francs (\$1,428); the average price, 9,500 francs (\$1,834).

SILVER PRODUCTION IN 1919 AND 1920.

[From bullion circular of Samuel Montagu Co., August 31, 1922.]

We have heard on excellent authority that the actual output each year was about 10,000 kilos, or 321,500 ounces.

GERMANY.

The German silver coins have been demonetized by the decrees of July 12, 1917, and April 13, 1920. In order to prevent their disappearance by melting or otherwise, the Reichsbank was given, by decree of February 7, 1920, the monopoly to buy up German silver coins at a price above their face value (in 1921 the price paid by the Reichsbank for a silver mark ranged between 3 and 20 marks).

Gold coins do not circulate any more. The metallic circulation is confined to base metal coins in denominations of 50, 10, 5, 2, and 1 pfennig. Cash payments are made in bank notes, Reichsbank notes, and Darlehnskassen notes.

SILVER STOCK OF THE REICHSBANK.

[From "Der Edelmetallhandel" year of 1921. Jacob & Scheidt, Berlin, 1922].

In Germany the silver stock of the Reichsbank has not been published as such. Up to 1920 the German silver coin was included with the subsidiary and minor coins, the stock of which could be seen from the statement of the Reichsbank. Since the

stock of copper and nickel coins was quite insignificant in comparison with the silver coins it may be left out of consideration. The stock of silver bars and foreign silver coins of the Reichsbank was published under "other assets," where the silver stocks have also been indicated since the demonetization of German silver coins on April 20, 1920.

Taking into consideration these limitations, the silver stock of the Reichsbank showed the following development:

[In million marks.]

End of year—	Subsidiary and minor coins.	Silver bars and foreign coins.	Total silver stock.
1913.....			
1914.....	276.8		1 276.8
1915.....	36.9		1 36.9

1921.....		1,155.3	1,155.3
		1,331.6	1,331.6

¹ Exclusive of the stock of silver bars and foreign coins, but inclusive of the minor coins made of other metals.

² Including minor coins made of other metals.

The disappearance of the silver subsidiary coins, as shown by this table, is explained by the demonetization of the silver coins. From 20,500,000 marks on December 31, 1919, the stock of minor coins increased, in consequence of the purchase of silver coins by the Reichsbank, at a price above their face value, until April 15, 1920, to 68,700,000 marks. On April 20 the silver coins were demonetized, and, according to the banking laws, have disappeared from the stock of minor coins. This stock (of minor coins) dropped therefore to 3,200,000 marks on April 23, 1920, and rose to 5,800,000 marks on December 31, 1920, whereas the item "silver bars and foreign silver coins" of "other assets" was increased by that silver stock which had a face value of 65,500,000 marks. The value given in the above table to the coins is the face value of these coins. The value of the silver bars and foreign coins up to and including 1919 is the price paid therefor by the Reichsbank. The balance value of 9,800,000 marks silver amounted on December 31, 1919, to 10,600,000 marks. Taking this latter amount as a basis, the purchased 1,245,200,000 marks silver bars and foreign coins were added at the purchase price, and the 1,500,000 marks sold were deducted, whereby the stock on December 31, 1920, amounted to 1,155,300,000 marks out of the balance of 1,484,600,000 marks. In the year 1921 the Reichsbank bought silver for 1,137,300,000 marks and sold largely to foreign countries to the amount of 1,290,200,000 marks. In consequence thereof, the silver stock on December 31, 1921, amounted to 1,331,600,000 marks in the balance of 1,380,900,000 marks. Quantitatively, the silver which 814,000 kilos was deposited abroad. The fine kilo is valued in the balance at 1,380 marks as against the market price in Berlin of 3,600 marks and in London of 3,918 marks. If the last two prices are taken as a basis, then the value of the silver stock of the Reichsbank at the end of 1921 amounts to from 3,600,000,000 to 3,900,000,000 marks paper money, or 82,000,000 to 89,000,000 marks gold. In the course of the year 1921 the greater part of the silver stock was given as security in order to obtain a Lombard loan of 58,000,000 gold marks in the United States (about 30 per cent), in Holland (about 50 per cent), Sweden, Denmark, and Switzerland. These loans have been largely repaid at the end of 1921, but the silver, 814,000 kilos, was left abroad.

EXPORT OF CURRENCY FROM GERMANY.

[From the Statist, London, October 22, 1921.]

* * * Securities and negotiable instruments in German or foreign currency may not be sent or taken out of Germany except through banks. An exception is made in the case of personal conveyance abroad within one calendar month of money in sums not exceeding 3,000 marks or the equivalent of this amount in foreign currency calculated at the rate of exchange of the day. The conveyance abroad of German and foreign minted gold, fine gold, and gold alloys of any percentage is prohibited. Similarly the conveyance abroad of silver in any form is prohibited. * * * The introduction, transit, and conveyance abroad of money (bank notes, letters of credit, coins, etc.) in rubles of Russian currency is prohibited.

SMUGGLING GOLD OUT OF GERMANY.

[From bullion letter of Samuel Montagu & Co., November 17, 1921.]

Reuter reported from Copenhagen, under date of November 10 last, an occurrence which can be described as the work of a supersmuggler, in the following words: "According to a telegram from Aabenraa (Silesia), customs officers at Hareslev, on the Dano-German frontier near Plensburg, were to-day inspecting a locomotive constructed in Germany for a Danish firm, to be delivered on November 8, when they found in it gold ingots to the value of 24,000,000 gold marks (£1,200,000), the intention evidently being to smuggle the gold out of Germany. The customs officers confiscated the ingots."

BERLIN NOW USING THE AMERICAN DOLLAR AS THE CONTRACT STANDARD.

[From the Numismatist, Federalsburg, Md., September, 1921.]

A special cable to the New York Times from Berlin says that, following the example of many private German concerns, some Berlin officials have lately adopted the American dollar as the standard for fixing prices in any large transactions. Thus, a con-

tract just closed by the municipal government with two private concerns stipulates that an annual rent of 13 American dollars must be paid for each post to be erected in Berlin streets for advertising purposes. This form of contract may, however, be somewhat amended, since in Germany the only legal tender is the mark. Nevertheless, the municipal government will insist that payments in marks shall be made according to the rate of exchange for the dollar prevailing when the payments are due.

CURRENCY RESERVE LAW SUSPENDED.

[From *L'Economiste Européen*, Paris, June 3, 1921.]

The law of May 9, 1921, suspends until December 31, 1923, article 17 of the law of 1875, stipulating that the Reichsbank should have in its vaults at any moment, as a cover for its notes in circulation, at least one-third their amount in German legal tender money, Reichskasse certificates, or gold.

GOLD RESERVE INEFFECTIVE.

[From bullion letter of Samuel Montagu & Co., August 24, 1922.]

We have remarked on occasion in connection with gold currency reserves, that, in order to afford effective support to foreign exchanges, they must be available—either actually or potentially. When gold in reserve is known to be held immobile as a policy, it ceases to function. The situation of Germany is an emphatic commentary upon this fact.

The value of the gold held in the Reichsbank, if sold in the world's market, is about £54,000,000. On the 14th instant the notes in circulation amounted to 205,275,349,000 marks. The value of currency marks in British currency sank by noon to-day to 8,400 marks to the pound. On this valuation, the entire Reichsbank issue calculated in British currency (allowing for some increase subsequent to the 14th instant) is worth only about £24,500,000.

Theoretically, therefore, the Reichsbank may be said to hold the foreign value of its entire note issue in gold and to have a gold reserve of £29,500,000 to spare. As a fact, however, this statement is incorrect, for the value of the mark abroad would be improved instantly and powerfully if the Reichsbank gold reserves were applied to the payment and cancellation of its notes.

GERMAN CURRENCY CONFUSION GROWS.

[From *New York Journal of Commerce*, June 10, 1922.]

The Reichsbank yesterday (May 25) announced the impending issue of notes in denomination of 10,000 marks. This marks a new phase in the currency depreciation. At present the biggest note is for 1,000 marks; and before the war this note was seldom seen by the general public, the standard "big" note being so-called blaue Lappe of 100 marks. To-day with a motor-taxi drive within city limits costing more than 100 marks, and a mediocre pair of shoes costing 1,000 marks, the new 10,000-mark bills will have about the same middle value as the 5,000,000 ruble bills issued for similar reasons by the Soviet Finance Ministry.

COINS IN CIRCULATION.

Already an enormous number of different kinds of notes and coins circulate in Germany. Their production causes technical difficulty and heavy expense, as when coins pass out of circulation owing to their metal value exceeding their nominal paper value, and when bills, like the present 1 mark and one-half-mark bills, cease to pay for even the cheapest articles, new coins of cheaper metal and notes of higher denomination must be produced. Eight years' experience has made the Reichsbank a master in this technique; but a new, equally difficult problem will arise when deflation and currency restoration come.

PROGRESSIVE INFLATION.

The federal statistical department has issued an instructive report on the circulation of money, considered independently of the currency problem, which properly concerns the securing of issues and their home buying power and foreign exchange. The new report deals only with coinage and paper money as such, their totals and distribution among the various denominations, and the displacement in this distribution

which is continually going on owing to the fall in the mark's purchasing power. The position as regards the coinage is as follows: Legal tenders are still gold, nickel, and copper coins; but as in ordinary business they could be booked only on a paper basis, they have disappeared entirely from circulation. That even the metal in nickel and copper coins is worth much more than its paper equivalent can be understood from the fact that there is a 1-pfennig copper coin nominally of value one one-hundredth of a mark, and therefore worth at present exchange only one thirty-thousandth of a dollar. Silver also long ago passed out of circulation; and by law of April 1920, it was, unlike gold, declared to be no longer legal tender. At present the lowest coin is of iron, but even its value is 5 pfennigs, or five times higher than the smaller pre-war copper coin. It is still possible to coin 10-pfennig pieces of zinc without loss, but the lowest aluminum coin is 50 pfennigs. If the currency continues to depreciate even the iron coins will pass out of circulation, because as scrap iron they will be more valuable than as money.

CIRCULATION OUTSTANDING.

Before the war Germany had in circulation 2,750,000,000 marks gold, 750,000,000 silver, 100,000,000 nickel, and 22,000,000 copper; in all 3,622,000,000. At the end of March her whole metal circulation consisted of 91,000,000 iron, 109,000,000 zinc, and 336,000,000 aluminum, in all only 536,000,000, whereas her paper circulation amounted to 139,944,185,000 marks. Thus only about one three-hundredths of the currency now in circulation is metal; whereas in 1914 the metal circulation was 3,622,000,000 and the note circulation of all denominations only 2,648,000,000. "Circulation" of coins here means only the actual coins estimated to be circulating or hoarded after allowance for those supposed to have been melted down or otherwise finally disposed of. Paper has largely replaced metal even in the very small denominations. Before the war the smallest Reichsbank note was 20 marks, and the smallest of all notes was the "Reichskassenschein" (a State note) of 5 marks. To-day are in circulation about 1,000,000,000 marks in 1-mark and 2-mark "Darlehnskassenschein," or loan notes, issued by the war loan bureau, established in August, 1914. These, however, are not the smallest notes. In circulation are 50-pfennig notes, issued by local authorities, which have at present an exchange value of about one-sixth of a cent. Large quantities of other small municipal currency, so-called emergency notes, mostly dating from 1918, still circulate; but at present is being considered a bill forbidding any further local issues, calling in those outstanding and providing for their replacement with coins. France and some other countries have already got over similar, if not such serious troubles. Where silver and copper token money passed out of circulation, as result of its metal value exceeding its nominal value, France minted a new token money in cheaper metals. Germany has done that only to a slight extent. No really stable coinage is possible without a guarantee that the value of her mark shall not further fall.

PAPER MONEY.

The statistics of distribution of paper money among different denominations shows very strikingly the extremes to which the currency depreciation has gone. At the end of March, 1921, out of 130,671,000,000 of marks Reichsbank notes in circulation, 64,780,000,000, or just one-half, consisted of 1,000-mark notes and 48,000,000,000 consisted of 100-mark notes. Only 18,000,000,000, or about one-seventh of the whole, consisted of notes of 50 marks or under. In 1914 only one-seventh of the circulation was in form of 1,000-mark notes. In 1919, for the first time, appeared notes for 500 marks, but these were issued by the loan bureau and not by the Reichsbank; and only the small sum of 51,600,000 marks was put in circulation in this form. Local Saxon, and Baden note banks, which are really private institutions. Württemberg, in addition to municipal token money, nearly 10,000,000,000 of marks have been issued by other authorities than the Reichsbank. The whole picture on March 31 last was as follows:

[In 1,000 marks.]

Issued by Reichsbank.....	
Issued by State.....	130,671,352
Issued by private note banks.....	237,696
Issued by loan bureaus.....	334,546
	8,700,591
Total circulation.....	139,944,185

DECREASE IN STATE NOTES.

The State note circulation is decreasing. That of the private note banks has been doubled since 1914. Both play ever smaller rôles compared with the Reichsbank note circulation, which has multiplied more than fiftyfold since 1914. The loan bureau note circulation began immediately after the outbreak of the war, was 629,370,000 marks at close of March, 1915, touched a maximum of 13,731,000,000 in March, 1920, and has since declined to 8,700,000,000. Reason for this decline is that the advances made during the war by the bureau on security of stocks, etc., which advances were financed by printing notes, are now being paid off. Ultimately the loan bureau notes will probably disappear altogether. The total currency circulation in metal and notes increased between December, 1913, and March, 1922, from 6,375,200,000 marks to 140,151,000,000 marks. This, taking the former figure at 100, gives an index of increase of 2,198.4.

ENGLAND'S NEW COINS NOT POPULAR.

[From The Numismatist, April, 1921.]

England's new coins, which are only 500/1,000 fine, are not at all pleasing to the people, according to the following from the London Daily Express:

"Nobody likes or wants the new silver coinage. It is too various in its complexions, too unpleasant to the touch, to find a single friend. The money has had a public life of 10 days only, and already the coins have lost their minted whiteness. They are changeable in appearance and chameleonlike in habits. At the end of a week they are change to a nasty sickly yellow tint, and then become a greasy, unhealthy black. They are dirtier to the hands and pockets than copper. Shop assistants, booking clerks, omnibus conductors, and the people who are constantly changing money, are all enemies of the mint's latest effort. They say the silver has that peculiar soapy feel previously associated with counterfeits."

Fluctuations of the price of gold at London since July, 1920.

FOREIGN COINS IN GREECE.

[From Moniteur des Intérêts Matériels, Paris, November 4, 1921.]

A decree, just issued at Athens, prohibits the importation of marks, crowns, and Turkish pounds, and the exportation of gold and silver.

NOTE CIRCULATION.

[From Commerce Reports, January 23, 1922.]

The total note circulation of Greece amounted in November, 1921, to over 2,100,000,000 drachmas, part of which was uncovered. By law, the National Bank of Greece, the medium through which notes are circulated, is permitted, as soon as it has obtained a loan from abroad, to issue paper money against this credit. As the bank exhausts its credit it is obliged to withdraw the equivalent paper from circulation. Accordingly, paper was issued against the credits granted to the former Venezelist Government by the United States, United Kingdom, and France, of \$48,239,267, £14,700,000 and 410,000,000 francs, respectively. Up to April 1, 1921, Greece had received on account of these credits, \$15,000,000, £7,000,000, and 50,000,000 francs, leaving unpaid amounts of \$33,239,367, £7,700,000, and 360,000,000 francs, or converted at the normal rate of exchange, as the banks did in converting it, into a credit of 744,579,921 06 francs. This latter sum, at least of the paper now in circulation, is uncovered, unless the recent loan of £15,000,000, said to have been made in the United Kingdom, reduces this sum. Further issues of paper may be expected from time to time.

HUNGARIAN CURRENCY.

[From the Economist, London, April 9, 1921.]

The Secretary of the Finance Ministry, Mr. B. Schober, has introduced before the financial council his monetary reform scheme, which will soon be introduced before Parliament. According to this scheme, a State note-issuing bank will be established, which will withdraw the notes of the Austro-Hungarian Bank and of the Hungarian Post Savings Bank. The new State paper money has been ordered in Switzerland, in the amount of no less than 22,000,000,000 kronen. Their printing expenses amount to 700,000,000 kronen. The bank will be authorized to issue, besides the amount necessary to the withdrawal of mentioned notes, 1,500,000,000 kronen for private credit purposes, and 1,000,000,000 kronen to cover the deficit of the budget. Its sphere of activity will be the same as has been that of the Austro-Hungarian Bank, with the difference that the new State bank will not deal with agricultural credit.

MONETARY REFORM.

[From Moniteur des Intérêts Matériels, Brussels, May 5-6, 1921.]

During a first period of two weeks beginning May 1 all the bank notes stamped in Hungary will be exchanged without any reduction against new Government notes. During a second period the exchange will still be made without reduction at the State bank, but the other banks will be authorized to retain a certain percentage. During the third period there will be a deduction of 5 per cent from the amount of the notes exchanged, but they will be accepted for their full value in payment of taxes or other sums due to the State. Finally, during the last period, beginning December 1, 1921, the notes of the old Austro-Hungarian Bank will no longer be accepted. The banks will be supplied with notes so as to meet all the needs. The new issuing institution will have its domicile at the old Austro-Hungarian Bank.

ITALY.

The amount of domestic silver coin withdrawn from monetary use for recoinage during the year 1921 was 144 lire (\$28). The amount of foreign gold coin withdrawn for industrial use during 1921 was: British coin, £211 (\$1,027); French coin, 60 francs (\$12).

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1921, was as follows: Gold, 5,000 fine kilos (160,750 ounces); silver, 45,000 fine kilos (1,446,750 ounces).

ADOPTION OF THE UNITED STATES GOLD DOLLAR AS A STANDARD.

[New York Journal of Commerce, August 23, 1921.]

The replacement of the pound sterling by the gold dollar as a standard upon which the Italian gold lira is based, announced recently from Rome, is not likely to affect international exchanges, according to Italian bankers, who explained that it simply means a change of the basis for the calculation of duties payable in gold and similar gold transactions.

The dollar standard has been adopted because the United States is Italy's largest creditor and because New York has become the principal gold market of the world since the war.

At the National Exchange Institute of Rome the reason given * * * was that "dollars are real money. The pound is no more the standard for gold, while the dollar maintains an equal par with gold. Italy has been losing money all the time she used the pound. Italy has collected all obligations owed her on the basis of the pound and all Italian customs duties have been fixed that way, with the result that the Italian treasury was being deprived of many million lire annually. The dollar being the best money in the world, we will now have a true value on which to base the lira—that which nearest approaches gold."

MONETARY DATA, CALENDAR YEAR 1920.

The amount of silver coinage executed in Italy for the Italian colony of Somaliland during the year ended December 31, 1920, was 1,300,000 Italian rupee pieces (\$421,720).

The amount of gold and silver coin withdrawn from monetary use for recoinage during the year ended December 31, 1920, was as follows: Domestic gold coin, 20 lire (\$4); domestic silver coin, 2,001,230 lire (\$386,237). Foreign gold coin: England, 3,170 lire (\$612); France, 40 lire (\$8).

The quantity of silver produced from placer mining during the year ended December 31, 1920, was 9,252 fine kilos (297,452 ounces), valued at \$303,223.

The amount of silver coin exported to England during the year 1921 was £21,560 (\$104,922).

PROPOSED LATVIAN CURRENCY REFORM.

The Latvian Ministry of Finance has proposed to the cabinet a currency reform by which Latvian money alone will be permitted in circulation in Latvia. All Latvian contracts must be closed in Latvian currency, except such as are made with foreign countries. The new unit will be 1 latt (gold franc)=100 centimes. One latt (gold franc) contains 0.29032 gram of pure gold. The following coins will be issued: Gold—20 latts; silver—1, 2, and 5 latts; nickel—10, 20, and 50 centimes; bronze—1, 2, and 5 centimes. The present treasury notes may continue in circulation for the present and will be guaranteed by the Government's gold reserve and property. The requisite amount of small coins will be circulated and gold and silver money coined to replace the remaining treasury notes. It is proposed to place the currency on a gold basis, giving the latt a gold value of \$0.192953. The proposed gold coins of 20 latts would then have a bullion value of \$3.85906.

PROPOSED BANK OF ISSUE FOR LATVIA.

[Trade Commissioner H. Lawrence Groves, Riga, May 11, 1921, in Commerce Reports, June 27, 1921.]

The establishment of a bank to have sole right of currency issue is the central idea in the plans of the Latvian Government for placing the country's currency and finances on a sound basis. * * * The proposed capital to be fully paid in is 75,000,000 francs gold, of which it is expected that one-third can be raised in Latvia and the balance abroad. * * *

With the gold franc as unit it is proposed that the bank shall issue currency to the equivalent of 200,000,000 francs. On this basis the franc currency would have a 40 per cent gold covering. The present Latvian currency is the ruble, which is equivalent in nominal value to the Russian ruble, or approximately 51 cents. At present this Latvian ruble currency is greatly depreciated, 1 ruble at current exchange being less than one-fifth cent. The plans provide for gradual retirement of the ruble currency (of which over 2,000,000,000 rubles are now issued) within a fixed period of time. In the meantime the relation between the gold franc and the ruble will be fixed from day to day or periodically as exchange conditions vary.

LATVIAN CURRENCY.

[From Moniteur des Intérêts Matériels, Brussels, January 27, 1922.]

According to the Latvian Economist, the Latvian monetary system will be based on a gold franc. This latt or gold franc is divided into 100 centimes.

According to the law of March 18, 1920, modified in July, 1921, the coining and putting into circulation of the money are exclusively reserved to the State, under the supervision of the Minister of Finance, charged with maintaining the stability of the monetary system.

The following denominations will be coined: Gold, 100, 50, 20, 10, and 5 franc pieces; silver, 5, 2, 1, $\frac{1}{2}$, $\frac{1}{4}$ franc pieces; nickel, 20, 10, 5, 2, 1 centime pieces.

The amount of gold coin in circulation will be unlimited; the amount of silver must not exceed 6 francs per capita, and of nickel 1 franc per capita.

LITHUANIA.

A PROPOSED NATIONAL CURRENCY.

[By Trade Commissioner H. Lawrence Groves, Riga, in Commerce Reports, January 16, 1922.]

As a means of freeing itself from subjection to the German foreign exchange situation, the Lithuanian Government is proposing, more seriously than hitherto, the introduction of its own national currency to displace the German guaranteed "ost" currency. Among various plans proposed, one that is being urged would establish a currency based on the American dollar, the unit to have the value of, say, one American cent; this unit would be called a dollar, franc, or any other satisfactory title.

The foreign exchange value of this currency would be determined at all times by the exchange rate on the dollar; that is, a Berlin buyer of Lithuanian exchange would pay for it at the Berlin rate on the dollar. Of this new currency a billion or so cents (or other name under which the unit goes) would at first be issued for buying in the ost currency in part. Underlying this currency would be the country's present gold stock, amounting to 3,000,000 rubles, or approximately \$1,500,000.

In connection with the introduction of the new currency, an emission bank would be established as a private institution under Government control, along the lines of the Bank of England. It is proposed to start this bank with an initial capital of the equivalent of about \$5,000,000 with, say, two-thirds Lithuanian money and one-third foreign. This bank would possess the sole right of emission, would discount commercial paper, and would carry out the other usual functions of a State bank. At present there are practically no discounting facilities in Lithuania for the commercial banks, and they have been forced, therefore, to take all their discounting business to Germany. The legislative acts necessary to carrying out the above financial operations are now under consideration, and the advocates of this plan are hoping it will be realized within four or five months.

MONETARY SYSTEM.

[From Times Trade Supplement, London, Vol. X, p. 522, September 9, 1922.]

A law promulgated in August by the Government of Lithuania provides for the establishment of the "litas" as the unit of a new currency, to take the place of the ost mark issued by the German Army during the occupation. The litas is to be divided into 100 cents and is to have a gold value of 0.150462¹ grams of pure gold. All tenders for payment which are in circulation in Lithuania are to be exchanged for litas within three months of the date of introduction of the new currency, which will probably be January 1, 1923. The Minister of Finance will fix the rate of exchange, which will fluctuate according to the exchange value of the present currency in terms of dollars. With gold obtained from the Bolsheviks and the annual remittances from emigrants to America, the Lithuanian Government hopes to be able to provide the necessary gold funds for establishing the new currency.

One important factor seems to have been overlooked—the danger that marks will be smuggled into Lithuania to be exchanged for the new gold currency. In bringing the new law into operation, the rate of conversion will have to be fixed at such a figure as to defeat this process. A much safer policy would be for the Government to decree that after a certain time marks will cease to be legal tender, and to introduce the new currency through Government disbursements and tax collections.

The new currency will be managed by a State bank, to be called the Lithuanian Bank, which is to have a capital of 12,000,000 litas, divided into 120,000 shares of 100 litas each.

According to the Federal Trade Information Service (p. 31, October 5, 1922), the litas was put into circulation on October 1.

The Financial Times (August 31) reports that the rate of exchange has been fixed by the Finance Ministry as 1 litas=125 reichsmarks.

¹ Equal to 10 cents, United States.

Government notes.....		229,537,560,446
United States equivalent ¹		\$54,675,846,887

¹ Converted as of the value of the German mark.

The actual currency is paper without par value. The Republic of Poland has at the present time no metal currency. All coinage, such as the Russian, German, and Austrian, previously circulating in the territories now Polish, has been replaced by the Polish mark. On December 31, 1921, the mark was quoted at approximately 2,800 to the United States dollar.

COINAGE.

[From Moniteur des Intérêts Matériels, Brussels, February 3, 1922.]

The Minister of Finance has authorized the coinage of subsidiary coins to be put soon in circulation and replace the small denominations up to and including 100 marks. It will consist of an alloy of nickel and other metals.

CURRENCY AND EXCHANGE.

[From Commerce Reports, January 23, 1922.]

The paper currency outstanding increased during December from 207,000,000,000 marks to 229,000,000,000, or over 10 per cent, the amount at the end of the year being four and one-half times greater than on January 1, 1921. Notwithstanding this increase in circulation, the rate of foreign exchange rose during December from about 3,600 marks to the dollar to about 2,900. The magnitude of the improvement in the exchange situation during the last quarter of 1921 is indicated by the fact that whereas the currency in circulation increased fully 50 per cent the exchange value of the mark doubled from its low point of more than 6,000 marks to the dollar, reached in September.

[By American Consul General L. J. Keene, Warsaw, August 16, 1922.]

There is no law which determines the par gold value of the Polish mark, but in cases where regulations require payment in gold marks the par gold value of the German mark is taken as a basis for the calculation.

The Polish Government has not coined any pure metal currency and no metal coins are in circulation in Poland.

PAPER EQUIVALENT OF THE METALLIC RESERVE.

[From Commerce Reports, March 20, 1922.]

* * * The Finance Minister of Poland stated recently that to cover the emission of 229,000,000,000 paper marks the bank held gold and silver currency and bullion and foreign currency and exchange to the value of 86,000,000,000 paper marks, exclusive of soviet gold and jewels already received or to be received, of various minor quantities of precious metals and objects made from them, and of gold to be received from the Austro-Hungarian Bank.

* * * The metal reserve and foreign currencies are given in the balance sheet at their value in Polish marks at par (23.4 cents) and not at their present very much greater value in paper money. Calculating the ratio of the value of Polish paper money to gold from the ratio of Polish marks to dollars in exchange, the value of gold on December 31 was about seven hundred times as great as that of paper money. On this basis the 68,000,000 marks of metal reserve held by the Polish State Bank on December 31 would be worth in the neighborhood of 50,000,000,000 Polish paper marks. The character of the foreign currencies held by the bank is not reported.

PORTUGAL.

Metallic stock and note circulation of the Bank of Portugal on December 28, 1921.

[From Moniteur des Intérêts Matériels, Brussels, February 1, 1922.]

EXPORTATION OF RUMANIAN GOLD.

[From Moniteur des Intérêts Matériels, Brussels, January 29, 1922.]

The Minister of Finance recently issued a decree forbidding the exportation of gold extracted from Rumanian soil. The yellow metal will be deposited at the national bank as a cover for the bank note issues.

RESTRICTION OF THE CIRCULATION OF NATIONAL MONEY IN RUMANIA.

[From Moniteur des Intérêts Matériels, Brussels, November 26, 1921.]

The Council of the Rumanian Ministers promulgated recently restrictive measures with regard to the circulation of lei.

They decided that, until further order, the deposits of lei in banks beginning November 10, 1921, or which will be produced subsequently for the account of foreign banks, even if these have representatives in the country, can not form the object of transactions except within the limits indicated below:

Any transfer if these funds * * * even from accounts in one and the same bank can not be made without the authorization of a supervisory committee appointed by the National Bank of Rumania.

This committee will be located in Bucharest and will comprise a delegate of the Government, a delegate of the banks, and a delegate of the National Bank of Rumania.

Committees will be appointed in the Province according to the needs and on the same basis.

The commission will authorize transfers of funds only in case of a real sale or purchase of merchandise or for the payment of services really rendered. * * *

No authorization on the part of the commission is needed for payments that do not exceed 100,000 lei a month of one and the same account or for payments necessary to the maintenance of foreign missions acknowledged in the country.

RUSSIA.

GOLD PRODUCTION.

[From the Commercial and Financial Chronicle, New York, July 8, 1922.]

The Finance Commissariat reports only 84 poods (45,000 ounces) of gold mined in 1921, as against 109 poods (57,225 ounces) in 1920 and 3,715 poods (1,950,375 ounces) in 1913.

GOLD AND PAPER AT THE END OF 1920.

[From the Statist, London, December 3, 1921.]

At the end of 1920 the amount of gold rubles belonging to the State reserve (not including the money and gold articles confiscated from private individuals) was 91,000,000 rubles * * * and the amount of paper rubles in circulation was 1,168,600,000,000.

Note circulation on December 31, 1920 and 1921.

[From Commerce Reports, April 17, 1922.]

	Billions of rubles.
December 31, 1920.....	1, 170
December 31, 1921.....	17, 543

NOTE.—On January 1, 1922, 100,000 paper rubles=1 gold ruble.

SOVIET GOLD SUPPLY DWINDLES TO NOTHING.

[From New York Times, August 30, 1921.]

It is estimated by the Department of Commerce * * * that the value of the gold in the possession of the Soviet Government on August 1 was \$19,040,200. The total value of the gold exported from August 2 to 10 was \$17,775,889, and it is estimated that the balance on hand on August 10 was \$1,264,311, * * * which must virtually have vanished by this time.

The Soviet Government has disposed of about \$175,000,000 worth of gold since February of the present year. The Russian Government gold reserve at the beginning of the World War in 1914 was \$807,500,000. The Russian Government sold \$330,000,000 of this gold to England for Russian credit abroad, with the important agreement that the gold should be returned to Russian use after the war. The old Russian Government also shipped \$2,500,000 of its gold reserve stock to Sweden for credit during the war. Consequently the balance of Russian national gold reserve on hand at the time of the outbreak of the Bolshevik revolution was \$469,000,000. * * *

Starting with this balance, the Bolsheviks received from other sources, mainly through confiscations, additional gold valued at \$177,000,000, so that the total amount of gold in the State bank in Petrograd in November, 1918, was about \$646,000,000. Out of this the Bolsheviks paid to Germany under the terms of the Brest-Litovsk treaty as the first installment of contribution the sum of \$160,000,000. The Siberians also managed to capture \$330,000,000 worth of Russian gold. This left a balance of \$156,000,000 on hand in the possession of the Soviet Government in the summer of 1919. The Soviet managed to recapture \$233,998,519 after the collapse of Kolchak * * * and also came into possession of \$215,000,000 of Rumanian gold which had been sent to Russia for safe-keeping. Consequently the total amount of gold on hand in possession of the Soviet Government at the beginning of 1920 was \$514,998,519. The Soviet authorities * * * early in February of 1921 themselves reported that the balance then on hand amounted to approximately 350,000,000 rubles, or \$175,000,000 * * *.

GOLD EXPORTS FROM RUSSIA.

[From bullion circular of Samuel Montagu & Co., January 19, 1922.]

The Times hears from a well-informed source in Sweden that the gold deposited at Stockholm by the Soviet Government of Russia now amounts to about £9,000,000. This sum, it is thought, will probably be exhausted by April.

[From bullion circular of Samuel Montagu & Co., February 9, 1922.]

The ice breaker *Gladiator* is said by the Central News to have arrived at Stockholm on February 5 last from Reval carrying about £7,500,000 in gold from the Soviet Government, most of it destined for western European countries.

SILVER COINAGE.

[From bullion letter of Samuel Montagu & Co., June 2, 1921.]

The New York Chronicle of May 14 contains press dispatches from Riga, dated May 2, to the following effect:

"Coinage of silver has been authorized by the Russian Soviet Government, it is said in Moscow newspapers received here, the Bolshevik Government having completely reversed its position after having held out for a long time for a complete abolition of money. This was due, it is said, to the desire of the Government to satisfy the peasants, whose ascendancy in Russian affairs is becoming increasingly evident daily. The peasants were for a long time distrustful of paper money, which was turned out so rapidly that an armful of ruble notes was needed for the purchase of a simple article such as a pair of shoes."

In view of the destruction of the ordered economic life of Russia, the mere coinage of metallic money does not insure its circulation. Before an effective currency system can be enjoyed Russia has a long, long way to go.

[From the Numismatist, October, 1921.]

A Copenhagen cablegram states that the Soviet Government of Russia contemplates the issue of silver rubles in September. One silver ruble will have the same purchasing power as 10,000 paper rubles.

PLATINUM MONEY.

[From the Numismatist, May, 1921.]

Russia is issuing platinum money. This is not due to scarcity of other material, but the money is so made because of the scarcity of platinum in the hope that the desire to obtain the scarcer metal will foster outside trade. The new money is also used in domestic business as a means of stimulating traffic, because it is "good" in that country for only 30 days after date of issue, and everybody is eager to get rid of it as soon as possible.

SOVIET CURRENCY AND ITS EXCHANGE VALUE.

[From Commerce Reports, May 18, 1921.]

According to the Posledniya Novosti of April 20, 1921, the Soviet Government prints daily 7,000,000,000 Soviet rubles. The money is printed in Petrograd, in Moscow, and in Kharkov, chiefly in large denominations of 10,000, 20,000, and 25,000 rubles. The old Czar 500-ruble notes are also being printed in large quantities for export uses. On the internal market the Czar rubles are rated high, the 1,000-ruble Czar notes being exchanged for 100,000 to 250,000 Soviet rubles. [From authentic sources we are informed that the Czar ruble in March was exchanging for 137 Soviet rubles, and that \$1 United States money was selling for 15,000 Soviet rubles, none of the exchanges being publicly conducted, of course.]

SPAIN.

The total import of United States gold bullion during the year 1921 was 15,120 pesetas (\$2,918).

The quantity of silver produced from deep mines during the year 1921 was 83,339 fine kilos (2,679,349 ounces).

The amount of Belgian silver coin withdrawn from circulation for recoinage during the year 1921 was 9,825,150 francs (\$1,896,254).

The estimated quantity of gold and silver used in the industrial arts during the year 1921 was as follows: Gold, 3,800 fine kilos (122,170 ounces), valued at 14,000,000 francs (\$2,702,000); silver, 18,000 fine kilos (578,700 ounces), valued at 2,000,000 francs (\$386,000).

No old plate, jewelry, or other old material is accepted by the federal mint for coinage. There exist no statistics as to old gold and silver of that kind melted in the industry.

GOLD COIN STRUCK FOR PRIVATE INDIVIDUALS.

[From *Moniteur des Intérêts Matériels*, Brussels, November 14, 1921.]

The Federal Council issued on November 11, 1921, a decree concerning the minting of gold coin for private individuals. The Federal mint is authorized to execute the coinage provided the amount is not less than 100,000 francs, and the department of

ADDENDA.

finance gives the authorization therefor. The gold remitted can be accepted only with a copper alloy and with the standard fineness of 900 thousandths. The cost of the minting is 13½ francs per kilo of 20-franc pieces, and 19 francs per kilo of 10-franc pieces, for private individuals; whereas for the national bank it is 8 and 12 francs, respectively.

SILVER SWAMPS SWISS.

[From the Commercial & Financial Chronicle, February 26, 1921.]

A Berne cablegram (copyright) to the New York Times said: In the New York Times of January 5 the announcement was made that the Swiss Government was withdrawing from circulation all French, Belgian, and Italian silver 5-franc pieces, and that after the end of April these would cease to be legal tender in Switzerland.

The result of this decision has been a great increase in the smuggling of 5-franc pieces into the country. True, the Government has managed to seize these smuggled coins to the value of several hundred thousand francs, which is an acceptable windfall to its treasury. In the machinery of one motor car crossing the German-Swiss frontier at Schaffhausen 64,000 francs in 5-franc pieces have just been captured. On the Italian, French, German, and Austrian frontiers not a day passes without the capture of cartloads of 5-franc pieces.

But what the frontier guards have managed to confiscate is very little compared with what escapes them. Switzerland is now suffering from an avalanche of 5-franc pieces. The temptation for Austrians to smuggle these coins into Switzerland is naturally extreme, since for each coin they get 500 kronen. The Germans get 50 marks, the Italians 25 lire and the French about 11 French francs.

It is estimated that three-fourths of the 5-franc pieces belonging to the Latin Currency Union are already in Switzerland.

LIQUIDATION OF LATIN UNION FIVE-FRANC COINS (231,985,000 FRANCS) WITHDRAWN FROM SWISS CIRCULATION UNDER THE PARIS AGREEMENT OF DECEMBER 9, 1921.

[By Consul General George H. Murphy, Zurich, February 23, 1922.]

Switzerland retains the collected amount of French 5-franc pieces (130,255,000 francs) until January 15, 1927, after which date these 5-franc pieces can be repatriated to France in quarterly shipments. France is under obligation to pay 20,000,000 francs in gold and the rest in either Swiss 5-franc pieces, gold, or drafts on Switzerland.

As to the 65,405,000 francs in Italian 5-franc pieces, Switzerland has the right to at once melt the 35,405,000 withdrawn from circulation and to recoin it in the form of Swiss 5-franc pieces. It can retain the remaining 30 millions until January 15, 1927, after which date there will follow a five-year period of quarterly shipments and payments. There must be paid by Italy 6,660,000 francs in gold; 23,340,000 in either Swiss 5-franc pieces, in gold, or in drafts on Switzerland. Interest is the same as for France.

As to the 28,915,000 francs in Belgian 5-franc pieces, Switzerland has the right to at once melt and recoin in Swiss 5-franc pieces the 22,915,000 francs withdrawn from circulation. It retains the remaining 6,000,000 francs until January 15, 1927, after which date there will be made quarterly reshipments and payments during five years. Two millions must be paid in gold, 4 millions in either Swiss 5-franc pieces, or gold, or drafts on Switzerland; interest on the same conditions as those for France.

The 915,000 francs in Greek 5-franc pieces will be melted and converted into Swiss 5-franc pieces.

The 6,495,000 francs in small Belgian coins is to be returned to Belgium against payment in 5-franc pieces of the coin union, which can be at once melted and converted into Swiss 5-franc pieces.

France, Italy, and Belgium reserved the right to make premature repayment for the 166,000,000 francs to be returned to them.

On the other hand, Switzerland has reserved the right to sell in whole or in part as metal all the foreign 5-franc pieces which it now holds.

According to the new agreement, the duration of payment is 10 years, during the first 5 of which no returns of coins are required.

TURKEY.

COINAGE OF THE IMPERIAL OTTOMAN MINT.

[By Assistant Trade Commissioner Julian E. Gillespie, Constantinople. In Commerce Reports, May 29, 1922.]

The mint of the Imperial Ottoman Government has coined and placed in circulation since 1844, 78,464,005 Turkish pounds, gold; 16,728,754 Turkish pounds, silver; and 1,312,373 Turkish pounds, copper and nickel. During the reign of Sultan Mahommed V (1903 to 1917) a total of 35,022,386 Turkish pounds was minted.

MONEY AND CIRCULATION—EXCHANGE.

[From Commerce Reports, February 13, 1922.]

Gold, as well as silver, is now seldom seen in the Ottoman Empire, although there are persistent rumors that considerable sums of metallic money have been hoarded and buried, and that a decided turn for the better will draw this money once more into circulation.

Before the war Turkish metallic money in circulation amounted to about 52,000,000 Turkish pounds, and foreign metallic money totaled from 250,000,000 to 300,000,000 francs. There was also in circulation about 1,200,000 Turkish pounds in bank notes, issued by the Imperial Ottoman Bank, fully secured. However, because of the deep-rooted aversion of the Turkish people to paper money, these bank notes circulated only in Constantinople. During the war the Imperial Ottoman Bank relinquished its privilege of issuing bank notes, leaving the responsibility for the issuing of paper money to the Government. During the war paper issues amounted to 161,018,663 Turkish pounds, of which 158,748,567 Turkish pounds was in circulation in January, 1920. About the first of 1921 the paper money was estimated at 154,500,000 Turkish pounds, about one-fifth of which was said to have been lost. The amount of paper in circulation at the present time is probably not far from the above figure. The paper Turkish pound, which had an approximate exchange value of \$0.71 during June, 1921, declined still further until the low value of \$0.41 $\frac{1}{2}$ was reached. It now appears to be slowly rising again, and in December, 1921, had an average value of approximately \$0.59. While the low exchange value of the Turkish pound has been due in some degree to speculation, it has resulted rather from the adverse trade balance existing against Turkey since the armistice.

ISSUANCE OF PAPER MONEY.

[By Trade Commissioner Julian E. Gillespie, Constantinople, June 3, 1922. In Commerce Reports, July 17, 1922.]

* * * There were seven issues of paper money made in Turkey during the war. On August 3, 1914, the Ottoman Government enacted the forced rate of bills of the Imperial Ottoman Bank. Later the Government extended the regular maximum of 2,000,000 Turkish pounds to 4,000,000 Turkish pounds, according to the decrees of September 15 and 28, 1914. When Turkey entered the war (October 23, 1914), the Imperial Ottoman Bank, anxious as to the credit of its own bills, refused any new issue of bank notes. The Turkish Government then financed its war expenses by means of an issue of paper money, which was guaranteed by advances made by Germany.

The first issue, called "money bonds" (6,583,094 Turkish pounds), was guaranteed by an Austro-German advance, which was made in gold (80,000,000 marks from Germany and 47,025,000 crowns from Austria). * * *

The remaining six issues, called "money bills" (182,845,349 Turkish pounds), were guaranteed by means of German treasury bonds, which were labeled in Turkish pounds, and the maturity of which was to be gradually extended over a period of 11 consecutive years following the conclusion of peace. * * *

At the termination of hostilities probably 5,147,919 Turkish pounds of "money bonds" and 153,859,936 Turkish pounds of "money bills," or a total of 159,007,855 Turkish pounds (par value, \$699,634,562), were in circulation. In addition, 20,000,000 Turkish pounds in gold and silver were coined at the mint during the war. Thus, the total amount of money payment in circulation increased from 40,000,000 to over 200,000,000 Turkish pounds.

* * * Since the armistice Turkey, contrary to most of the other countries, has stopped the issuance of paper money, and, taking into account the large quantity of bills which were lost or remained in the territories detached from the Empire, the fiduciary inflation is not excessive.

MEASURES FOR THE STABILIZATION OF EXCHANGE AT CONSTANTINOPLE.

[From Commerce Reports, January 15, 1921.]

A dispatch received recently from Constantinople is to the effect that the critical financial situation still continues. The Turkish Government, acting under an old law, has granted permits to the American branch bank at Constantinople to export about 50,000 pounds of Turkish gold in order to stabilize exchange. It is said also that similar permits may be granted to other banks. It is reported on good authority that the French director of the Imperial Ottoman Bank, in view of the negotiations between the American branch bank at Constantinople and the Ottoman Government, has asked the Ottoman Government on its own initiative to authorize the Imperial Ottoman Bank to export gold.

YUGOSLAVIA.

The total amount of gold and silver used throughout the country for industrial purposes does not exceed the figures 100 and 10,000 kilos (3,215 and 321,500 ounces), respectively, per annum.

The quantity of gold and silver produced from copper ores during the year ended December 31, 1921, was as follows: Gold, 124 fine kilos (3,987 ounces); silver, 496 fine kilos (15,946 ounces).

The coins of Serbia are now legal tender throughout the S. H. S. Kingdom. None of these coins, except rarely the nickel and bronze para pieces, have been in circulation since the armistice. All currency in circulation is paper, either dinar or dinar-kronen (1 dinar=4 kronen) notes and is of the following denominations: 10 paras, 20 paras, 50 paras, 1 dinar, 5 dinars, 10 dinars, 100 dinars, 1,000 dinars. There are also still in circulation, practically entirely in the former Austrian and Hungarian provinces, old Austrian and Hungarian bank notes identical to those formerly in circulation in Austria and Hungary. These Austrian and Hungarian notes are only legal tender in the S. H. S. Kingdom if they bear a stamp of the S. H. S. Government. It may be added that the dinar-kronen notes bear upon both sides their value stated both in dinars and in kronen, the latter value being four times the amount of the former.

RUPEE EXCHANGE.

[Excerpt from 1921 annual report of Consul General Alexander W. Weddell, Calcutta, India, June 15, 1922.]

Prior to 1914 the silver rupee and the convertible rupee note circulated freely, together with a fair quantity of English sovereigns. In order to maintain the artificial parity between the rupee and the sovereign there had been built up in London a gold reserve and the market was being steadied and stabilized constantly through the sale in London of rupee bills on the Indian Government (council bills) or in India of sterling bills on the Secretary of State (reverse councils). However, the advance in the price of silver after 1914 with the consequent absorption of rupees in India placed a severe strain upon the Indian financial structure and the convertible rupee notes were only saved from declaration of inconvertibility by the passing of the so-called Pittman Act by the American Congress under which India made purchases of silver for mintage purposes in America in 1918 to the extent of 200,000,000 ounces.

¹ Rupees converted at old ratio of 15 to the £.

Following this it was thought that some of the difficulties of the situation would pass away, but this was far from being the case. Finally a committee was appointed to advise in regard to the future of Indian exchange, which committee submitted its report in 1919. The report was given out toward the close of the year. Its essential recommendation was the linking up of the rupee to gold (and not to sterling) and the establishment of the ratio between the rupee and gold at the rate of 10 rupees to the sovereign. This report was accepted in the beginning of 1920 and, as will be remarked, changed the official monetary standard of India from 15 rupees to the sovereign to 10 rupees to the sovereign. The result of this policy, allied to many other causes, was to bring about great financial confusion and some of the strongest houses in the country were brought to the verge of bankruptcy. In April, 1920, rupee exchange stood at 2s. 4d. This had dropped at the end of July to 1s. 11d. and the downward movement continued without cessation to the end of the year. Opening in January, 1921, in the neighborhood of 1s. 6d. to the rupee for telegraphic transfers on London, the decline continued until the beginning of March. The market until the end of September showed violent fluctuations, but with an ascending tendency, although in the closing three months of the year it fell sharply and closed at 1s. 3½d. to the rupee.

During 1921 the bank rate varied from 7 per cent down to 5 per cent, closing at 6 per cent.

At the time the committee's report came into effect the Indian export trade was weak; the principal demands for Indian products from abroad were for foodstuffs, and the unfortunate monsoon of the year made it necessary to prohibit exportation in many lines. On the other hand, and as has been suggested above, imports were active and began to pour in, still further complicating the general trade situation and leading to many refusals of goods, the effect of which, however, fell largely on foreign banks having branches in India and which had advanced the irrevocable credits under which shipments were made.

During this period of decline and to meet the disparity existing between its declared gold rate and the exchange rate, the Government had recourse to the sale of reverse councils. It was perhaps anticipated that a reviving export trade would relieve the Government largely of this method of supporting its financial policy, but this hope was not realized. There was a heavy decline in the price of silver, the trade boom of 1919 passed rapidly away, and there was a commercial crisis in Japan which deprived India of a valuable customer for cotton. It was not until September 28, 1920, that the Government decided to reverse its policy to some extent and to sell no more sterling drafts on London (reverse councils); this was followed by the sharp drop to which reference is made above.

CONTROLLING THE RUPEE.

[From The Statist, London, April 8, 1922.]

Amidst the welter of present-day currency problems it is sometimes forgotten that a premature attempt to rectify the exchanges of India and British East Africa, even after a most exhaustive examination of the position by a committee of experts, has in each case proved a signal failure. In the case of East Africa it is no exaggeration to say that the series of alternations made in the currency of Kenya, Tanganyika, and Uganda, already struggling under the world-wide economic cataclysm, has crippled their trade and indefinitely arrested the development of these promising British colonies. These changes involved, firstly, the alteration of the sterling value of the rupee from 1s. 4d. to 2s. during a period of wholly abnormal exchange movements; secondly, the replacement of the rupee as a standard coin by the florin; and, finally, the replacement of the florin by the shilling, not to speak of the enforcement of British treasury notes as legal tender and their subsequent withdrawal. As regards India the recommendations of the committee on Indian currency and exchange, which were adopted by the Government, purported to stabilize the sterling value of the rupee by fixing it in relation to the gold sovereign, which was then, as it is now, for all practical purposes nonexistent as a monetary unit. The governmental action in both cases is characterized more by amateurish empiricism than by scientific foresight.

Fortunately, in the case of India, the statutory changes in the currency were not attended with the disastrous effects that followed the action of the Colonial Ministry as regards British East Africa. The fixing of the rupee-sterling ratio at 10 rupees to the gold sovereign instead of 15 rupees, as formerly, has proved a factor of far less consequence in the open-market exchange rates than similar attempts at exchange control in the case of other countries. But though the maintenance of the new ratio proved altogether beyond the power of the Government, a serious attempt was made to enforce it, which has cost the Indian taxpayer about 35 crores (1 crore = 10,000,000) of rupees through selling sterling credits at rates considerably above those

quoted in open market and by revaluing the gold and sterling securities held in the paper currency reserve. The present value of the rupee is around 1s. 3½d.—even below the pre-war parity. This rate, at present prices for gold, makes a ratio of over 17½ rupees to the gold sovereign, as compared with the new statutory ratio of 10 rupees to the sovereign. Open-market rates could be levered up to the statutory ratio, in the absence of a fresh period of inflation in this country, only by a severe campaign of currency deflation in India, and after the experience of the past two years in the United States and in this country, as well as certain other of the more important nations, it is hardly likely that the Indian Government will attempt so dangerous an operation. They are then faced with two alternatives—either to restore the old ratio immediately or to await the possibility of another kaleidoscopic change in the economic sphere, starting a new upward movement in the rupee exchange.

Any hasty action is to be deprecated while currency and exchange conditions all over the world are in their present unsettled state, but no harm could be done by repealing the act enforcing the 10-rupee ratio with gold, and the writing up of the value of the sterling and gold resources held by the Indian Government, which this would permit, would recoup them for the wholly useless and unnecessary loss entailed in the former revaluation. At the time the Indian currency committee presented their report, in February, 1920, The Statist pointed out the futility of endeavoring to fix the exchange rate between two currencies, each of which was independently undergoing a rapid change in its value expressed in terms of commodities. The truth of this has since been abundantly proved, and thus, if the Indian Government comes to make the change suggested above, of altering the statutory value of the rupee from a tenth part of the gold sovereign to a fifteenth part of the pound sterling, they could not keep open-market rates at the new level and should not attempt to do so. For the purpose of the budget, the Government has taken the rupee as equivalent to 1s. 4d., thus recognizing the academic nature of the statutory ratio. There is no reason why it should not take the additional step of giving legal sanction to the reversion to the 1s. 4d. rate and applying it to all its sterling funds.

The maintenance of the 2s. (gold) ratio was definitely challenged as recently as the present week by the deputy chairman of the National Bank of India at the annual meeting of the shareholders. Having briefly referred to the changes in the East African currency system, he went on to say: "As to India, it is sufficient to point out that the statutory rupee remains at 2s. This was a part of the scheme of currency reform, the adoption of which was recommended by the committee appointed to examine and report on the subject, and although the Government gave effect to it, on paper, perhaps fortunately, it has never come into operation and might well now be replaced by the 16d. rupee with which we were familiar for so many years, and which, moreover, is the basis which the Government has itself adopted in framing its budget for the current year. The statutory rate has, indeed, proved a real hindrance to trade, Indian merchants having frequently made use of it as an excuse for delay in taking delivery of goods which had arrived at their destination in fulfillment of contracts previously entered into which in their view might well be ignored until a purchase of exchange at the Government rate of 2s. could be effected. Free from Government interference, the sterling value of the rupee is left to find its own level, and to-day's (April 4) T. T. (telegraphic transfer) quotation is 1s. 3½d., and a year ago it was 1s. 3½d."

It is to be hoped that this statement, coming from so authoritative a quarter, will influence the Government toward reconsidering the decision taken in 1920.

The chairman of the Mercantile Bank of India, Mr. R. J. Black, at Tuesday's meeting of the shareholders, while advocating no definite line of action on the part of the Government, took exception to the Government's silence on the matter. He said: "We are in the dark as to the policy of the Government in regard to the fixity of the value of the rupee at 2s., which for the time being is anomalous. The Finance Minister of India, in his recent budget speech, carefully abstained from passing any opinion on the future, and the official estimates for 1922-23 were based on an exchange of 1s. 4d., as against 1s. 8d. in the previous year."

¹ Rupees converted at old ratio of 15 to the pound sterling.

[From bullion letter of Samuel Montagu & Co., June 8, 1922.]

Net imports of silver into India in 1921: 55,631,210 ounces.

VALUE OF THE RUPEE.

[From bullion letter of Samuel Montagu & Co., August 4, 1921.]

Considering that the gold equivalent of the Indian rupee is now fixed officially at one-tenth of a sovereign, it is interesting to read in the Times, of India, under date of the 9th ultimo, that the price of sovereigns had advanced to 20 rupees per coin; that is to say, a premium of 100 per cent over their legal-tender value.

GOLD MARKET.

[From Indian Labor Gazette, January, 1922.]

* * * In India, in addition to gold for currency purposes, there is a vast outside bullion market, and this works irrespective of the trade balances, and the level of bullion prices is the main factor in regulating the import and export of bullion, particularly of gold. If the price of gold and silver falls low, inquiries spring up from almost all parts of the country, and, conversely, if the prices are high, large quantities of the precious metals come for sale from all Indian bullion centers to Bombay. In recent months gold to the value of 3.35 crores (1 crore = 10,000,000) of rupees has been imported from Mesopotamia (from April to December, 1921) and 3.23 crores of this amount were in the form of Turkish gold coins. Gold from Mesopotamia was received in payment of exported merchandise—the only way that Persia and Mesopotamia can balance their trade now that exports via Moscow and London are no longer possible for these countries.

NICKEL FRACTIONS AND SMALL NOTES.

[From annual bullion letter of Samuel Montagu & Co., 1921.]

Two recent currency innovations have been distinct successes. The people of India have taken kindly to nickel instead of silver fractions of the rupee. These coins, light and presentable, lessen the cost of providing the small change which is so vital

a link in the daily business of great populations. The other reform, i. e., the issue of 1 rupee and 2½ rupee notes (commonly styled little and big gubs, after Mr. M. M. S. Gubbay, the controller of currency responsible for their birth) seems also to have been welcomed. The 1-rupee note, which at first favored city rather than country life, is now going farther afield, but the 2½-rupee note is not of so robust a habit; possibly a 2-rupee denomination would have been more popular.

CAUCASUS—GEORGIA.

CURRENCY.

[From Commerce Reports, November 14, 1921.]

At present there are in current use in Georgia both the Russian Soviet ruble and the Georgian ruble. Until July these were equal, but now the Georgian ruble is at a discount of 5 to 10 per cent. The Georgian ruble is being printed at the rate of 500,000,000 to 800,000,000 a day, this being the utmost capacity of the presses working overtime.

In June a sum of approximately 5,000,000 rubles in gold was received from Moscow for the three Republics. Georgia's share was some 2,000,000. This gold had evidently been melted down from coin or other gold and is made into small pellets stamped with the year 1919, 1920, etc. * * *

There are no banks operating except the Italo-Caucasian Bank, which keeps open but does practically no business.

The decline in values for local currency is indicated by the fact that on May 24 the Turkish paper lira exchanged for 34,000 rubles, while on July 15 it sold for 89,000 rubles. Each time a boat arrives in Batum the ruble falls sharply because of the demand for foreign currency with which to pay for goods and for passage on the ship as it leaves. The dollar and sterling are relatively cheap since there is no great demand. The dollar is valued at only 2 to 5 per cent more than the Turkish lira, while at Constantinople it is 50 per cent more. Checks, unless guaranteed and stamped by a consul, can not be sold, as people are still distrustful of commercial paper in any form.

CHINA.

THE FINENESS OF THE YUAN DOLLAR.

[By Dr. Frederic E. Lee, Economist Consul, Peking, June 19, 1922.]

During the latter part of 1913 a bureau of currency was formed by the Chinese Government, with Dr. Chang Tsung Yuen as chairman, to consider the question of currency reform. This bureau drew up a draft of national currency regulations which received the approval of the President and the cabinet in January, 1914. These regulations are still supposed to be in force as the currency law of China.

Article 2 of these draft regulations of January, 1914, provides that the unit of the national coin shall be called yuan, and the yuan shall contain six mace, four candareens, and eight li (Kuping weight), or 23.97795048 grams of pure silver. Article 5 provides that the gross weight and fineness of the yuan shall be 72 candareens and 0.900, respectively. The fineness, however, was changed to 0.890 between January,

1914, and the time of the promulgation of the national coinage law—March 18, 1914. The maximum variation in weight and fineness allowed under this law is three thousandths.

The standard dollar under the new national coinage law was first minted at the Tientsin mint in December, 1914. The Tientsin mint was considered the head mint of China until 1920, when it was placed on equality with other mints, but from all records the other mints followed the lead of the Tientsin mint in 1914 and coined yuan dollars with a fineness of nominally 0.890.

Assays made at the Calcutta and Bombay mints showed that the fineness of the Chinese dollar in 1908 (0.89865 on the average) was much higher than that of the dollars minted under the national coinage law since 1914 (ranging between 0.8895 and 0.8914).

The foreign exchange banks of Shanghai in a memorial to the Chinese Government state that from a series of tests made at the Bombay mint it has been ascertained that the Nanking mint dollars average 0.89115 fine and weigh 414.589 grains. These dollars were considered to be equal to those minted by the Wuchang and Tientsin mints. On this basis they suggest to the Chinese Government that for a new standard dollar the weight might be fixed at 416 grains, 0.890 fine. These suggestions, however, have not been put into operation.

THE SHANGHAI MINT LOAN.

[From Commerce Reports, April 21, 1921.]

In order to secure a unified currency throughout China the Minister of Finance and the director of the currency bureau signed on March 4, 1921, an agreement with the Shanghai mint loan banker's group for a loan of \$2,500,000. The composition of this group includes all the leading Chinese banks in north and south China. Shanghai mint treasury notes will be to the value of \$2,500,000 for sale by the banking group, the proceeds to be employed for the establishment and equipment of the Shanghai mint. The Government will receive \$93 for every \$100 note and the notes will bear interest at the rate of 9 per cent per annum. There will be a monthly redemption of the principal from April, 1921, to May, 1924. This redemption, amounting to \$70,000, will be paid each month to the Shanghai branches of the Bank of China and the Bank of Communications.

GOLD AND SILVER PRODUCTION—ANNUAL.

[Estimates of geological survey of China. In London Mining Journal, April 15, 1922.]

Gold, 100,000 ounces; silver, 40,000 ounces.

[From the Mining Journal, London, May 13, 1922.]

The Yuchin Gold Mining Co. is the largest producer in the Province of Heilungkiang. The Umaerho Gold Mining Co., in the Fuma district of this Province, produced annually in the years 1914, 1915, and 1916 more than 40,000 taels. Only about 1,000 taels have been produced yearly since 1916, but reorganization early in 1921 resulted in improvement.

[From London Mining Journal, July 8, 1922.]

* * * Among gold mines there are only two of any importance—the Kumer River gold mine (Hei Lung Kian), 1,055,746 taels, and the Sanksin Gold Mining Bureau (Kirin), 142,055 taels.

ACCOUNTS TO BE MADE IN SILVER DOLLARS AT AMOY.

[From the Numismatist, Federalsburg, Md., September, 1921.]

The Hongkong & Shanghai Corporation at Amoy has issued a notice to the effect that after May 21, 1921, no more accounts will be kept in Spanish currency or chopped yen, and that all such accounts will be transferred at par to "silver dollars, local currency."

During the war, and in consequence of the scarcity of silver in China, most of it having been shipped to India, the Spanish currency remained at about par with Hongkong currency, while the silver (chopped) yen went to a very high premium. For some years the Republican dollar and the chopped yen have been at par in the market. Not long ago the Chinese banks and others in China changed completely from taels to silver dollars, and nearly all transactions were in silver dollars, the Hongkong & Shanghai Banking Corporation being the only institution of any importance keeping accounts in Spanish dollars. Taking advantage of the par values of Spanish dollars and silver, the bank makes this change, which is also possible because the export of the local silver dollar is more feasible. Although the chopped yen is real, it might in time become, like the Spanish dollar, a book unit only; therefore the bank is discontinuing keeping its accounts in chopped yen as well. In the future the "dollar"—that is, the "market dollar"—will mean the same coin or class of coins, whatever that may be.

CANTON.

NEW COINS.

[From the Far Eastern Review, July, 1921.]

Work has begun at the Canton Government mint in the coining of silver 10 and 20 cent pieces. It is reported that the daily output in silver coins amounts to \$350,000.

HANKOW.

The silver coinage executed in 1921 at the Hupeh mint consisted of 4,500,148 yuan dollar pieces (\$2,205,073.)

The amount of silver coin withdrawn from monetary use for recoinage during the calendar year 1921 was 50,000 yuan dollars (\$24,500).

The actual currency is silver.

Highest rate of exchange, \$83.50 United States currency for 100 Hankow taels; lowest, \$58.25; average, \$76.

There was no import or export during 1921 of gold and silver directly from or to foreign countries. The total values of gold and silver imported from and exported to other Chinese ports during 1921 were as follows: Import of gold bullion, 1,915 Haikwan taels (\$1,455); import of silver coin, 2,633,961 Haikwan taels (\$2,001,810); import of silver bullion, 836,467 Haikwan taels (\$635,715); export of gold coin, 2,660 Haikwan taels (\$2,022); export of gold bullion, 6,688 Haikwan taels (\$5,083); export of silver coin, 4,850,229 Haikwan taels (\$3,686,174); export of silver bullion, 1,765,031 Haikwan taels (\$1,341,424).

Of the dollar there are many varieties, foreign and Chinese. The Mexican as well as the yuan dollars are very popular with foreigners for their every day transactions, but are seldom used in large commercial transactions. The small coins are the 10 and 20 cent pieces of silver representing theoretically the tenth and fifth part of one dollar, respectively, while in practice they circulate according to their intrinsic value and the general rule of supply and demand. One might get as much as six 20-cent pieces and some coppers in addition, or eleven 10-cent pieces and a few coppers for one dollar. Notwithstanding the fact that they are nothing more or less than subsidiary coins, they circulate as standard in various Provinces, and are used there for all sorts of transactions and particularly in payment for the products of the country. Of late years the copper coin, inscribed as 1 cent and theoretically worth 10 cash, has added one more element to the already multiform aspect of the currency.

HONGKONG COLONY.

The amount of United States gold coin imported during the year ended December 31, 1921, was £3,244,785 (\$15,790,746).

Approximate stock of gold and silver, also of paper money, used for monetary purposes on December 31, 1921.

The actual currency consists of silver dollars and double coppers, called 20-cash pieces.

CHINESE MINT SCHEME.

[From the Mining Journal, London, October 1, 1921.]

The provincial government of Hunan has appointed the vice comptroller of the mint and the director of River Likin ports as members of a commission which plans to establish a copper mining company in Hunan to supply the provincial mint. All the copper mines in the district of Sinhwa have been allotted to the company for the operation.

MUKDEN.

The quantity of gold produced during the year ended December 31, 1921, was 11,337 fine ounces.

¹ Conversion rate, 1 yuan dollar=\$0.4850, at the 1921 average price of silver, \$0.63117 per fine ounce.

The amount of domestic silver coin withdrawn from monetary use for recoinage during the year 1921 was 1,556,000 yuan dollars (\$754,660).

The silver domestic coinage executed in home mints during the year ended December 31, 1920, consisted of 52,156,000 yuan dollar pieces (\$41,307,552).

The amount of gold coin withdrawn from monetary use during 1920 for recoinage was 1,455,280 yuan dollars (\$1,152,582).

The actual currency consists of silver dollars.

The exchange rates are the same as in Shanghai.

The yuan dollar, one-half yuan, 20 and 10 cent pieces, are at present accepted at face value. All other silver coins are in constant fluctuation, their value in respect to the dollar being determined by the law of supply and demand. Besides subsidiary silver coins, there is the copper currency which is really the currency of the people, but is not in fact subsidiary to the dollar. Two kinds are in universal use: 10-cash pieces (cents), and 1-cash pieces. At present the dollar will buy 150 cents or 1,500 cash.

PEKING.

Silver coinage executed during the year 1920.

GOLD STOCK.

[From Bankers' Magazine, New York, June, 1922.]

Combined gold holdings of the Government and the Bank of Japan in December, 1921: 2,080,000,000 yen (1,225,000,000 at home and 855,000,000 abroad).

DEPLETION OF GOLD HOLDINGS.

[From Commerce Reports, March 27, 1922.]

As a result of the continued excess of imports, Japan's gold reserve has been decreasing rapidly. The combined holdings of the Government and the Bank of Japan, at home and abroad, on January 31, 1922, totaled 2,038,000,000 yen, a decline of 42,000,000 yen during the month. The entire decline was in holdings abroad, of which Government holdings declined 34,000,000 yen, as compared with December 31, 1921, and Bank of Japan holdings declined only 8,000,000 yen.

Production of gold and silver of Japan, Chosen, and Taiwan in 1920 and 1921.

There is no premium on gold coins as compared with the actual currency consisting of silver coins and bank notes, scarcely any gold coins having ever been in actual circulation. Foreign gold coins, however, are dealt in for hoarding and for industrial and art purposes, and usually command a premium as compared with their mint value expressed in local currency.

The premium on sovereigns ranged to 30 per cent in 1920 and from 28 per cent to 40 per cent in 1921. The premium on eagles ranged from 10 per cent to 30 per cent in 1920 and from 20 per cent to 33 per cent in 1921.

PALESTINE.

The estimated amount of foreign and domestic gold and silver coin used in the industrial arts during the year ended December 31, 1921, was as follows: Gold, 8,000 Egyptian pounds (\$39,545); silver, 15,000 English pounds (\$74,147).

The stock of gold and silver used for monetary purposes is unknown. The amount of notes of banks of issue in circulation on December 31, 1921, is estimated at 1,000,000 Egyptian pounds (\$4,943,100).

The actual currency consists of Egyptian paper pounds and piasters.

Premium on gold: Highest, 50 per cent; lowest, 20 per cent; average, 35 per cent.

EXPORT OF GOLD—CURRENCY.

[From The Statist, London, September 3, 1921.]

The original prohibition on gold exports has been rescinded, and no effort is made to hinder the circulation of foreign currencies. Legal tender has been accorded, however, to only the Egyptian pound and the British sovereign.

¹ Of this figure very little is estimated to be still in existence, owing to the native habit of converting into ornaments and also melting down by silversmiths.

The currency of the country consists mainly of Straits silver dollars and Straits notes of various denominations for one dollar up. These are not included.

The amount of gold leaf and silver coin imported from Singapore during the year 1921 was as follows: Gold, 11,350 Straits dollars (\$6,445); silver coin, 50,000 Straits dollars (\$28,390).

MONETARY SYSTEM.

Straits notes: 1,000, 500, 100, 50, 10, 5, 1 dollar.

Sarawak notes: 50, 25, 10, 5, 1 dollar, legal tender to any amount.

Silver: Silver Straits dollars and Sarawak subsidiary silver coins of 20, 10, 5 cents (50 cents no longer coined).

Nickel: 10, 5, 1 cent.

Copper: 1 cent.

SIBERIA.

The coinage executed in home mints during the year ended December 31, 1921, was as follows: Gold (5, 10, and 15 ruble coins), 22,975 rubles (\$11,823); silver (1 ruble and 50 kopeck pieces), 6,712 rubles (\$3,454).

STRAITS SETTLEMENTS.

¹ Including 1,718,471 Straits dollars in United States gold coin.

SYRIA.

No fundamental change has been made during the year 1921 in the monetary system of the States of Syria and Libau placed under a French mandate. To complete the system, the Bank of Syria has been authorized to put in circulation nickel coins of the one-half Syrian piaster to replace the entirely depreciated Turkish coins which have almost disappeared from circulation in many places.

The Turkish gold and silver coins continue to circulate in the regions of Damas and Alexandreta; but the silver coins (mejidie), whose importation is forbidden, are in disfavor.

The circulation of Egyptian paper money is forbidden in all the territories placed under a French mandate.

The circulation of Syrian paper money on December 31, 1921, amounted to 10,081,316 Syrian pounds (\$38,913,880).

AFRICA.

ABYSSINIA (ETHIOPIA).

Gold is washed by the natives by hand from the streams, but it is quite impossible to say what quantity is thus produced. The fineness of the gold is usually 0.940. No silver is produced, except as found in the gold.

Stocks of notes of banks of issue used for monetary purposes on December 31, 1921: In home banks, 21,045 thalers; in circulation, 193,720 thalers; total, 214,765 thalers (\$101,882).

The actual currency consists of silver dollars.

The Maria Theresa dollar coined in Austria and bearing the date of 1780 is the exchange medium used throughout Abyssinia. In 1897 and 1898 a quantity of coins bearing the effigy of the Emperor Menelik II were minted in Europe; this coin, although containing slightly more fine silver than the Maria Theresa dollar, was never greatly favored by the populace, and no fresh mintings took place, with the result that the coin is now becoming somewhat scarce.

The Maria Theresa dollar weighs 28.0666 grams, 0.833 fine; the Menelik dollar 28.075 grams, 0.835 fine.

Coins bearing the effigy of Menelik II of fineness similar to the Menelik dollar are also in circulation of the value one-half, one-fourth, and one-twentieth dollar, the weights being proportional. The coin last mentioned, owing to the demand for small change circulates above its intrinsic value and toward the end of 1921 the supply fell far short of the demand to the point of raising the piaster to double its intrinsic value. The so-called "double piaster," in reality one-eighth dollar, was minted but never put into circulation.

A small copper coin bearing the effigy of Menelik II also exists but is rarely seen; it is said to run 100 to the dollar and weighs 5 grams.

The Maria Theresa dollar is accepted in all but the most remote parts of the country, and it is closely followed in popularity by the Menelik piaster. The other coins may be said to circulate only in the vicinity of Addis Ababa and even there in some cases with difficulty.

At one time various articles, such as bars of salt and cartridges, were used as monetary mediums. This practice now seems to be dying out in the case of cartridges, possibly owing to the growing scarcity.

Strictly speaking, none of the coins mentioned can be said to be legal currency as there is an entire absence of any comprehensive laws governing the subject, and the monetary mediums circulate simply on their merits as viewed by the community.

The Bank of Abyssinia issues bank notes representing dollars, and by its concession these are declared to be legal tender.

Owing to the prohibition against export of coin, the exchange value of money in Abyssinia does not follow the price of silver abroad. On December 31, 1921, the exchange value of the dollar (Maria Theresa or Menelik) was about 11.50 dollars per £1, or equivalent to a bullion value of silver of about 25½d. per standard ounce.

The export of silver coin to Aden during 1921 was \$45,000, which represents the value of a dispatch specially permitted, as the export of coin is prohibited. It is known, however, that comparatively large sums in silver Maria Theresa dollars are smuggled out of the country, mostly destined for Aden and Bombay. The amount of gold bullion exported is unknown, but it may approximate 10,000 or 12,000 ounces.

ALGERIA.

Character of stock.	Value.
Gold and silver coin in Bank of Algeria.....	\$13,774,009
Bank of Algeria notes in Algeria and Tunisia.....	187,750,685

The gold and silver coin held in Algeria is practically all in the official bank, the Bank of Algeria. No gold is in circulation and little silver, except some light-weight old coinage. There are a few notes of the Bank of France which circulate. As the Bank of Algeria is authorized to issue currency up to 1,300,000,000 francs (\$250,900,000), the difference between this sum and the note circulation, i. e. 327,198,525 francs (\$63,149,315), is held as reserve stock.

The actual currency consists of paper francs.

Premium on gold: Highest, 48; lowest, 42; average, 45 paper francs for 20 francs gold.

No gold or silver has been imported during 1921. The exports were as follows: 216 kilos of gold and silver to Morocco, 373 kilos of gold and silver to France.

BELGIAN CONGO.

The quantity of raw gold used in the industrial arts during the year ended December 31, 1921, was 282.3 kilos (9,075 ounces).

The quantity of gold and silver produced from the mines during the year ended December 31, 1921, was as follows: 2,044 fine kilos (65,715 ounces), valued at \$1,358,449; silver, 181 fine kilos (5,819 ounces), valued at \$3,673.

Stock of silver coin and bank notes in circulation on December 31, 1921: Silver coin, 25,860,000 francs (\$4,990,980); notes issued by the Bank of Belgian Congo, 38,714,490 francs (\$7,471,897).

The Congo gold is sold in foreign markets. The part sent to Belgium for use in the industrial arts is sold at the London market price.

The export of gold in 1921 was 2,760.4 kilos of raw gold yielding 2,484.4 kilos of fine gold (79,873 ounces) and 220.8 kilos of silver (7,099 ounces).

GOLD DISCOVERY.

[From bullion circular of Samuel Montagu & Co., March 23, 1922.]

The Congo has become a factor in the world's production of gold, though its production has not yet reached £500,000 a year. The following extract from the Times of to-day is therefore well worth noting: "An extensive mineralized area has been discovered by prospectors of the Mils-Congo Syndicate, which belongs to the Tanganyika concessions group. The discovery is described as of alluvial gold, which is said to have been traced in several rivers. What is believed to be the source of this gold has also been discovered in the form of an auriferous belt of rocks extending several miles. An old working carrying copper and gold has also been discovered, with evidence of an ancient copper-smelting industry in the vicinity."

[From the Mining Journal, London, January 28, 1922.]

An important discovery of gold is reported to have been made at the Kilo-Moto mines, in the Belgian Congo, the number of lodes uncovered being, it is stated, 79, of which 37 contain free gold.

BRITISH SOMALILAND.

Approximate stock of silver coin and Government notes used for monetary purposes on December 31, 1921.

Character of stock.	In Govern- ment treas- ury.	In circula- tion.	Total used for monetary purposes.

	\$97,320	\$227,080	\$324,400
Government notes.....	<i>Rupees.</i>	<i>Rupees.</i>	<i>Rupees.</i>
United States equivalent.....	23,000	200,000	223,000
	\$7,461	\$64,880	\$72,341

¹ Converted at rate of 15 rupees to the £.

The actual currency is the same as in British India. The premium on gold depends on the rupee value of the British sovereign in London. British sovereigns are the only gold coins used in Somaliland, but the amount thereof is infinitesimal and they have practically disappeared since the war. British coins are not legal tender in Somaliland.

The amount of silver coin imported from and exported to Aden, Arabia, during the year 1921 was as follows: Imported, 42,430 rupees (\$20,649); exported, 1,335 rupees (\$650).

BRITISH WEST AFRICA.

WEST AFRICAN CURRENCY DURING 1921.

[From Bankers' Magazine, London, February, 1922.]

* * * One of the results of the trade slump has been the restoration of convertibility to the notes issued by the West African Currency Board. Silver coin to the nominal value of several million pounds has returned to the banks, and the notes held by the public and by the banks do not now exceed £1,500,000 as compared with £4,000,000 in November, 1920, and a maximum of over £9,000,000 reached in February, 1920. Nearly all the 1's and 2's notes which were issued when there was a dearth of coin have been recovered from circulation. The currency board, after withdrawing from circulation and returning to England silver coin nominally valued at £2,650,000, has not found it practicable to continue the exchange of silver coin for alloy coin and it is considered that difficulty may be created by the continuance in circulation of both coins. The total shipments of alloy coin made to the coast by the currency board up to November, 1921, amounted to £2,922,300, and there is no longer any scarcity of coin but quite the reverse, while nickel coin has returned from circulation in embarrassing quantities and it has been impossible to provide adequate strong room accommodation for it.

GAMBIA.

LAWS AFFECTING THE CURRENCY.

By the Sierra Leone and Gambia coinage order, 1920, it was provided that, in addition to the local silver coins to be coined under the order of 1913, there shall be coined, for use in the colonies and the protectorates, coins of mixed metal of the same denominations and of the same standard weights as those specified for the purpose of the said local silver coins in the first schedule to the order of 1913; and that the mixed metal coins shall be current and legal tender in the colonies and in the protectorates in the same manner in all respects as the said local silver coins.

By the Sierra Leone and Gambia coinage (No. 2) order, 1920, the fineness of the silver coins was reduced from 925 to 500 thousandths.

The imports of silver coin from the Canary Islands during the year ended December 31, 1920, amounted to £513 (\$2,497).

The coins in use are as follows: British and West African silver pieces of 2s., 1s., 6d., 3d.; French 5-franc silver pieces current at 3s., 10½d.; British West African alloy pieces of 2s., 1s., 6d., 3d.; British West African nickel bronze coins of 1d. and ½d.

Stock of government notes used for monetary purposes on December 31, 1921: Reserve, £747,574 (\$3,638,069); in circulation, £73,970 (\$359,975).

Gold is not in use.

The amount of silver coin exported during the year 1921 was £132,800 (\$646,271).

The French 5-franc silver piece has been demonetized as from January 31, 1922.

GOLD COAST.

¹ Held as reserve stock.

The amount of gold bullion exported to Great Britain during the year 1921 was £855,097 (\$4,161,330).

NIGERIA.

The estimated quantity of new gold bullion used in the industrial arts during the year ended December 31, 1921, was 100 fine ounces, valued at £650 (\$3,163).

The quantity of gold produced from placer mining during the year 1921 was 218 fine ounces, valued at £1,050 (\$5,110).

The stock of silver coin and government notes used for monetary purposes on December 31, 1921, was as follows: Silver coin, £115,644 (\$562,782) in home government treasuries and £4,497,424 (\$21,886,714) in circulation; Government notes in circulation, £187,565 (\$912,785). In addition, there are notes in reserve to the amount of £1,629,500 (\$7,929,962).

There is no gold in circulation. The actual currency consists of currency notes, silver coins, alloy coins, nickel, bronze coins, and manillas.

1919.....	67,300,000
1920.....	40,400,000
Gold reserve against note, 1921.....	£3,418,000

GOLD RESERVE.

[From bullion circular of Samuel Montagu & Co., August 10, 1922.]

It is announced that gold earmarked at the Bank of England during the war as part of the National Bank of Egypt reserve against its bank notes is being transmitted to Egypt, there to be held instead of in London as during the war. The amount of the gold holding against these Egyptian notes on December 31 last was 3,339,572 Egyptian pounds (\$16,507,838).

FRENCH MOROCCO.**PAPER MONEY.**[From *Moniteur des Intérêts Matériels*, Brussels, August 22-23, 1921.]

The paper money, called Hassan peseta and issued by the State Bank of Morocco, has been withdrawn from circulation between March 20 and May 20, and demonetized beginning from the latter date. The Bank of Morocco has been authorized to issue, in replacement of this money, a Moor franc, being legal tender only in Morocco. The Hassane pesetas were bought up by the State Bank at the rate of 2 francs per peseta.

Note circulation at the end of 1921.[From *El Economista*, Madrid, July 1, 1922.]

KENYA COLONY AND PROTECTORATE.**LAWS AFFECTING THE CURRENCY.**

According to Government notice No. 218 of June 8, 1921, florin coins, although legal tender, will not be issued or used for redemption of rupees in the colony and protectorate of Kenya. The Uganda Government is, however, making use of florin coins and any which find their way into Kenya will be freely exchanged but will not be reissued.

By the Kenya and Uganda (currency) order, 1921, the British East Africa shilling shall be the standard coin of the colony and the protectorates; the shilling shall be legal tender for the payment of any amount, the 50-cent pieces up to 20 shillings, and coins of lower denominations up to 1 shilling; sums payable in pounds may be paid in shillings at the rate of 20 shillings to the pound, and sums payable in rupees or florins may be paid in shillings at the rate of 2 shillings to the florin or rupee and 2 cents of a shilling to 1 cent of a florin.

By the East Africa and Uganda (currency) (No. 2) order in council, 1920, the silver rupee of the late Imperial British East Africa colony, and British India silver rupee, half rupee, and quarter rupee ceased to be legal tender in the colony and protectorate of Kenya on June 22, 1921.

CIRCULATING MEDIUM.

[By Consul William L. Jenkins, Nairobi, Africa, July 14, 1922.]

The silver rupee was the pre-war unit of currency and was normally worth 1 shilling 4 pence. During the war the value of silver increased inordinately and the rupee rose to the abnormal value of 2 shillings 11 pence. This sudden rise caused consternation in the colony as well as in India, with the result that the rupee was stabilized as the equivalent of 2 shillings, on the theory that it would never return to normal. It is now slightly below normal. The consequent chaos in financial and business circles can be easily imagined. The cost of living has been automatically increased 50 per cent since the pound sterling was made the equivalent of 10 instead of 15 rupees. Rents, contracts, bank loans, and prices of goods which had been arranged on the 15-rupee basis were suddenly placed on the 10-rupee basis. Then the rupee was demonetized and, as East African florin, was substituted at a fixed value of 10 florins to the pound sterling. Silver rupees ceased to be legal tender and the secret import trade in them which had assumed large proportions after their silver value in India had fallen below 2 shillings was rendered unprofitable. On January 1, 1922, the unit of currency was again changed, this time to the East African shilling, a different coin from the English shilling but with the same value. Silver and paper shillings were not put into circulation, however, until the early part of June. The former florin was divided into 100 cents; the current shilling is also; and whenever cents are mentioned in business transactions the question is invariably asked, "Cents of a florin or cents of a shilling?" The confusion is made still greater by the fact that the new silver shilling is practically the same size and has the same designs as the silver florin, and some of the smaller denominations, such as the new 10-cents-of-a-shilling pieces, are exactly the same size and have the same designs as the old 10-cents-of-a-florin coins. The only difference is in the metal, one being made of nickel and the other of copper.

LIBERIA.

There is no mint in Liberia, and neither gold nor silver is produced in quantities.

A limited amount of gold and silver coin is made into jewelry annually by natives, but there is no means of knowing what this quantity actually is with any degree of certainty.

The British gold coins have been replaced by British paper and silver. There is no appreciable demand for the gold pound, as it may only be gotten at a premium ranging from 7 to 12 shillings to the pound.

Premium on gold during 1921: Highest, 32; lowest, 27; average, 29.

NYASALAND PROTECTORATE.

The amount of gold and silver coin in home banks on December 31, 1921, was as follows: Gold, £116,573 (\$567,303); silver, £196,656 (\$957,026).

PORTUGUESE WEST AFRICA—ANGOLA.

MONETARY SYSTEM.

[From Boletim Oficial Da Provincia De Angola, May 14, 1921.]

Decree No. 13 of May 7, 1921:

Article 1. The monetary unit of the Province of Angola continues to be the gold escudo established by the decree of May 22, 1911.

Art. 2. The principal coins circulating in this Province will be the silver escudo and half escudo, which may be replaced by equivalent coins made of pure nickel or nickel-silver alloy.

Art. 3. The subsidiary coins will be made of copper-nickel in denominations of 20 and 10 centavos, and of copper in denominations of 5, 2, and 1 centavo. The weights, dimensions, and fineness of these coins will be the same as in equivalent coins made of the same alloy and being legal tender in the mother country.

Arts. 5 and 6. The escudo and half escudo will be unlimited legal tender in the Province, and the copper coins will be legal tender up to 3 escudos.

Art. 7. No foreign coins will be allowed to circulate in the Province.

Art. 8. Until December 31, 1923, the coins of the mother country will circulate in the Province conjointly with the coins of the latter.

Art. 9. The Province of Angola may issue notes of less than 1 escudo.

Art. 10. The circulation of the 50, 20, 10, and 5 centavo notes and other notes of the Banco Nacional Ultramarino will cease on December 31, 1921.

NORTHERN RHODESIA.

The quantity of gold and silver produced from deep mines during the year ended December 31, 1921, was as follows: Gold, 1,383 fine ounces, valued at £7,071 (\$34,411); silver, 8,867 fine ounces, valued at £3,002 (\$14,609).

The amount of gold and silver in home banks on December 31, 1921, is estimated at £10,000 (\$48,665).

Exportation of gold and silver coin, except as personal cash in amounts not exceeding £5 in gold and £2 in silver, is prohibited. The exportation of silver bullion is likewise prohibited.

The import of gold and silver coin during the year 1921 was as follows: Gold coin from South Africa, £5,500 (\$26,766); silver coin from Nyasaland, £7,000 (\$34,066); and from South Africa, £7,400 (\$36,012).

SOUTHERN RHODESIA.

The quantity of gold and silver produced from placer mining during the year ended December 31, 1921, was as follows: Gold, 585,525 fine ounces, valued at £3,217,275 (\$15,656,869); silver, 152,989 fine ounces, valued at £19,841 (\$96,556).

Premium on gold: Highest, £1 : 5; lowest, about 19 shillings.

The export of gold and silver bullion to Great Britain during the year 1921 was as follows: Gold, £3,217,275 (\$15,656,869); silver, £19,841 (\$96,556).

UNION OF SOUTH AFRICA.

PRODUCTION OF SILVER DURING THE PERIOD 1910-1921.

[From bullion letter of Samuel Montagu & Co., May 18, 1922.]

The figures below show how intimately the extraction of silver is bound up with the treatment of base metals. The larger the production of the latter, as a consequence of active demand or favorable mining conditions, the greater also the production of silver.

Year.	Zinc.	Lead.	Silver.	Year.	Zinc.	Lead.	Silver.

A very small amount of gold or silver coin is brought into the colony by tourists and is shipped out again, but there is no way to determine the amount. The silver held by the Banque de L'Indo-Chine at Papeete is withheld from circulation. By law the bank last referred to has a monopoly of note issue and its notes are the only legal tender of the colony, even to the exclusion of the notes of the Bank of France.

Gold is at a premium, although the giving or taking of a premium on gold is forbidden by law.

A small amount of gold or silver coin left in the colony by tourists was shipped back to the country of origin—New Zealand, Australia, or the United States. The export of gold is, however, prohibited by law.

The colony has no coins of its own.

SUMMARY OF WORLD STATISTICS.

WORLD'S INDUSTRIAL ABSORPTION OF GOLD.

[Extract from bullion circular of Samuel Montagu & Co., London, England, January 12, 1922.]

The use of gold throughout the world for industrial purposes is commented upon by the Trade Record, published by the National City Bank of New York. After stating that the normal use is large, the Record adds that studies of this subject made by the United States Mint Bureau in the years immediately preceding the war indicated that the world's industrial consumption of gold had aggregated about \$2,000,000,000 in the short period 1890-1910, of which about 20 per cent was used in the United States. In the occidental world alone the total consumed for manufacturing purposes was about \$1,500,000,000 in the 20-year period, and an estimate for the Orient, chiefly India, brings the total world consumption in the 20-year period up to fully \$2,000,000,000. While much of the gold entering India disappears and is reported as "buried," the Indian Government states officially that the uncoined gold imported into India may be considered as being used for ornaments and manufactures, and the Statesman's Yearbook of 1921 in recording the heavy gold imports of India remarks that "gold is used chiefly in the form of ornaments." These figures, which indicate an average world consumption of about \$100,000,000 per annum, throw an interesting sidelight upon that much discussed question of "what becomes of the gold." World statisticians estimate the total outturn of gold since the discovery of America at slightly more than \$18,000,000,000, while the annual studies of the United States Mint Bureau regarding gold monetary stocks in all the countries of the world have never disclosed the existence of more than \$8,500,000,000 as the grand total of visible gold monetary stock for which records can be had. With a record of over \$18,000,000,000 of gold produced and less than \$9,000,000,000 known to exist in monetary form or as a basis for currency, it is quite apparent that the share of world gold utilized for other than monetary purposes is larger than usually supposed.

LEAGUE OF NATIONS.

COINING OF GOLD FRANC.

[From Bradstreet's, New York, December 24, 1921.]

What is believed to be the smallest modern gold coin in the world has just been minted at Geneva, according to the Associated Press. It represents the gold franc on which the budget of the League of Nations is to be calculated. It is octagonal in form, and on one side are engraved the initials "S. D. N." (Société des Nations). Its weight is 0.03225805 of a gram, and its value is about 2 cents in American money. A pound would require 13,200 such coins. This franc is said to be not intended for metal currency, but to be merely an expression of value.

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY, AT THE CLOSE OF THE YEARS 1920 AND 1921.

The following compilations have been made from such data as are available—avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coin as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted to bullion.

[Stated in United States dollars—(000 omitted).]

¹ Estimated on basis of date considered reasonably reliable

² Estimated on basis of date considered reasonably reliable

¹ Estimated on basis of date considered reasonably reliable.

² Fluctuates with the price of silver.

³ Feb. 28, 1922.

⁴ June 30, 1921.

⁵ End of September, 1921, in Banco de la Republica.

⁶ Oct. 8, 1921.

⁷ State bank.

⁸ Five-franc pieces only.

⁹ Monetary standard not established.

¹⁰ Bank of France.

¹¹ Germany holds 814,000 fine kilos of silver abroad (26,170,100 ounces, valued at \$16,517,719)

¹² Polish mark has no par value. Converted as the equivalent of the German mark.

¹³ 17,543 billions of rubles.

¹⁴ In Government treasury.

¹⁵ Incomplete.

¹⁶ In banks.

¹⁷ Figures given represent each country's stock at the end of the year, except when otherwise indicated.

¹⁸ Population figures are from the Statistical Abstract of the United States, 1921.

¹⁹ Blankets indicate no figures available, rather than no stock. Gold held abroad as follows: not included in the above figures (presumably reported by the country having actual possession): Egypt, \$15,831,811; Italy, \$33,155,980; Japan, \$426,217,500; Straits Settlements, \$3,763,686; British Honduras, \$89,000; Yugoslavia, \$39,913,254 (gold and silver); Bank of France, \$376,034,331; Chile, \$12,511,178; Peru, \$14,142,910; Honduras, \$300,000; Argentina, \$3,977,870; Union of South Africa, \$8,500,000 (gold and silver).

GOLD RESERVES OF SELECTED COUNTRIES IN 1914 AND 1921.

Production of gold and silver in the world since 1860.

[The annual production of 1860 to 1872 is obtained from 5-year period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint.]

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
1860.....	6,486,262	\$134,083,000	29,095,428	\$39,337,000
1861.....	5,949,582	122,989,000	35,401,972	46,191,000
1862.....	5,949,582	122,989,000	35,401,972	47,651,000

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1920

REPORT OF THE DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 14, 1920.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1920, being the forty-eighth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1919.

OPERATIONS OF THE MINTS AND ASSAY OFFICES.

COIN DEMAND.

The fiscal year ended June 30, 1920, was another record year for the Mint Service as regards the number of pieces of coin manufactured, the domestic coinage totaling 733,583,150 pieces as compared with 434,028,458 in the prior year and 714,139,119 in the fiscal year 1917-18, the latter year having made the previous high record. As in other recent years the demand for 1-cent pieces was chiefly responsible for the large output, this year's total being 512,607,000 pieces (over 1,757 tons), compared with 343,070,300 and 445,628,201 pieces in 1919 and 1918, respectively.

The coinage executed for foreign governments totaled, in the fiscal year under review, 76,125,334 pieces, compared with 103,114,195 and 52,748,341 pieces in 1919 and 1918, respectively. For the first time since 1916 gold coins (other than memorial issues) were executed, the value of the same being \$16,990,000.

PLANT IMPROVEMENTS.

In order to meet the enormous demand for coin made upon the Mint Service during recent years, which demand has not yet shown signs of diminishing, the director has given much time during the past fiscal year to personally devising and supervising installation of improved methods and appliances for increasing the capacity of the coinage mints. These improvements include the use of large capacity electric melting furnaces in lieu of small gas and oil burning furnaces; mechanical conveyors in lieu of hand-propelled, heavily loaded trucks; rearrangement of floor space and of machinery so as to facilitate and expedite operations; and addition of new machinery.

Partial results of these improvements are evidenced by the materially increased output of the Philadelphia Mint, where the coin manufactured exceeded the prior year's product by 46 per cent and

exceeded the output of the year 1917-18 by over 16 per cent. As compared with the 1915 record, that for 1920 gives increase of coinage output, in number of pieces, as follows: Philadelphia Mint, 468 per cent; San Francisco Mint, 904 per cent; Denver Mint, 179 per cent; combined, 446 per cent. At the Philadelphia Mint alone the output during the fiscal year just closed, in number of pieces, exceeded 3.8 times the combined output of all three coinage mints in the fiscal year 1915, the figures compared being 565,549,584 and 148,205,097 pieces, respectively. These increases were made with but 31 per cent increase in number of employees (536 on June 30, 1915, and 704 on June 30, 1920), and operating two shifts—some of the processes running 16 hours daily and others 24 hours—part of the time. At the San Francisco and Denver Mints methods similar to those in use at the Philadelphia Mint are being installed, and improvements are also being made at the New York Assay Office.

SILVER OPERATIONS UNDER PITTMAN ACT.

Subsidiary silver coin demands necessitated melting, under the terms of the Pittman Act of April 23, 1918, an additional 10,000,000 silver dollars at the Philadelphia Mint, which operation was begun December 5, 1919, and completed March 22, 1920. These dollars were allocated or sold to the Director of the Mint at face value; their manufacture into subsidiary silver coin will produce a profit of \$692,068.43. This operation gives a total of 270,121,554 dollars melted under this act.

The repurchase of silver under the terms of the Pittman Act, to replace the dollars melted, was begun the latter part of May, 1920, when the market price of silver dropped below \$1 per fine ounce, the minimum price provided in that act for Government sales and the fixed price provided for Government purchases. By June 30, the end of the fiscal year, 4,087,080 ounces, fine, had been repurchased and stored under the terms of the act. The act provides for the repurchase of the same quantity as contained in the dollars melted, about 208,000,000 ounces, fine.

While the Government will neither gain nor lose on the sale and repurchase of the silver, the producer of domestic silver gets the benefit of the fixed price mentioned above when the market price goes below that point, thus tending to stabilize domestic production.

The price of silver rose with considerable regularity from the beginning of the fiscal year until a price surpassing all definitely known records was reached, in New York, on November 25, 1919, the rise being from \$1.08 to \$1.38½. The maximum price in London, 89½ pence, was reached February 11, 1920. The principal cause for the rise appears to have been the demand in China. The lowest price of the fiscal year for other than product of United States mines was reached, in New York, on June 16, 1920, 81½ cents; in London on June 15, 1920, 44 pence. It is understood, however, that sales were made as high as \$1.42 per ounce in San Francisco.

The coining value of silver, for United States dollars, is \$1.29+ per ounce; and for United States coins below the dollar, \$1.38+ per ounce; therefore the price of silver reached the point where our principal metallic circulating medium was menaced by the prospect of going to the melting pot for realization to the holder thereof of

the profit incident to greater bullion value than face value. At this time, the Treasury, acting in cooperation with the Federal Reserve Board and the Federal Reserve banks, arranged to release silver dollars to be employed in regulating our exchanges with countries having a silver monetary standard. A copy of the public statement announcing these arrangements dated December 6, 1919, is as follows:

Announcement was made to-day that under arrangements made between the Treasury and the Federal Reserve Board, standard silver dollars that are free in the Treasury will until further notice be delivered against other forms of money to the Division of Foreign Exchange of the Federal Reserve Board, which will, through the Federal Reserve Bank of New York, cooperating with the branches of American banks in the Orient, employ such dollars in regulating our exchanges with silver standard countries.

This arrangement does not, of course, affect the redemption of outstanding silver certificates in standard silver dollars.

About 13,000,000 dollars of silver went to the Orient under these arrangements, while from November, 1919, to May, 1920, the silver dollars leaving the country totaled over 29,000,000.

The silver coins of many European and other countries are understood to have practically disappeared from circulation during this period of high silver prices. The price of silver remained above the melting point, for dollars, until early in March, 1920, then gradually receded until, in May, it went below the price of \$1, fixed in the Pittman Act for the purchase of bullion to replace the dollars melted under the terms of that act. The price for other than domestic product remained below \$1 for the remainder of the fiscal year, the lowest point, 81½ cents, being reached June 16, 1920, as stated above.

DEPOSITS OF GOLD AND SILVER.

The number of deposits received during the fiscal year 1920 has exceeded those of the prior year, but increases at New York, Philadelphia, and San Francisco were partially offset by reductions at Denver and Seattle. The increases have probably been due largely to imports, while reductions are doubtless reflections, to a considerable degree, of the decreased production from mines incident to high producing costs and a fixed selling price for gold. The price of \$1 per ounce for domestic silver, established by the Pittman Act, has resulted in the opening of additional silver mines.

REFINERIES.

The New York and San Francisco refineries operated during the entire fiscal year, while the one at Denver remained closed after February, 1920. Beginning with May, 1920, the bullion deposited at the Seattle, Boise, Helena, Salt Lake City, and Deadwood assay offices, which formerly was sent to Denver for refining, was diverted to San Francisco.

PERSONNEL.

Many experienced and valued employees, particularly those with statutory compensation, have been lost to the Mint Service during the past year by reason of the inadequate compensation which it was possible to allow. Patriotism kept them during the war, but the increasing living costs, with but very inadequate increases of compensation, have finally driven them to seek and obtain larger income

in private employ. It has been possible and necessary to make material increases in the pay of per diem employees, but the salaried employees, who were supervising and directing the work of those on a per diem basis, could not be increased beyond the small bonus of \$240 per annum also paid to per diem workers. This situation should be adequately remedied at the earliest practical date to avoid further embarrassment to the service. On June 30, 1920, 117 fewer persons were employed in the mints and assay offices than on the corresponding date of the prior year; since the above date further material decreases in the number of employees have been made.

INSTITUTIONS OF THE MINT SERVICE.

No change has been made for several years in the number of institutions operated—coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which has had an unusually large trade in bars of fine gold; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Seattle, Boise, Helena, Salt Lake City, and Deadwood, these being bullion purchasing agencies for the large institutions. Refineries were operated at the New York, San Francisco, and Denver institutions.

GOLD OPERATIONS.

The value of the gold acquired by the Government at the mints and assay offices during the fiscal year 1920 was \$224,431,664.04; United States coin received for recoinage was of value \$5,079,372.59; transfers of gold between Mint Service offices totaled \$8,841,214.55; making an aggregate of gold handled by the Mint Service during the fiscal year 1920 of \$238,352,251.18.

SILVER OPERATIONS.

Silver purchased during the fiscal year 1920 totaled 6,105,541.83 fine ounces, costing \$6,725,014.11, at an average price of \$1.10 + per fine ounce; the silver received for repayment to the depositors thereof in bars bearing the Government stamp totaled 5,654,110.33 fine ounces; the United States silver coin received for recoinage totaled 541,315.12 fine ounces, with recoinage value of \$748,318.81; silver deposited in trust by other Governments totaled 1,469,813.52 fine ounces; the transfers of silver between Mint Service offices totaled 1,838,070.65 fine ounces, making an aggregate quantity of silver handled by the Mint Service during the fiscal year 1920 of 15,608,851.45 fine ounces. The above item of silver purchased includes 4,087,079.91 fine ounces purchased under the terms of the Pittman Act.

COINAGE.

The domestic coinage of the fiscal year 1920 was of value \$46,446,420, namely, \$16,990,000 in gold, \$19,763,600 subsidiary silver, \$4,566,750 nickel, and \$5,126,070 bronze coin. The coinage other than domestic included 325,000 gold libra blanks for Peru, 300,000 of which were made at the Denver Mint and 25,000 at the Philadelphia Mint; the Philadelphia Mint also manufactured 3,200,000 silver pieces for Venezuela, 6,135,000 silver pieces and 11,100,000 nickel pieces for Cuba, 6,492,000 nickel pieces for Salvador, 16,463,-

334 nickel blanks for Argentina, 150,000 nickel pieces and 700,000 bronze pieces for Nicaragua, and 6,825,000 bronze pieces for Siam, or a total of 51,090,334 foreign pieces made at the Philadelphia Mint. At the San Francisco Mint 14,000,000 silver pieces and 8,235,000 bronze pieces were made for Indo-China, and 2,500,000 bronze pieces for the Philippine Islands.

The seigniorage on United States coinage executed totaled \$12,-115,242.70, of which \$3,896,534.75 was on subsidiary silver coins and \$8,218,707.95 was on nickel and bronze coins. The seigniorage was about 45 per cent greater than that of the previous year, \$8,371,202.33.

STOCK OF COIN AND BULLION IN THE UNITED STATES.

On June 30, 1920, the estimated stock of domestic coin in the United States was \$1,425,767,521, of which \$898,054,788 was gold, \$268,857,494 was silver-dollar coin, and \$258,855,239 was subsidiary silver coin.

The stock of gold bullion in the mints and assay offices on the same date was valued at \$1,794,311,486.20, a decrease over last year of \$8,539,487.52; and the stock of silver bullion was 19,663,305.93 fine ounces, an increase over last year of 2,176,926.23 fine ounces.

PRODUCTION OF GOLD AND SILVER.

The production of gold and silver in the United States during the calendar year 1919 was as follows: Gold, \$60,333,400, a reduction from last year of over \$8,000,000; and silver, 56,682,445 fine ounces, a reduction from last year of over 11,000,000 fine ounces.

INDUSTRIAL ARTS.

The amount of gold consumed in the industrial arts during the calendar year 1919 was \$75,490,349, of which \$56,135,951 was new material. Silver consumed amounted to 32,700,521 fine ounces, of which 26,237,519 fine ounces were new material.

EXPORT OF GOLD COIN.

The net export of United States gold coin for the fiscal year ended June 30, 1920, was \$333,134,489.

ESTIMATES FOR THE FISCAL YEAR 1922.

Total appropriation estimates for the Mint Service for the fiscal year 1922, including the office of the Director of the Mint, amount to \$1,603,200. The appropriations for the year 1921 amount to \$1,754,180.

APPROPRIATIONS, EXPENSES, AND INCOME.

The appropriated amounts available for Mint Service uses during the fiscal year 1920 totaled \$2,022,433.04; reimbursements to appropriations for services rendered amounted to \$273,844.72, making an available total of \$2,296,277.76.

The expenses chargeable to appropriations were \$2,213,632.67; those chargeable to income, \$162,913.91; total, \$2,376,546.58.

The income realized by the Treasury from the Mint Service totaled \$12,900,604.24, of which \$12,115,242.70 was seigniorage.

ADDITIONS AND IMPROVEMENTS.

NEW ASSAY OFFICE BUILDING AT NEW YORK.

The new assay office building at New York, begun last year after many years' delay, has been completed. An illustration of the façade appears opposite. The building is four stories high and occupies the entire frontage at 30-32 Wall Street, with the exception of an alleyway on the west side, next to the subtreasury building, for access to loading platforms. This building will very materially relieve the unsatisfactory conditions so long prevailing at the institution, as it permits moving the administrative, clerical, and assaying divisions from the factory building, first occupied in 1911, into quarters designed and suitably equipped for their use, while much needed additional space for the melting and refining operations thereby becomes available in the older building. The new building is equipped with pneumatic tubes for carrying papers from department to department, has complete system of intercommunicating telephones, is well lighted throughout, and is designed generally to centralize the various departments.

The greatest relief afforded by the new building is in rendering available for use the splendid new bullion vaults. These large and modern vaults provide ample space and facility for safeguarding the large quantity of gold bullion, now exceeding a billion dollars in value, stored at this institution. In construction and arrangement they embody every safeguard and device that the best experts could evolve. They extend five stories beneath the street floor, a distance of some 70 feet beneath the surface and 40 feet below the water line. Access is gained by a special elevator, opening into each floor. These floors are designated as A, B, C, D, and E, from the top down; floors A, B, and C are divided into steel compartments, with shelves for distribution of bars, each compartment having a capacity of \$10,000,000 worth of gold bullion. The shelf capacity of each of these three floors is \$150,000,000. Floors D and E are undivided by compartments and will provide bulk storage for approximately \$500,000,000 each, in gold. Part of floor A will be used by the cashier as an auxiliary working vault, and floors A and B will be required for current business.

The basement floor contains, in addition to the vault approach, considerable storage room for materials; also recovery tanks for drainage from the assay and other departments.

The deposit receiving department is conveniently placed on the main or street floor, the public corridor of which faces Wall Street. This department has ample floor space, is well lighted and well arranged. Here all deposits of bullion are received, either from the public corridor or from the loading platform. A loading and receiving platform under a glass roof has been constructed in the space between the Pine Street and the new Wall Street buildings (with a movable platform for the alleyway) so arranged as to permit the most expeditious and efficient handling therefrom of all receipts not delivered by hand to the deposit weigh room, thus eliminating all unnecessary hauling of deposits. Convertible heavy wire-mesh partitions are provided for this loading platform, so that metal can be packed or unpacked fully protected and without interruption and yet under full observation of the proper officials.

UNITED STATES ASSAY OFFICE BUILDING, 30-32 WALL STREET, NEW YORK.
ERECTED 1919-1920.

United States Subtreasury Building at left.

The cashier's department, with a modern working vault, also faces the public corridor on the street floor. For the first time in many years these departments are adequately housed, in quarters appropriate in appearance, and with working space to correspond with the importance of the work performed. The beautiful and convenient corridor, also for the first time, affords the public access to the office through an entrance way commensurate with the dignity and importance of the office.

The second and third floors contain the offices of the superintendent, his secretary, the chief clerk, the superintendent of the melting and refining department, the accounting department, and the general office clerical force. They also contain a well-furnished office for the Director of the Mint and settlement officers.

The fourth floor is occupied entirely by the assay department, which is moved in its entirety from the old building. The equipment of this department has been brought up to date; the floor was designed specifically for the assay department, and the laboratories and weigh rooms have the very best of light, with ample space. The department, as a whole, in its physical equipment and working conditions, is very markedly improved.

Plans have been completed and will be immediately carried into execution for making the space vacated in the older Pine Street building, by the administrative, clerical, and assay departments, available for the very necessary rearrangement and improvement of the deposit melting room and the melting and refining departments.

The eighth floor of this building will be devoted entirely to the gold refinery. The present small and unsatisfactory laboratory is being removed to the fifth floor. The platinum refining cupboards are being removed, and the various refining and reducing processes for the platinum metals, heretofore carried on in the same room as the gold refinery, will be carried on elsewhere. This will permit the extension of the gold cells in such units as the future may make necessary, and also segregate the gold operations, necessary both from the standpoint of safety and of efficient operation.

The silver refinery will continue to be operated on the seventh floor, where little change will be necessary except for the removal of considerable stored material, lockers, etc., which have resulted in cramped space for the refining operations.

The sixth floor has been occupied by the machine shop, the carpenter shop, and the storeroom. It has also contained the rolls for the manufacture of gold cathode strips and the electric generators for the whole building. The result has been a very crowded and difficult working space for each of these activities. This floor is to be turned over entirely to the machine shop, including, in the space formerly occupied by the storeroom, adequate space for the manufacture of platinum ware (now grown to considerable volume), for various research departments of the Government. The change necessitates considerable alteration in the way of removal of partitions, resetting of machinery, etc.

The fifth floor was formerly entirely occupied by the assay department. The refinery laboratory, formerly on the eighth floor, will be installed in the former weigh room on the fifth floor, giving more commodious quarters, better light, and better conditions generally. It will be possible to establish and maintain here a complete refinery

laboratory, where the important research work carried on can be efficiently performed under proper working conditions. For many years the refinery laboratory force has been compelled to work under most discouraging physical conditions, and in quarters inconvenient in arrangement and absolutely unfitted for the careful and most important work carried on. This rearrangement alone will be of very great assistance and value to the melting and refining department. The remaining portion of this fifth floor (formerly occupied by the assay laboratories) will be devoted to the operations on metals of the platinum group. Heretofore, owing to crowded conditions, these important operations have been scattered throughout the building. This necessarily affected the efficiency of the operations, as well as increased the possibility of loss. The concentration of these operations (with the exception of manufacture of platinum ware) in this one space adjacent to the refinery laboratory, platinum-melting furnaces, and all other processes having to do with these valuable metals, will very greatly increase the efficiency of this work and eliminate much of the danger and possibility of loss that the old conditions created.

The removal of the superintendent's, chief clerk's, and book-keeping offices to the new building makes the fourth floor available for use as the make-up room for the melting and refining department. Formerly this division was compelled to use a part of the third floor, adjacent to the refinery melting room, where conditions as to heat and space were about as bad as could be. To fit this floor, it is necessary to remove existing office partitions, as well as the shower baths and lockers now used by the melting departments; also to remove from the second floor and install on this fourth floor the vault formerly used by the cashier. The rolls formerly in the machine shop on the sixth floor are also being installed here, thus concentrating the work of this division, so far as possible, on one floor. These changes will make a very great improvement over previous conditions.

The third floor will be used entirely by the melting room of the melting and refining department, which heretofore has been restricted to inadequate and most uncomfortable and badly arranged quarters, owing to use of part of the space by the make-up room. The furnaces, which are now built in a square around the central stack, making impossible the constant supervision of all the workers at them, will be rearranged along the sides of the room, leaving an open working space in the center. By this arrangement supervision of the work will be more easily had, the extremely bad conditions due to heat from the close proximity of one furnace to the other will be relieved and better working conditions generally secured. The vault formerly used by the make-up room will be available for use for metal in process, eliminating trucking and handling on two floors. To make these changes, it will be necessary to remove the partition wall between the two rooms into which this floor has heretofore been divided.

On the second floor the storeroom, carpenter shop, shower baths, and locker rooms for the men will be located. This floor formerly was occupied by the deposit weigh room, the cashier's, and calculators' offices. The former entrance to the building, facing Pine Street, was on this floor; this entrance will be closed and the vault

removed to the new make-up room on the fourth floor. There will also be constructed a drying room for the men's clothes. Heretofore lockers and shower baths have been scattered throughout the building wherever space would permit. This new arrangement will place the storeroom on the same floor on which goods are received, thus saving transportation to the sixth floor. The installation of a proper locker room and showers and drying room will add greatly to the comfort of the employees, and eliminate the necessity of their entering other departments than those in which they are employed. The closing of the Pine Street entrance will require that all employees enter and leave by the always guarded Wall Street door.

The sweep cellar is being improved by the installation of automatic conveyors for carrying the material from its storage place and automatically feeding it to the mill. This work was formerly performed by hand with shovels. The new process will eliminate much hard physical labor, will feed the mill more regularly, and reduce the time of operation.

Plans are under consideration for installation on the ninth floor of a more efficient system for condensation of values from furnace gases going through the stack. Heretofore the only method in use has been to intercept these discharges through a hole opening into a small room on the ninth floor, the recoveries being only such as automatically fastened themselves on the walls, ceilings, or floors of this room. The Cotrell system, with others, is now being investigated. It is certain that by the installation of a more scientific system much larger recoveries could be had than at present.

Proper ventilation for both the deposit and refinery melting rooms is a very pressing problem in connection with the changes now being made. Conditions in these two rooms are at times well-nigh intolerable. Every means to utilize the stack for this purpose have been tried, with the result of materially lessening its efficiency as a stack and not to a satisfactory extent relieving the situation so far as ventilation is concerned. The problem here is made more difficult by the close proximity of adjoining and surrounding buildings of greater height than the assay office. This problem is being studied with a view to its being solved in connection with the other changes now being made.

Nichrome muffles have been used in the assay department throughout the year and have given satisfaction, the average life being about eight months. Slight alterations being tried are expected to extend the life of the muffles.

A new stoneware flue for the boiling table has taken the place of that made from alberene stone, which had become much decomposed by the acid fumes.

PHILADELPHIA MINT IMPROVEMENTS.

My report for the last fiscal year referred to improvements under construction which would reduce labor costs, as well as facilitate the handling of metal, ingots, strips, and blanks. The ingot and strip conveying systems have been installed and in operation for some months. By this system ingots are conveyed from the melting room to the breakdown rolls 500 feet distant on the floor below. This same system is used to carry the broken-down ingots to the finish

rolls on the second floor, delivering them at a point within a few feet of the finish rolls. Since the installation of this system all hand trucking has been eliminated, the new system being economical as well as much more efficient. In this operation a labor saving of 40 per cent as compared with the old method of hand trucking has been effected.

The machinery of the rolling room has been rearranged. Under the old method the rolling mills were operated separately, requiring two men to each roll. Six mills have now been arranged in a row and connected by means of channels, through which the strips pass from one roll to another. When the strip has passed through the six rolls, it is finished and ready for the cutting presses, which are conveniently located to the last roll. This operation is handled by 3 men, against 12 in the old method of rolling. Considerable difficulty was experienced in adjusting the speed of the six rolls, as each one is driven by an individual motor. The speed of the succeeding roll, beginning with No. 2, must be slightly in excess of the one behind in order to accommodate the elongated strip. It was also necessary to perfect a flexible channel top which would, if necessary, permit of the strip bulging and at the same time prevent buckling. Bulging is principally caused by the speed of the roll ahead slightly decreasing or by a gain in speed of the roll behind, due mainly to fluctuating power. In order to avoid one strip overtaking another, we have devised a light signal which advises the operator when the strip is beyond the possibility of being overtaken. By arduous work and study of the conditions surrounding this method, all of the difficulties have been overcome, and we are now obtaining 15 per cent increase in finished strips at reduced labor costs of 75 per cent.

All other machinery in the rolling room has also been rearranged so that the metal is passed from one operation to another with the least possible handling. Shearing machinery is located convenient to the point where the strips are discharged from the rolls, and the disc-cutting presses are lined up a few feet further on. An attachment designed and built in this mint has been placed on each cutting press, which cuts the punched strips into lengths of 12 to 14 inches. Heretofore it was necessary to have a man behind each cutting press to receive and bend 8-foot punched strips into lengths suitable for the baling press. This machine automatically cuts them the desired lengths. By eliminating the old bending method one man now cares for the punched strips from all five cutting presses at a labor saving of 80 per cent.

A bucket conveying system has been installed and is operating between the rolling and cleaning rooms. This conveyer is in close proximity to the cutting presses and riddle. After being riddled the blanks are dumped into hoppers connected with the conveyer, from which they are picked up and conveyed to the annealing and cleaning room, where they are stored in elevated bins located above the annealing furnaces. These bins are connected with the furnaces by a system of tubes through which the blanks are fed to the furnaces, the feed being controlled by gate valves. After passing through the annealing furnaces the blanks are discharged into colanders which are picked up by an electric hoist and emptied into the tumbling barrels. After being cleaned they are delivered into the centrifugal driers. The old method of hand trucking has been entirely elimi-

nated in these processes at a saving of about 40 per cent in labor. When the drying process is complete the blanks are drawn from the driers into boxes which are placed on platforms. These platforms when loaded are raised with lifting trucks and taken to the milling machines. The use of these platforms obviates the necessity of unloading the blanks, as they remain on them until taken off to be milled. Hand trucking between the first and second floors in this operation has been eliminated, and the assembling of the milling machines in the east corridor in line close together, so that one operator is able to operate three machines instead of one, as was the case under the old method, has effected a labor saving of 66 per cent.

The time-consuming as well as expensive method of selecting blanks has been changed by making the selection at the cutting press by the operator who feeds the same, thus eliminating the employment of 12 operators previously engaged wholly on this work, at a saving of about \$12,000 per annum.

When milled the blanks are emptied into large platform bins. They are then passed over platform scales by use of the lifting truck, and the net weight of the blanks determined by deducting the known weight of the tare. After being weighed the bin of blanks is trucked to the coining room, where it is placed at a convenient point for coining operations, the blanks being drawn out as required through a sliding door at the bottom of the bin.

There has been installed in the coining room by our machinists an overhead carrying system, the tracks of which are run conveniently to the presses, reviewing tables, scales, and counting machines. Over the tracks of this system trucks are operated which carry large hoppers. Blanks are placed in these hoppers, which are easily conveyed from one press to another. They are fed directly to the hopper feed of the press through a slide door and tube attached to the hopper. The same system is used for gathering the finished coins and delivering to the reviewing tables, scales, and counting machines, thus obviating the necessity of handling the product in a number of small boxes as previously required.

All hand trucking and scooping blanks and coin have also been eliminated under these new processes, at a saving of 50 per cent in labor.

We have in operation six new design electrically driven automatic counting machines with capacity of 2,000 pieces of coin per minute. Each machine is attended by one operator instead of two, as previously required in the hand counting-board method. Under this new method of counting coins a saving of 50 per cent in labor is effected over the old counting-board method, as well as an increased output of counted coin of 15 per cent.

It has been the custom for many years past to weigh all minor coinage metals, clippings, and blanks on large troy balances in drafts of 10,000 ounces each (about 600 pounds). This system has been eliminated, and we are now using platform scales delicately adjusted, on which we weigh drafts in excess of 2 tons at one time. Blanks and clippings are placed in specially constructed and weighed containers. By this means it is an easy matter to ascertain the weight of a large quantity of metal without handling it over a 10,000-ounce balance twice, as was necessary under the old method.

The seven automatic weighing machines for weighing individual blanks and coins have been transferred from the second floor to the west corridor of the first floor outside the rolling room, so arranged that one man feeds two machines instead of one. The corridor has been inclosed and a wooden floor placed over the cement to reduce the vibration to a minimum. After blanks are milled they are delivered to these scales only a few feet distant from the milling machines, which obviates the necessity of trucking them to the second floor, as they were handled heretofore, at a saving of 30 per cent labor costs.

The new 16-inch roll has been erected in the break-down rolling room and has increased the capacity of this room by 50 per cent. The two similar rolls have, up to this time, been inadequate to supply sufficient broken-down strips to keep the new chain of finishing rolls in operation. That difficulty has now been eliminated.

While the full effect of all the improvements noted in this report is not shown in the production of coin for the past fiscal year, because of the fact that many of them were not installed until late in the year, it is evident that while they were in operation their efficiency is reflected, as the domestic coinage for the year totaled 514,459,250 pieces of coin, the largest number of pieces coined in any one year in the history of the mint. The minor coinage production was the largest in the history of the mint, exceeding last year's production by 152,628,000 pieces of coin. In addition to the domestic coinage, 51,090,334 pieces of coin and blanks were executed for foreign Governments. To produce this vast coinage, the mint operated on the basis of 24 hours the greater part of the year, and even then it was unable to keep up with the demands made upon it. It is therefore necessary that every improvement which will make for increased production be made.

Improved procedure for handling copper from time of receipt until it reaches the melting furnaces has eliminated hand trucking across an open courtyard in all kinds of inclement weather, as well as other inefficient methods. As the copper comes in, it is weighed upon the yard platform scales, which are under cover; the driver then turns his truck and stops under a special elevator, which is lowered to within easy reach of men on truck to do the unloading. The bars of copper are placed on the gravity conveyer, which carries them into storage room below make-up room. From storage room there is another special elevator which will deliver the bars in make-up room, at side of scales. Here there has been installed a platform scale, and upon a truck platform bar melts are prepared for electric furnaces. Over this scale and also serving the 6-foot balance in this room is another section of overhead track. The purpose of this track is to serve the furnaces with bar metal as made up on the platform scale, and also to provide a storage supply of made-up melts under track, ready to be lifted by 1-ton chain hoists to trolley for conveyance to position near furnace for charging at a moment's notice. These improved methods and appliances have the effect of releasing men from this department for activities in other departments, thereby increasing the output of finished coin.

The installation of Northrup induction electric furnaces in the deposit melting room was ready for partial operation in March. The

complete installation consists of two 8-kilowatt and two 16-kilowatt furnaces, operating on two-phase circuit.

The smaller units have melting chambers 7 inches inside diameter by 12 inches high; the larger ones accommodate crucible capacity of about 4,000 ounces of fine silver. The 8-kilowatt units have been operating daily since March 20 on small deposits, two small crucibles being used to each furnace, which practice has been followed on the combustion furnaces for years past. The furnaces are now supplied with General Electric condensers, which hold up well to their rated capacity; since starting the furnaces there have been no delays due to condensers breaking down. Unless the character of deposits makes it necessary to flux heavily in the crucibles, the life of crucibles used in these furnaces may safely be said to be twice that of those used in gas-fired furnaces. The melting capacity per 8-kilowatt furnace on small deposits will average 100 ounces per hour, with a maximum of 1,000 ounces per eight-hour day. This would mean a total capacity of 2,000 ounces of small and what we call "good" melts per day—that is, melts not requiring fluxing or fire refining—an amount well above the present day's average. On the 16-kilowatt units we made test runs only because these furnaces were not supplied with proper condensers and equipment adapted to our special needs. The results of a test run, melting fine silver bars, were as follows: Total amount melted, 13,478.50 ounces; total time consumed, seven hours; total current used, 156.50 kilowatt-hours; pounds melted per kilowatt-hour, 5.905; average load per phase, $12\frac{1}{2}$ kilowatts. The results will be greatly improved when the capacity of furnaces is reached by having full quota of condensers (which are now being installed) using 16 kilowatts per phase instead of $12\frac{1}{2}$. The fuel cost at the rate of consumption shown above compares favorably with gas.

The Northrup induction furnace being an entirely new development, it may be well to give a general explanation as to just how the electric current is used. Connections from 3-phase, 13,000-volt city lines are made to a bank of two 40-kilo-volt-ampere static transformers, changing the service to 2-phase, 212 volts. This 2-phase current is carried by heavy cables 150 feet to the deposit melting room. Here connections are made to transformers which raise the voltage to about 6,000, at which pressure the furnaces are operated. By leading this 60-cycle current at 6,000 volts through a bank of condensers and a mercury spark gap, specially devised, the frequency of the current is raised to about 12,000 cycles. This high-frequency current is led through a copper pipe coil surrounding melting zone of furnace. Water is circulated through this coil for cooling purposes, as electricity is for heating purposes. The heating effect, however, instead of being within the metal with which the coil is composed, is induced within a conductor inside the circle of the coil. In the case of this furnace, the conductor adopted is pure graphite. A crucible of Acheson graphite is placed inside the copper helix; when the current is turned on, the crucible becomes incandescent and all materials within it are subjected to fusing temperatures. The effect of this high-frequency current is to produce extremely high temperatures, which in the case of these furnaces reaches well above $1,200^{\circ}\text{C}$. The furnaces under operation show

no fire or heat until the two lids are raised, hence are immeasurably more comfortable to work around than any combustion fire could be.

Experts are, at date of writing, placing the last part of apparatus pertaining to the larger units, and regular, continuous service is expected soon. It is believed that there has been installed here the most modern and wonderful induction electric furnace known to science and, being a crucible furnace, its adaptation to mint work on precious metals is advantageous.

In September, 1919, we started operating the new 1-ton Rennerfelt electric furnace. The design of this furnace called for concrete columns to support the axis of tilt, which axis, being on a line with spout, permits direct pouring from furnace. The columns had formed part of the half-ton furnace design as originally installed here, but experience on this furnace showed how very much in the way these columns were. Consequently, when the new 1-ton furnace was erected, instead of these concrete supports, cast-steel overhanging frames were used, making a better mechanical design and a wonderful improvement.

Considering the manufacture of bronze ingots, this 1-ton electric furnace is the equivalent of seven gas furnaces which required for operation and care of product seven melters and four helpers. On the new 1-ton furnace, as used, we require three melters and six helpers for melting, preparing, and delivering metal to coining department. In the delivery of ingots, due to the gravity and power conveyers, all labor of trucking from melting room to scales has been eliminated. The saving by the installation and careful operation of these indirect arc furnaces, considering refractory cost, labor, and material, amounts to over 35 per cent.

The past year has brought about marked changes in the melting department as regards the handling of the metal from furnace mouth to storage in coining department. The improvements that have been installed have coordinated this part of the work with the increased melting capacity of the electric furnaces, and the system for manufacturing and handling ingots is now at once flexible, quick, labor-saving, and in line with good up-to-date practice.

The method now used for making ingots of 30 pounds is as follows: The molten metal is received from furnace in a special lined, under-surface-pouring, welded-steel ladle, in shank. The shank rests in a bale carried on a chain hoist which is hung from an eight-wheel carrier on a track above. The track forms part of the overhead carrying system, which enables ladles to be taken quickly from mouth of furnace and conveyed to pouring position by the side of each set of molds on turntables. The track installation is arranged with switches in order that ladles may be diverted from one turntable to another, or back to furnace without interfering with melters pouring into molds. Ladle shanks are now used with one butt end, in order that a single operator can negotiate his pot of molten metal from furnace to molds, and control hoist unattended by an additional man as previously. The ingots are taken from the molds and placed on a gravity roller conveyer, which taps convenient points of the pouring zone, and they are conducted to a cooling tank, through which they are carried by a power slat conveyer; after emerging from the water they are delivered by the conveyer to a point within reach of two machines, one for cutting off heavy shrink head, the other for trim-

ming fins off edges and bottom or point of ingot, one man caring for both of these machine operations, instead of a man for each machine. After this shearing the ingots are placed on a bench at the side of filers who remove by filing the loose rough edges, and place the ingots on a gravity conveyer within reach, starting them on their way to coining department, at the other end of the building. The ingots are carried the length of the building on an endless belt, until it reaches the final chute or gravity delivery to rolling room below. Here ingots are received and piled upon trucks, these trucks being held for transfer from the melting to the coining department over platform scales weighing in pounds rather than ounces, after which weighing the ingots are piled near by for stock. Since the installation of the conveying system and platform scales (weighing up to 2 tons) the work of delivering minor coinage ingots to the coining department and receiving clippings therefrom has been cut in half, with a corresponding saving of labor charge.

The changes in old and installation of new machinery during the past fiscal year have pushed the machine shop of this mint to the utmost. Many of the improvements were designed and built in the shop, and, as before stated in this report, the overhead-carrying systems in both the melting and coining rooms were completely installed by the machinists employed here. In order to increase facilities for taking care of heavy work such as coining presses, large gear wheels, roll housings, turntables, and molds, there has been installed a new 48-inch planer and a new 60-inch lathe. There has also been installed a new cutting-off saw, which cuts six bars of die steel at one cut, as compared with one bar on the old machines. The machine thus facilitates the cutting of steel for dies, the demand for which has increased tremendously for both medals and coin.

SAN FRANCISCO MINT IMPROVEMENTS.

During the latter part of the fiscal year this mint was visited by the Director of the Mint, who immediately took up the matter of interior structural changes to the building necessary for the installation of an electric furnace and a general conveyer system in the operative departments. Embodied in his plans was the idea of providing more floor space in the working rooms wherever possible so as to allow for additional equipment and expansion in the future. The work proceeded rapidly under his daily supervision and the results as set forth below have in every way confirmed his visualization of the needs of the institution.

The removal of the south wall gave to the press or coining room the space formerly occupied by a lavatory, while the removal of the west wall added what was originally part of the main corridor. These changes gave to the pressroom additional floor space amounting to 700 square feet. The cutting of an arch 14 feet wide and 13 feet high in the wall between the pressroom and the coining-department make-up room now practically throws these two rooms into one.

The removal of the vault in the northeast corner of the rolling room and the cutting of an arch 13 feet wide and 13 feet high between the rolling and the cutting rooms gave a clean sweep along the length of these two rooms after two cast-iron columns in the cutting room had been moved to the south for a distance of $5\frac{1}{2}$ feet. To provide

vault space a small vault was built in the southeast corner of the rolling room.

In the old strip-annealing room the removal of four cast-iron columns made it available for use as the whitening or brightening room, and this change left the old whitening room for use as a minor coinage ingot and clipping weigh room after the door to the adjoining melting room had been enlarged to $8\frac{1}{2}$ feet.

In the melting room just referred to it was necessary to also remove four cast-iron columns so that space could be found for the electric furnace.

The telephone room at the south end of the main corridor was moved to the hall immediately overhead, and a partition run across the corridor; then the cutting of an arch 14 feet wide by 13 feet high from the corridor to the melting and refining department weigh room gave additional floor space to this room of 276 square feet. The desks for the clerks were moved into adjoining offices and the room cleared for actual mechanical operations. In order to house the melting and refining department clerks, the counter in the cashier's office was shortened and swung across to the wall about the middle of the office, thus providing the necessary additional desk room for the abstract clerk in that portion of the cashier's office which formerly was used by the warrant and computing clerks.

In the basement a space was bricked off for sweeps ready for sale, and this allowed room in the sweep cellar (where the sweeps had formerly been stored) for the building of an incinerator and the installation of a chili mill, both of which had been in another room. This last-mentioned room, being cleared, is now used as a minor coinage metal store and make-up room. The door is within 5 feet of an elevator which stops at the electric melting room on the floor above.

The electric furnace installation and the conveyer system to be installed are well under way, and a detailed account will be rendered with the next annual report.

During the fiscal year two General Electric centrifugal air compressors and a loop system of piping were installed for use in connection with the oil and gas melting furnaces. Each air compressor is direct connected to a high-speed 220-volt direct-current electric motor and has a full-load rating of 1,900 cubic feet of free air per minute, compressed to 2.5 pounds. The motors are provided with a speed-regulating rheostat to vary the speed from 2,800 to 3,850 revolutions per minute, giving an air pressure regulation from 1.5 to 2.5 pounds per square inch, with a proportionate increase or decrease of air volume delivered. The system as installed gives practically constant pressure at each furnace under all conditions of load and has eliminated the use of four belt-driven blowers with their attendant troubles and low efficiency.

Two motor-driven bottle shakers were purchased from the Philadelphia Mint for humid work in the assay department.

DENVER MINT IMPROVEMENTS.

During the fiscal year 1920 several improvements were made in the sweeps cellar. The Elspass mill was removed and a ball mill installed, with a settling tank and copper plate. Under this system the sweeps will first be run through the crusher and from there

through the ball mill into the settling tank and over a copper plate on to the Wilfley table. A new rotary dryer has also been purchased and will be installed in place of the old flat plate used for the last 10 years. These changes will make a very efficient up-to-date sweeps cellar.

Two tumbling barrels and a new centrifugal dryer have been purchased and will be installed at once in the annealing room, adding to the efficiency and capacity of that room.

INCOME AND EXPENSES OF THE FISCAL YEAR 1920.

INCOME.

Earnings:

Credited to appropriations—

Charges on foreign coinage executed.....	\$247, 841. 54
Charges for manufacture of special medals.....	17, 946. 77
Charges for work done for other institutions, etc.....	8, 052. 49

Total earnings credited to

appropriations..... \$273, 840. 80

Credited to revenues—

Mint charges on bullion.....	383, 876. 25
Proceeds of medals and proof coins sold.....	6, 465. 33
Receipts from special assays of bullion and ores.....	3, 772. 00

Total earnings credited to

revenues..... 394, 113. 58

Total earnings..... \$667, 954. 38

Profits:

Gain on bullion ship-

ment to refineries.....	\$1, 874. 89
Less contra losses.....	698. 89

1, 176. 00

Surplus bullion recovered..... 50, 786. 44

Proceeds of sale by-products (platinum, etc.)..... 63, 968. 51

Proceeds of sale of old materials... 1, 473. 78

Commission on telephone calls.... 2. 43

Total profits other than seigniorage..... 117, 407. 16

Seigniorage on subsidiary silver coinage..... 3, 896, 534. 75

Seigniorage on minor coinage—

Nickel..... 4, 154, 069. 63

Bronze..... 4, 064, 638. 32

Total seigniorage..... 12, 115, 242. 70

Total profits..... 12, 232, 649. 86

Total income..... 12, 900, 604. 24

EXPENSES.

Chargeable to appropriations:

Compensation of employees—

Mint Bureau, salaries appropriation.....	\$23, 208. 37
Mint Bureau, increase compensation appropriation.....	2, 548. 66
Mints and assay offices, salaries appropriations.....	237, 837. 57
Mints and assay offices, wages appropriations.....	1, 130, 654. 99
Mints and assay offices, increase compensation appropriation.....	218, 450. 71

Total compensation of employees..... \$1, 612, 700. 30

Equipment, stores, and other expenses—

Mint Bureau, contingent appropriation.....	5, 199. 27
Mints and assay offices, contingent and permanent appropriations (including \$14,164.99 wastage of gold and silver in operative departments and \$5,711.27 loss on assay value of operative sweeps sold).....	585, 135. 49
Transportation of bullion and coin between mints and assay offices, freight appropriation.....	10, 597. 61

Total miscellaneous expenses chargeable to appropriations..... 600, 932. 37

Total expenses chargeable to appropriations..... 2, 213, 632. 67

Chargeable to revenue:

Seigniorage on minor coinage—

Expenses of distributing minor coin to Treasury offices.....	158, 018. 57
Wastage of minor metals in operative departments.....	4, 895. 34

Total chargeable to revenue..... 162, 913. 91

Total expenses..... 2, 376, 546. 58

Net income of the Government from the mint service..... 10, 524, 057. 66

Total..... 12, 900, 604. 24

DEPOSITS, INCOME, EXPENSES, AND EMPLOYEES, BY INSTITUTIONS, FISCAL YEAR 1920.

The number and value of deposits, the income (including seigniorage), the expenses of the fiscal year 1920, and the number of employees on June 30, 1920, at each institution follows:

Institution.	Deposits.	Redeposits.	United States coining value of gold and silver received at each institution.	Income.	Expenses from appropriations. ¹	Transportation of bullion and coin.	Employees June 30, 1920.

Total.....	8,973,620.84	132,973.58	48,869,012.87	760,952.43

PURCHASE OF MINOR COINAGE BLANKS PREPARED FOR COINAGE.

There were purchased during the fiscal year 1920, for delivery to the mint at Philadelphia, the following nickel and bronze blanks prepared for stamping:

Items.	Troy ounces.	Cost.
Nickel 5-cent blanks.....	7,513,333.32	\$324,216.00
Bronze 1-cent blanks.....	14,547,997.92	459,444.12
Total.....	22,061,331.24	783,660.12

SALE OF MINOR COINAGE METALS.

There were sold during the fiscal year 1920 the following minor coinage metals:

Items.	Sold by Philadelphia mint.		Sold by San Francisco mint.	
	Troy ounces.	Cost.	Troy ounces.	Cost.
Nickel metal.....	3,015,422.67	\$54,372.48		
Bronze metal.....	71,019.08	1,151.18	419,281.75	\$6,040.98
Total.....	3,086,441.75	55,523.66	419,281.75	6,040.98

DISTRIBUTION OF MINOR COINS.

The value of minor coins distributed from the mints during the fiscal year 1920 was \$9,652,751.55, and the expenses for distribution were \$158,018.57, as follows:

Items.	Philadelphia.	San Francisco.	Denver.	Total.
Distribution:				
5-cent nickels.....	\$3,527,549.00	\$463,300.00	\$520,454.05	\$4,511,303.05
1-cent bronze.....	3,575,462.00	1,006,992.51	558,993.99	5,141,448.50
Total.....	7,103,011.00	1,470,292.51	1,079,448.04	9,652,751.55

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1920.

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1920, was 12.2 million fine ounces of gold and 68.4 million fine ounces of silver. There were also operated upon at the coinage mints 169.3 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; Coiner—gold, 0.0005; silver, 0.001.

Total reimbursements.....	8,868.69	2,280.39	3,513.42	10,109.10	24,771.60

ENGRAVING DEPARTMENT.

The engraving department at the Philadelphia mint has again been called upon for a record quantity of work.

Nearly 10,000 dies were made during the fiscal year ended June 30, 1920, averaging more than 30 dies for every working day.

To meet the great demand for domestic coins, 6,960 dies were supplied to the mints in Philadelphia, San Francisco, and Denver.

The number of dies used for foreign coinage was 1,304, Cuba, Indo-China, Salvador, and Venezuela taking the larger part of this number.

The number of medal dies made the past year has been very unusual. The War Department ordered 5,000,000 Victory medals to be made by contractors in various parts of the country, and the Fine Arts Commission prepared a design for the medal, at the same time insisting that all the dies be made at the mint in Philadelphia. This recognition of the engraving department of the Mint Service is a source of satisfaction, although the increased amount of work was very great. The making of the dies presented many difficulties which were not easily overcome and the number of dies required by the medal makers exceeded all expectations.

The demand for miniature medals for the War and Navy Departments necessitated making reductions of many of the award medal dies.

The preparation of dies for insignia and collar ornaments has again this year been an important item.

At the Philadelphia mint 357,000,000 cents were coined during the year; the average per pair of dies is more than 450,000 pieces. This result stands alone in our records, and such an average can only be obtained by the most painstaking care in the selection of the steel and in every succeeding operation until the dies are set in the coining presses.

THE PROGRESS OF THE NUMISMATIC COLLECTION.

Additions to the numismatic collection for the fiscal year consisted of coins, ancient and modern, medals, and decorations. In the acquisition of coins the practice has been followed of utilizing a small portion of the purchase fund for buying specimens of ancient issues. The examples of Greek coins thus acquired belong to the best period of Greek art, while the Roman bronze and silver pieces were issued, for the most part, in the first century A. D., which is the period of chief numismatic as well as historical interest.

Besides many other interesting medals there have been acquired numerous additional World War medals, so that the several hundred examples now in the cabinet furnish almost a complete medallic record of that historic struggle. The group also includes a large number of propaganda medals, both serious and satirical, and thus furnishes imperishable and unalterable material for a history of the sentiments developed and the aspirations that accompanied the operations of the war on land and sea.

The decorations acquired belong to a number of European orders whose long and notable history is now likely to come to an end. While interesting in themselves as specimens of beautiful design and for that reason of special value for such a collection as this, they are even more important as relics of those great orders.

EMPLOYEES.

The total number of persons employed in the institutions of the Mint Service on June 30, 1920, was 875.

The number of employees in each of the various departments of the principal institutions is given below:

NUMBER OF EMPLOYEES, BY DEPARTMENTS.

Institution.	General.	Engraving.	Assaying.	Coining.	Melting and refining.	Total.

ORE ASSAYS.

A comparative statement of ore assays made at the minor assay offices since 1915, shows increased use of our facilities by the mining industry as the result of reducing our charge for this service to a nominal sum. The reduction in number of ore assays in the past three years is probably due to the adverse effect on prospecting and on small producers, of increased costs without corresponding increase in returns on gold bullion, the price of which remains constant at \$20.67 + per fine ounce.

Fiscal year.	Ore assays made.	Amount of charges collected.
.....	1,404	\$885.65

LABORATORY OF THE BUREAU OF THE MINT.

From the domestic coinage of the calendar year 1919 the assayer of this bureau tested 618 silver coins, all of which were found within the legal requirements as to weight and fineness.

The greatest deviation in fineness of silver coins above standard (the limit being 3 above or below) was 2.4, while the greatest deviation below was 2.8.

The following table summarizes the silver coins:

Fineness.	Number of silver coins.				Fineness.	Number of silver coins.			
	Phila- del- phia.	San Fran- cisco.	Den- ver.	Total.		Phila- del- phia.	San Fran- cisco.	Den- ver.	Total.
897.2.....	1			1	900.7.....	23	5	6	34

					Total.....	326	152	140	618
					Average.....	899.981	899.911	899.819	899.930

Philippine coins to the number of 25 were examined, all being within the legal requirements. The work of testing certificate bar assaying throughout the service was continued, and a conference of service assayers was held at the Philadelphia Mint beginning October 21, 1919, at which a unified method for making such assays was adopted.

PROCEEDINGS OF THE ASSAY COMMISSION, 1920.

The following-named ladies and gentlemen were designated by the President as commissioners to examine and test the weight and fineness of the coins reserved at the several mints during the calendar year 1919, pursuant to the provisions of section 3547 of the Revised Statutes of the United States: Representative William A. Ashbrook; Hon. J. Edward Barry, Cambridge, Mass.; Mr. John Stewart Bryan, Richmond, Va.; Col. Richard Burgess, El Paso, Tex.; Senator Arthur

Capper, Kansas; Hon. George H. Dern, Salt Lake City, Utah; Mrs. Kellogg Fairbank, Chicago, Ill.; Mr. Louis Fischer, Bureau of Standards; Hon. T. V. Gregory, Emlenton, Pa.; Dr. J. M. Henderson, Columbus, Ohio; Dr. A. R. Johnston, Reevesville, S. C.; Mr. Sedgwick Kistler, Lock Haven, Pa.; Mrs. B. B. Munford, Richmond, Va.; Mr. Joseph H. O'Neil, Boston, Mass.; Representative John M. Rose, Pennsylvania; Mr. Harry Scheeline, Reno, Nev.; Mr. Till Taylor, Pendleton, Oreg.; Mr. Samuel W. Traylor, Allentown, Pa.; Mr. R. A. Underwood, Plainview, Tex.; Mr. Garland E. Vaughan, Lynchburg, Va.; Representative Albert H. Vestal, Indiana; Mr. N. B. Wescott, Olney, Va.; Hon. Charles E. Wright, Montpelier, Idaho. The Comptroller of the Currency, the judge of the District Court for the Eastern District of Pennsylvania, and the assayer, United States assay office, New York, were ex officio members.

The commission met at the mint at Philadelphia, Wednesday, the 11th day of February, 1920, and Hon. William A. Ashbrook was elected chairman.

The chairman, with the approval of the commission, appointed the following committees:

Committee on counting: Hon. Arthur Capper, chairman, and Mrs. Munford, Messrs. Vestal, Johnston, O'Neil, Barry, Dern.

Committee on weighing: Maj. Louis Fischer, chairman, and Mrs. Fairbank, Messrs. Vaughan, Scheeline, Henderson.

Committee on assaying: Mr. George R. Comings, chairman, and Messrs. Williams, Traylor, Rose, Underwood.

Committee on resolutions: Representative John M. Rose, chairman, and Mrs. Fairbank, Mrs. Munford, Mr. O'Neil.

Mrs. Virginia H. Carpenter was designated as secretary of the commission.

COMMITTEE ON COUNTING.

The committee on counting reported that the packages containing the pieces reserved by the several mints for the trial of coins in accordance with section 3539 of the Revised Statutes were delivered to them by the superintendent of the mint at Philadelphia, and upon comparison with the transcript kept by the Director of the Mint and the count of coins from packages selected at random from deliveries of each month at each mint, were found to be correct.

The verification of the packages being completed, they were delivered to the committees on weighing and on assaying.

The table following gives the number of pieces and value of coins counted by the committee on counting:

Denomination.	Philadelphia.		San Francisco.		Denver.		Total.	
	Pieces.	Value.	Pieces.	Value.	Pieces.	Value.	Pieces.	Value.
Silver:								
Half dollar.....	300	\$150.00	476	\$238.00	408	\$204.00	1,184	\$592.00
Quarter dollar.....	2,812	703.00	386	96.50	562	140.50	3,760	940.00
Dime.....	9,745	974.50	2,495	249.50	2,671	267.10	14,911	1,491.10
Total.....	12,857	1,827.50	3,357	584.00	3,641	611.60	19,855	3,023.10
Philippine coins:								
50 centavos.....			481	P240.50			481	P240.50
20 centavos.....			426	85.20			426	85.20
10 centavos.....			815	81.50			815	81.50
Total.....			1,722	407.20			1,722	407.20

COMMITTEE ON WEIGHING.

The committee on weighing reported that they had weighed the coins shown in the list below and had found the same to be within the tolerance established by law. The coins were selected at random from those reserved for the annual assay by the mints at Philadelphia, San Francisco, and Denver.

The coins were directly weighed against a set of sealed coin weights which were accompanied by a certificate signed by the Director of the Bureau of Standards, Department of Commerce, and which gave the value of the weights in terms of the United States standard. The weighings were made on a Troemner balance supplied by the Philadelphia Mint, which was tested by the committee as to the equality of the arms, and as to its sensibility, which was entirely satisfactory.

The Philippine coins were compared with a set of weights which were first tested against the coin weights referred to above.

As a further check upon the work of the Philadelphia Mint, the set of troy weights used as standard by this mint, from 500 ounces to 0.0001 of an ounce, were carefully intercompared with one another and found to be in agreement within negligible quantities.

RESERVED COINS WEIGHED.

Denomination.	Philadelphia.		San Francisco.		Denver.		Total.	
	Pieces.	Value.	Pieces.	Value.	Pieces.	Value.	Pieces.	Value.
Silver:								
Half dollar.....	10	\$5.00	24	\$12.00	18	\$9.00	52	\$26.00
Quarter dollar.....	18	4.50	14	3.50	25	6.25	57	14.25

10 centavos.....			8	.80			8	.80
Total.....			30	10.60			30	10.60

COMMITTEE ON ASSAYING.

The committee on assaying reported that from the coins reserved from the United States mints at Philadelphia, San Francisco, and Denver samples for assay had been taken representing all denominations coined at each mint during each month of the year.

The results of assays made of the individual coins and of samples from larger numbers massed and melted are given in the schedules. From these it is seen that—

The highest assays upon the silver coinage of the different mints (the limit of tolerance being three one-thousandths) are at Philadelphia, 900; San Francisco, 900.7; Denver, 900.

Disregarding the assays upon the three low Denver coins mentioned hereafter, the lowest assays upon the silver coinage of the different mints (the limit of tolerance being three one-thousandths) are at Philadelphia, 898.4; San Francisco, 898.9; Denver, 898.4.

The highest and lowest assays upon the Philippine silver coinage at San Francisco are 750.2 and 749.2.

The committee has tested the acid used in the humid assay of silver and found it to contain only a trace of chlorine.

The balances used were also tested and found to be correct, and the committee deems the assays exhibited in the following schedules to be entirely correct:

In three deliveries, No. 3, January 14; No. 6, January 21; and No. 23, March 5, from the Denver Mint, all quarter dollars, the coins first selected by the committee, assayed below the legal tolerance. The assays were twice repeated with similar results, the assays showing 896, 896.3, 896.3.

The committee then obtained three additional coins from each of these delivery envelopes and each coin was assayed in triplicate, the results being as follows: No. 3, 899.2; 898.6; 898.6. No. 6, 899.8; 898.4; 898.5. No. 23, 899.6; 899.5; 898.5.

The committee therefore considers that the deliveries may fairly be passed as within the legal tolerance, the low fineness of the three coins originally assayed possibly being attributable to segregation in the ingot.

ASSAYS OF SILVER COINS MELTED IN MASS.

COMMITTEE ON RESOLUTIONS.

The following report submitted by the committee on resolutions was unanimously adopted:

Whereas the United States Assay Commission of 1920, appointed by the President of the United States, met at the United States mint, in the city of Philadelphia and the State of Pennsylvania, on the 11th, 12th, and 13th days of February, 1920, for the purposes set forth in said appointment, and in accordance with the provisions of the statutes of the United States in such case made and provided; and

Whereas the members of said commission have discharged all of the duties imposed upon them under such appointment; and

Whereas during the continuance of the meeting of the commission the members were escorted throughout the mint, and given full and free permission to inspect the equipment and observe the conduct of the vast number of employees who have so largely contributed to the successful operation of the mint; therefore, upon the completion of the duties assigned the commission, the committee on resolutions met and adopted the following for your consideration:

Resolved, That the thanks of the commission are hereby tendered to Hon. Raymond T. Baker, Director of the Mint, whose lively interest in the welfare of all employees is worthy of special mention and commendation; to Hon. A. M. Joyce, superintendent, and to Mrs. Virginia H. Carpenter, secretary, for the uniform kindness and courtesy extended at all times to the members of the commission.

Resolved, That the Director of the Mint and all officials and employees under his supervision are worthy of commendation for the excellent condition in which we found the building, the equipment, and the sanitary conditions surrounding all of the men and women who are employed in and about the building.

Resolved, That the spirit of content manifest among the employees, their willingness to perform their full duties is but an indorsement of the management of the mint and an outstanding evidence of the value of cooperation.

Resolved, That as statistics show the output of the Philadelphia mint exceeds that of all other mints combined, more space for the delicate and intricate machinery employed should be provided; this should be done in the interest of efficiency and safety to employees.

Your committee beg to suggest that the peculiar kind of service rendered by the employees of the mint commands a greater return for the skill demanded, and we recommend that the schedule of wages and salary, which in some instances has remained the same for a period of more than 37 years, be submitted to the proper authorities with a view of providing a basis of pay commensurate with the service rendered.

Resolved, That we extend our thanks to the splendid body of men and women who are employed in the mint for their kindness in assisting the members of the commission in acquiring some knowledge of the modern methods employed in the coinage of silver and gold.

In expressing his pleasure in serving on the commission, Chairman Ashbrook announced that he had served six times as a member of the Assay Commission and that he had never enjoyed a meeting more, which might be due to the fact that there were two ladies on the commission, in response to which Mrs. Fairbanks and Mrs. Munford each expressed their pleasure at being selected as members of the commission, the work of which they had found interesting and instructive, in addition to which it was a gratification to know that women were to share in men's work as well as in their pleasure, and hoped the innovation would be carried out in future commissions.

ASSAY COMMISSION MEDAL.

The Assay Commission medal, made in the engraving department of the mint at Philadelphia, was designed by the engraver, Mr. George T. Morgan. The obverse bears the portrait of the President of the United States. The design for the reverse is a seated figure, showing dignity with conscious power and repose. In her right hand she has a sword and in her left an olive branch. The legend is Victory and Peace.

Each member was presented with one of these medals, which bear the usual inscription denoting that the medal is made to commemorate the meeting of the Annual Assay Commission, the name of the recipient being engraved on the periphery.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1920, is respectfully submitted.

RAYMOND T. BAKER,
Director of the Mint.

HON. DAVID F. HOUSTON,
Secretary of the Treasury.

PART II

REPORT OF THE DIRECTOR OF THE MINT ON
THE PRODUCTION AND CONSUMPTION OF GOLD
AND SILVER IN THE UNITED STATES DURING
THE CALENDAR YEAR 1919

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1919.

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint and the Geological Survey working in conjunction, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the figures of the mine production made by the survey. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1919 is estimated to have been \$60,333,400, and the production of silver is estimated at 56,682,445 fine ounces. A comparison of these figures with those for 1918 indicates decrease of production of both gold and silver, the former by approximately 8.3 million dollars and the latter by approximately 11.1 million ounces.

With the exception of Alaska and California, all the States which produce largely of gold show reductions for 1919. Alaska's production increased more than \$500,000 and California's more than \$600,000. The greatest reductions were: In Colorado, 2.5 million dollars; Nevada, 2 millions; South Dakota, 1.4 millions; Arizona, nearly 1 million; and Utah and Montana, about 0.9 million each.

No material increases in silver production were made, but, on the other hand, large decreases occurred in Idaho, nearly 3½ million ounces; in Nevada, nearly 3 million; Montana, 1½ million; and Arizona, Utah, and Colorado show reductions of about 1 million ounces each.

A brief review of mining conditions in each State follows, for which acknowledgment is made to the Geological Survey:

ALASKA.

Alaska mines in 1919 produced gold to the value of \$9,426,032, the smallest output since 1904. Gold and copper mining have always been the principal mineral industries of Alaska, and in 1919 both were subject to great depression throughout the world. Hence, the reduction in the output of both gold and silver. The value of silver produced in Alaska in 1919 was \$705,273, or \$142,516 less than in 1918.

In 1919 about 46.6 per cent of the total gold production came from lode mines, compared with 36.6 per cent credited to lode mines in 1918, and 31 per cent in 1917.

The auriferous lode mines produced during the year gold valued at \$4,392,237, and silver valued at \$121,734. Twenty-three gold-lode mines and two prospects were operated in Alaska in 1919. Twenty-five gold-lode mines were operated in 1918. Of the producing mines seven were in southeastern Alaska, one in the Copper River

district, three on Kenai Peninsula, five in the Willow Creek district, six in the Fairbanks district, and one on Seward Peninsula. In 1919 the average value of the gold and silver contents for all siliceous ores mined was \$1.38 a ton; the average for 1918 was \$1.70 a ton. These averages reflect the dominance in the total lode production of the large tonnage produced from the low-grade ores of the Juneau district.

The copper ores contained \$63,795 in gold and 488,034 fine ounces of silver, valued at \$546,598. The average yield of gold and silver from copper ores was \$1.24 a ton. The value of the placer gold produced in Alaska in 1919 was about \$4,970,000, compared with an output of \$5,900,000 in 1918. The decrease was general for all Alaska districts, except some in the Seward Peninsula and the Kuskokwim regions; it is largely due to conditions that affect gold mining adversely throughout Alaska. Many prospectors have been drawn away from Alaska by high wages and good business opportunities to be secured in the States. Lack of transportation, unfavorable seasonal climatic conditions, and the depletion of bonanza placers have also helped to decrease placer mining. It is estimated that about 466 placer mines were operated in the summer of 1919 and 88 during the previous winter, but many for only a part of the season. The number was 727 in 1918.

Twenty-eight gold dredges were operated in Alaska in 1919, the same number as in 1918. Twenty-two of these operated on Seward Peninsula; two in the Fairbanks district; two in the Iditarod district; and one each in the Birch Creek and McGrath districts. These dredges handled about 1,760,000 cubic yards of gravel and produced gold valued at about \$1,360,000. In 1918 the dredges handled about 2,490,000 cubic yards of gravel and recovered gold worth \$1,425,000. The average gold recovery per cubic yard was about 67 cents in 1919, and 57 cents in 1918. Up to the end of 1919 gold to the value of \$20,395,000 had been mined by dredges.

ARIZONA.

The value of the mine output of gold, silver, copper, lead, and zinc in Arizona in 1919 was \$111,157,872, a decrease of \$90,977,008, or more than 45 per cent. There was a decrease in the output of all metals, but particularly in that of copper, which is the most important resource of the State. The decrease in gold and silver was not so marked as in many of the other Western States.

The gold production had a value of \$4,506,413, a decrease of \$928,614 from that of 1918. Of this amount only \$4,694 represented the value of the placer gold. Mohave County, with \$2,582,331, was first as a gold producer. Cochise County took second place, with \$940,538, followed by Yavapai County, with \$614,968. The largest part of the gold, or \$2,582,821, had its source in bullion from ore treated by amalgamation or cyanidation. Crude ore shipped directly to smelters contained \$1,544,811, and concentrates \$350,679. The gold from deep mines was derived from the following sources: Siliceous ore, \$2,810,180; copper ore, \$1,614,526; lead ore, \$76,515, and copper-lead ore \$498. There was a decided decrease in gold from copper ores corresponding with the curtailed production of copper, and an important decrease in gold from siliceous ores, not-

withstanding the large output from the mines near Oatman in Mohave County, and especially from the United Eastern and Tom Reed mines. More than 98 per cent of the State's gold came from copper ore and siliceous ore combined. With each million pounds of copper the gold output was decreased \$3,000 in 1919. The greater part of the output came from gold ores which were sufficiently rich to pay the high costs of mining and milling. Several properties which produce low-grade gold ore were prevented from operating on account of the unusual costs. In 1919 the largest producers of gold were the United Eastern and Tom Reed companies at Oatman, both of which treat gold ore, and the Calumet & Arizona, United Verde, Copper Queen, and Arizona Blue Bell, from which gold is recovered by the smelting and refining of copper ore.

The silver output amounted to 5,266,605 ounces, a decrease of 1,419,547 ounces, or more than 21 per cent. The value of the output decreased only \$787,554 on account of the price, which was \$1.12 per ounce in 1919. Of the total silver, Cochise County alone produced 2,421,905 ounces, and Yavapai County followed with 1,252,894 ounces. There was a slight increase in Cochise County, but a decrease of 1,250,074 ounces in Yavapai County. The greater part of the silver, or 3,971,687 ounces, came from crude ore shipped to smelters; concentrates contained 1,085,082 ounces, and the gold and silver bullion 117,641 ounces. The sources of the silver output were as follows: Siliceous ore, 1,031,185 ounces; copper ore, 3,711,052 ounces; lead ore, 441,739 ounces, and copper-lead ore 82,593 ounces. Eight mines in Arizona produced more than 140,000 ounces of silver each in 1919. These were the Calumet & Arizona, United Verde, Copper Queen, Magma, Bunker Hill, United Verde Extension, Commonwealth, and Blue Bell mines, all of which are copper mines except the Commonwealth and Bunker Hill properties.

There were 339 mines producing during the year, of which number only 15 were placer mines. The output of ore was 13,727,403 tons, a decrease of 5,311,083 tons, or nearly 28 per cent. Of the total ore, 9,596,953 tons were concentrated to make 651,198 tons of concentrates, 2,334,410 tons were shipped directly to smelters, 193,460 tons were treated in gold and silver mills, the remainder being made up by slag, old tailings, and ore leached.

Arizona is the largest copper-producing State, and the output in 1919 was 538,100,844 pounds, a decrease from 764,855,874 pounds produced in 1918, the lead output was 10,203,078 pounds, and the recoverable zinc output was 1,717,000 pounds.

CALIFORNIA.

The gold-mining industry in California continues, from several causes, in a depressed condition, as it has been for the last three years. The silver situation has not been so bad, as a number of old silver mines have been reopened and become productive, owing to advances in price of that metal. However, as a large proportion of the silver output of the State is recovered from copper ores, and as some of the largest of the copper smelters have been closed down, there was an appreciable decrease in the yield of silver in 1919.

According to Charles G. Yale, of the United States Geological Survey, who annually compiles the figures of production for California,

that State produced 841,638 fine ounces of gold, valued at \$17,398,200 in 1919. This was \$613,800 more than the output of gold in 1918, which may appear surprising when it is considered that all expenses of production have increased so materially and that so many mines have been closed down or had a curtailed production. In explanation, however, it may be stated that the decrease in the output of gold in 1918 as compared with 1917 was abnormally large, amounting to more than three and a half million dollars, so that the increase for 1919 merely shows that mining in California has begun to readjust itself to the present general conditions, at least to some small extent. One very good indication of this readjustment is that the mother-lode mines, which produce a large proportion of the gold-bearing ore of the State, though still having a smaller output than usual, are materially raising the average values of their ore per ton. This increase in value has been steady annually for some years, while the mines have been gradually increasing in depth of workings. In 1912 these mother-lode mines produced 1,299,988 tons of ore averaging \$3.69 per ton, or \$4,803,935. In the last year of record only 845,802 tons of ore were mined and treated from the same mines, but the average value per ton was \$4.26, or a total of \$4,334,061; thus the total output of the metal was almost as much in value, although the ore milled was nearly one-third less in quantity than in 1912.

Another important factor in checking the general decrease in the gold output in the State is the gold-dredging industry, which, although hampered to some extent by excessive costs, scarcity of labor, and curtailment of hydroelectric operative power, shows very little diminution in total yield of gold. Some of the smaller dredges in different fields have ceased operations, because they have worked out their ground, but the loss in that direction has been more than compensated by the construction and operation of new dredges of very large daily capacity. The importance of the dredges in the annual yield of gold in California is shown by the fact that they continue to produce 95 per cent of the placer gold and about 40 per cent of the entire gold output of the State. At present 53 per cent of the total gold produced in California is being taken from the deep or quartz mines and 47 per cent from the placers (including the dredges). To those who predicted the almost absolute cessation of placer mining in California years ago, when hydraulic mining was prohibited in certain counties and when capital was no longer attracted to drift mining by reason of adverse laws and departmental regulations, these proportionate figures of deep and surface gold mining may be a surprise. It may be still further a surprise, moreover, to learn that the leading gold-producing county of the State, Yuba, is entirely a gravel-mining county, where more and larger dredges are operating than elsewhere. The output of gold in this county exceeds that of any one of the mother-lode counties and is three-quarters of a million dollars more than that of the leading deep mine county of the State.

Of course, the very rich high-grade gravel deposits of the early days of California mining, along the bars of the rivers and in the gulches, have long since been worked out. But it is worthy of note that in the last few years the number of productive small placer mines has very largely increased. This is owing to the fact that in the foothill regions, the lower mountain ranges, and even in the valleys in some counties, where orchards and small farms have so vastly

increased in number, communities have been established and the country settled by a stable population, far different in character from the nomadic miners of a few generations past. The occupations of these people are seasonable, especially in the fruit-raising sections, so that they have much time on their hands at certain periods. Therefore, during the rainy season, when water is plentiful, they turn to placer mining in a small way along the gulches, the various river banks and bars, and wherever there are reasonable prospects. Some of them even systematically drift out the auriferous gravel underlying their orange groves and orchards. The aggregate quantity of gold secured in these many small operations is considerable and is from a source at one time supposed to be almost completely exhausted. Some of these people also work quartz mines in a small way on their ranches or orchards and do a good deal of "sniping" in many directions. All these minor activities are revealed by the records of the mints and by the small-lot gold dust purchases of country banks, merchants, and dust buyers, which are ascertained by the careful research of the Mineral Resources Division of the United States Geological Survey.

Although some of the larger gold mines of California have closed down temporarily or have greatly curtailed operations by reason of the existing unfavorable conditions, a number of new or rehabilitated deep mines have become productive. Nearly all these mines, however, are small, are worked mainly by the owners themselves, and produce from a few hundred to a few thousand dollars annually. Small quantities of rich ore have also been taken from isolated mines without caretakers.

The labor conditions in the gold mines of the State, though still unfavorable, were somewhat improved in 1919, but the employers complain of inefficiency, there being apparently a general inclination among the men, particularly in deep mines, to perform less than an honest day's work even when daily wages have been increased.

The depression in the gold-mining industry of California has been due to the fact that steady, continuous operation of the properties has seemed impossible, owing to war conditions, scarcity of skilled labor, curtailment of power, and cost of freight and supplies. Some mines were worked only a few months, some with only one shift, and others have been compelled to lie idle for long periods for lack of power. Most of the output of gold from deep mines has been from the larger and more highly developed ones, and those operated by the owners themselves or with a few men have been generally unprofitable and have ceased work.

The three successive "dry seasons" in California have had a disastrous effect on most branches of the mining industry, but bore most heavily on the gold mines where hoisting, pumping, lighting, and operation of quartz mills had to be carried on. Water for washing gravel and for operating power has been abnormally scarce.

Very little systematic prospecting and preliminary development has been carried on, for it is now almost impossible to obtain capital for investment in any branch of gold mining. Only the richest and most highly developed and equipped mines have been kept in operation and most of the others have been idle awaiting more favorable conditions. The cost of producing an ounce of gold has so greatly increased that most of those mines which had been working on a

narrow margin of profit have had to cease operations entirely for the present.

The output of silver from California mines in 1919 is estimated at 1,153,614 ounces, valued at \$1,293,051. This shows a decrease from the year 1918 of 279,198 ounces in quantity and of \$111,764 in value. This is a higher output and a lower decrease than was to be expected under present circumstances. But one new and highly productive silver mine in the State is responsible for checking any greater reduction in the silver output. California silver is mainly derived from copper and lead ores, the quantity obtained from placer and deep gold mining being comparatively small. By far the largest proportion of silver of the State has usually been obtained by the smelters of Shasta County, but labor troubles and low price of metal kept these smelters and their mines closed in 1919, so that the principal source of the output of silver in the State was stopped. The southern California lead-silver mines produced more in 1919 than in 1918, but most of these properties are old ones just being rehabilitated, so that none of them are now largely productive.

It may be noted, as showing how the adverse conditions have affected metal mining, that although 44 counties of California show gains in population, according to the census, 14 counties show losses, and all these latter are mining counties in the northern part of the State. The greatest loss in population is in Shasta, the leading county in silver and copper, and next in order is Nevada, the leading gold-quartz mining county. Every one of the five mother-lode counties shows a marked falling off in population, the miners having gone elsewhere, as the big mines ceased or curtailed operations in the last few years.

COLORADO.

Shipments of bullion, ore, and concentrates from Colorado mines in 1919, according to Charles W. Henderson, of the United States Geological Survey, contained in recoverable metals \$9,867,927 in gold, 5,639,516 ounces of silver, 3,310,675 pounds of copper, 35,859,090 pounds of lead, and 51,445,429 pounds of zinc. After smelting and refining, these metals will have, a calculated value, at the average price of the metals for the year, of \$22,427,893. In 1918, comparative figures were \$12,751,718 in gold, 7,063,554 ounces of silver, 6,277,332 pounds of copper, 65,960,760 pounds of lead, and 89,133,901 pounds of zinc, with a total calculated value of \$34,160,172.

During 1919, as has been the case for several years, none of the lead-copper smelting plants in the State were operated at full capacity. The Globe plant in April ceased to accept regular consignments of ores, but some special ores, flue dust, and other material were received to aid in disposing of stock on hand and for continuing the plant as a producer of arsenic. The Leadville, Pueblo, Durango, and Salida plants were all operated at reduced capacity.

The United States Zinc Co.'s zinc retort plant at Pueblo was operated at greatly reduced capacity. The River Smelting & Refining Co.'s plant at Florence continued to treat low-grade zinc-lead-copper ores from Colorado only. The Western Zinc Concentrating Co.'s plant at Leadville was operated at increased capacity on Leadville zinc carbonate ores, and the Ohio Zinc Co.'s zinc-oxide plant at Canon City was also operated at increased capacity on zinc-carbonate ores

from Colorado, Nevada, and Utah. The Empire Zinc Co.'s magnetic separation mill at Canon City was operated steadily on Leadville zinc-sulphide ores, but the Western Chemical Co.'s magnetic separation wet concentration mill, treating similar ores, was operated for only a part of the year, although the Western Chemical Co.'s sulphuric-acid plant was active on pyritic ores and also made some electrolytic zinc. Copper ore and matte and cyanide precipitate were shipped from Colorado to the smelter at Omaha and some copper ores were shipped to plants in Utah. The quantity of zinc ores shipped to zinc smelters and zinc-oxide plants in Kansas, Oklahoma, and eastern States decreased greatly. Shipments of manganese, which had assumed considerable magnitude in 1918, ceased with the expiration of contracts on July 1, 1919.

Cripple Creek produced gold valued at \$5,830,000 in 1919, as compared with \$8,119,747 in 1918, a decrease of \$2,280,000. The Golden Cycle roast cyanidation mill at Colorado Springs, which treats about 95 per cent of the high-grade ore shipped from Cripple Creek, was operated steadily except for a three weeks' shutdown during the coal strike in November, when it gave its coal to the city of Colorado Springs. In October the Vindicator washing and flotation mill at Victor was closed, so that less ore was available for the Golden Cycle mill. The Portland Independence cyanidation concentration mill at Victor was the only mill operated continuously throughout the year in the Cripple Creek district.

Lake County, chiefly Leadville, but including also the Lackawanna Gulch, Sugar Loaf, and St. Kevin lode districts and the Arkansas River dredge district, produced bullion and ores containing \$624,000 in gold, 1,515,000 ounces of silver, 10,500,000 pounds of lead, 800,000 pounds of copper, and 37,000,000 pounds of zinc, having a total calculated value of \$5,700,000, as compared with \$843,239 in gold, 2,290,121 ounces of silver, 1,626,534 pounds of copper, 22,469,915 pounds of lead, and 46,715,736 pounds of zinc, having a total calculated value of \$9,381,610 in 1918. Early in 1919 the low price of zinc and lead caused the Leadville operators to post a reduction of \$1 a day in wages, which the miners met by a walkout, and the result was a cut of 50 cents a day in wages and the closing of several large properties. Company work at the long productive Western Mining Co.'s properties ceased at the end of 1918, but lessees assumed operation on part of this property. The Down Town Mines Co. continued operations throughout 1919.

Notwithstanding the removal of the pumps from the lower levels at Aspen early in the year, there was a production of 650,000 ounces of silver and 5,000,000 pounds of lead, which was an increase for silver but a heavy decrease for lead from that district.

In the San Juan region, the Telluride district was the only one to maintain a normal production, the output being \$2,100,000 of gold and 1,380,000 ounces of silver, but the contemplated closing of the Liberty Bell mine and mill, which have been in continuous successful operation since 1896, foreshadows a decrease in production in that camp for 1920. The Tomboy Co., at Telluride, built a new mill, and the Smuggler Union Co. added to its plants during 1919, but the increase in the output of these companies must be considerable to equalize the loss of the Liberty Bell. At Silverton the production has been less than it has been for several years. The fire which

burned the Sunnyside office buildings and the miners' boarding and hotel buildings early in 1919 prevented that large producer from starting complete operation. The Iowa Tiger mill continued operations and made large production. At Ouray the Camp Bird Co. did much exploring work on the vein at the end of its new low-level adit, but did not start milling. The Atlas and Mountain Top mines were in operation and much development and some shipments were made at Red Mountain. Mines in La Platta County made very little production, although development work was done during the summer. Dolores County continued to ship copper ore from Rico, but no lead-zinc ore. Mineral County which had produced at Creede a greatly increased quantity of silver in 1918, showed a considerable decrease in 1919, as one of the largest lessees abandoned work there and one of the other large properties was not so productive as in 1918. Production in Hinsdale County again dropped to desultory shipments of miscellaneous ore.

Early in 1919 the Wellington Co., at Breckenridge, found itself without a market for its zinc concentrates, but continued operation for a few months, storing its concentrates. In September this company began shipping its stored concentrates and shipped also some iron-sulphide ores. The production of zinc from Summit County therefore, which was 15,696,264 pounds in 1918, was only about one-third as much in 1919. Dredges in Summit County produced \$450,000 in gold in 1919, as compared with \$431,000 in 1918.

The zinc mines at Red Cliff, Eagle County, were active producers only during the early part of the year, but development was carried on during the last half of the year.

Production in Gunnison County was confined almost entirely to the zinc produced by the Doctor mine, on Spring Creek, from which there were increased shipments of zinc carbonate ore, and to small shipments of gold-silver ore from Iola and from Ohio City.

Boulder County increased its output of silver from 157,000 ounces in 1918 to 203,000 ounces in 1919, from the Yellow Pine at Sugar Loaf, the White Raven at Ward, and the mines at Caribou.

The mines in Gilpin County were not active, and the closing of the Argo mill and its associated Tremont (Gunnell) mine at the end of the Argo adit reduced the production greatly. This county produced \$83,000 in gold and 72,000 ounces of silver. The Becky Sharp mine produced considerable gold ore, and the Gilpin-Eureka shipped amalgam bullion and concentrates.

In Clear Creek County the low price of lead and zinc closed the principal producing mines at Silver Plume in May, 1919, and thus cut off the usual large silver contribution from that camp. There was a production from this county, however, of \$226,000 in gold and 334,000 ounces of silver. Early in the spring the new Colorado Central mill near Georgetown increased its capacity and throughout the year contributed considerable silver in concentrates derived from the treatment of material from the Equator dump. The mills at Idaho Springs were not active in 1919, for the Argo and Jackson were closed and the Hudson and Newton were operated only on part capacity. The Little Mattie mill resumed operations at the end of the year.

Park County made appreciable increases in the output of gold and silver.

CENTRAL STATES.

As in 1918 only three of the Central States, Michigan, Missouri, and Illinois, produced any silver in 1919. The total production in 1919 was 536,271 ounces, valued at \$600,623, against an output of 564,577 ounces in 1918.

No silver ore was shipped in 1919 and of the total production of silver 441,430 ounces came from the copper lodes of Michigan, a decrease of 68,037 ounces.

The silver production of Missouri was 90,401 ounces compared with 46,939 ounces in 1918. There was a larger quantity of lead desilverized and 60,921 ounces of silver were recovered from this source. Very little silver was derived from copper ores, but a large part of the Missouri silver, 29,480 ounces, was obtained from the copper-nickel-cobalt ores of the Missouri Cobalt Co. in Fredericktown, Mo.

From the lead concentrates derived from southern Illinois fluorspar ores, 4,440 fine ounces of silver were recovered. This was 3,731 ounces less than in 1918, and the average recovery per ton of concentrates smelted was 6.21 ounces in 1919 against 6.65 ounces in 1918 and 5.80 ounces in 1917. The largest producers of galena concentrates containing silver were the Fairview Fluorspar & Lead Co. and the Rosiclare Lead & Fluorspar mines.

EASTERN OR APPALACHIAN STATES.

The mine production of gold in the Eastern or Appalachian States decreased from 694.27 fine ounces, valued at \$14,352, in 1918, to 341.14 ounces, valued at \$7,052, in 1919, of which Georgia produced \$767; Tennessee, \$5,662; North Carolina, \$20; South Carolina, \$81; Vermont, \$377; and Maine, \$145. The production from placer mines decreased from \$6,591 in 1918 to \$715 in 1919 and that from deep mines from \$7,761 in 1918 to \$6,337 in 1919. A few small placer mines were operated in Georgia and none of the gold-milling plants were operated other than for experimental purposes. The low-grade bodies of ore and the scarcity and high cost of labor and supplies resulted in the practical suspension of activity at both deep and placer gold properties. The gold recovered from siliceous ores was only 5.32 fine ounces, while that obtained from copper ores increased from 291.75 fine ounces in 1918 to 301.23 ounces in 1919. Of the gold recovered from copper ores 273.90 ounces was from copper mines in the Ducktown district in Tennessee and the remainder from copper ores mined in Vermont, Maine, North Carolina, and South Carolina.

The mine output of silver in 1919 was 104,690 fine ounces, valued at \$117,253, a decrease of 1,895 ounces but an increase of \$10,668 in value compared with the production in 1918. All the silver except 10 ounces was derived from copper ores, of which 98,288 ounces was credited to Tennessee, 4,142 ounces to Maine, 2,214 ounces to Vermont, 19 ounces to North Carolina, and 17 ounces to South Carolina. Only 2 ounces of silver came from siliceous ores and 8 ounces was contained in placer bullion.

REPORT OF THE DIRECTOR OF THE MINT.

Value of estimated production of gold in the southern Appalachian States, 1799-1919, by States.

IDAHO.

In 1919 the total value of the metal output of Idaho was \$18,374,315 a decrease of \$18,147,843 from that of 1918. Of this total, the gold was valued at \$713,238; silver, \$6,248,543; copper, \$580,834; lead, \$9,664,121; and recoverable zinc, \$1,167,579. Aside from a slight increase in the output of gold, the decrease in production was general on account of a labor strike, which closed many of the mines of the Coeur d'Alene district for several months.

Gold output increased from \$702,816 in 1918 to \$713,238 in 1919. Of this total, the placer gold amounted to \$190,752, against \$276,410 in 1918. The gold won by dredges was valued at \$164,854, a decrease from \$239,762 in 1918. Siliceous ore produced more gold than any other kind, or \$460,198. Gold in copper ore was valued at \$19,889; lead ore, \$40,734; and lead-zinc ore, \$1,653. Boise County was the largest producer of gold and Shoshone County followed closely on account of the dredge operations near Murray. There was a large increase in gold from the mines near Idaho City of Boise County, but a large decrease in Idaho County. Gold, in crude ore, shipped directly to smelters, had a value of \$62,437; gold in concentrates, \$138,524;

and gold in ores amalgamated and cyanided, \$321,525. In 1919 more than 91 per cent of Idaho's gold came from placers and siliceous ore. The operators of mines and prospects in districts far from railroads continued to feel the excessive cost of mining in 1919, and many of the gold mines were idle. The five largest gold producers in 1919 were the Gold Hill and Iowa mine at Quartzburg, the Yukon Dredging Co. at Murray, the Gilmore mine at Gilmore, the Empire Copper Co. at Mackay, and the Independence mine at Ketchum.

The silver output was 5,579,056 fine ounces, a decrease of 3,593,284, or nearly 40 per cent. The greatest production, and also the largest decrease, occurred in Shoshone County. A decrease in Custer County was offset by increases in Washington, Blaine, and Boundary Counties. The value of the output decreased by \$2,923,797, notwithstanding the higher price for the metal. Most of the production of silver came from lead ore and lead-zinc ore, the former supplying 4,757,259 ounces, and the latter 493,027 ounces. Copper ore supplied 246,983 ounces; siliceous ore, 78,531 ounces; zinc ore, 862 ounces; and small quantities came from placers and copper-lead ore. Concentrates of various kinds supplied 3,972,416 ounces of silver; crude ore shipped to smelters, 1,599,474 ounces; and bullion from gold and silver mills, 5,264 ounces. The Coeur d'Alene region alone produced 4,815,200 ounces of silver. In 1919 four mines in Idaho produced more than 500,000 ounces of silver each. They were the Bunker Hill & Sullivan property at Kellogg, the Hecla at Burke, the Caledonia near the Bunker Hill, and the Hercules at Burke.

There were 210 mines producing in 1919, of which 72 were placer mines and 138 deep mines. The total ore mined and treated was 1,457,395 tons, a decrease of 634,224 tons from the total of 1918. Of this tonnage, 1,171,102 tons were concentrated, 79,399 tons were shipped directly to smelters, and 40,844 tons were treated in gold and silver mills; the remainder, 166,050 tons, consisted of old tailings. The mines of Idaho also produced 3,122,763 pounds of copper, 182,341,898 pounds of lead, and 15,994,229 pounds of recoverable zinc. The Bunker Hill smelter and refinery at Bradley, Idaho, were active throughout 1919, treating ore and concentrate principally from the Coeur d'Alene region, in spite of the labor strike.

MONTANA.

The mine output of gold, silver, copper, lead, and zinc in Montana in 1919 had a total value of \$62,037,191, a decrease of \$59,368,378 from that of 1918. The decrease was general, but the decrease in copper was especially noticeable as the value of the output fell from \$79,824,188 in 1918 to \$31,616,520 in 1919. The operation of the electrolytic zinc plant at Great Falls and the saving of metals from residues have prevented greater decreases in gold, silver, and lead.

The gold output was valued at \$2,229,588 in 1919, a decrease of \$875,176. Of this total \$1,938,158 came from deep mines and \$291,430 from placers. Most of the placer gold was won by dredge operations in Alder Gulch, of Madison County, but production from this source decreased considerably. As in former years, the gold was derived principally from siliceous ores, and aside from the placer output, most of the remainder came from copper ore, followed by that from lead-zinc ore and lead ore. The gold from crude ore

shipped to smelters contained \$654,317; concentrates, \$525,960; bullion from amalgamation and cyanidation mills, \$730,683; and \$27,198 from old tailings and ore leached. Many of the mines producing low-grade gold ore, especially in Phillips, Fergus, and Lewis and Clark Counties, were unable to continue operations on account of the great expense of labor and supplies. Twenty mines in Montana produced about 60 per cent of the total output of gold. Seven of these properties produced gold valued at more than \$50,000 each in 1919. These were the Barnes King mines at Marysville, copper property of the Anaconda Co. at Butte, the Conrey Placers, at Ruby, Southern Cross, at Georgetown, North Moccasin, at Kendall, the zinc property of the Anaconda Copper Mining Co., and the Butte and Superior, at Butte.

The silver output decreased from 16,797,479 ounces in 1918 to 12,538,872 ounces in 1919, a decrease of 4,258,607 ounces, or 25 per cent. The value of the output was \$14,046,123, a decrease of \$2,751,536. Silver Bow County, principally the Butte region, produced 10,531,113 ounces, and Granite County was next with 591,228 ounces. Of the total silver, 9,284,128 ounces were derived from concentrates, 3,006,763 ounces from crude ore, and 84,941 ounces from bullion produced at gold and silver mills. Separated as to kinds of ore, copper ore supplied most of the silver; lead-zinc ore was next; and siliceous ore followed. Placers produced only 2,309 ounces of silver. Twenty mines produced more than 90 per cent of the total silver. Seven properties produced more than 400,000 ounces of silver each in 1919. These were the copper property of the Anaconda Co., Butte and Superior, zinc mines of the Anaconda Co., North Butte, Elm Orlu, Davis Daly, and Granite Bimetallic mines. Other large silver productions came from the Butte Reduction Works' dump, the Cascade Silver, East Butte, Angelica, and Tuolumne mines.

There were 456 producing mines, of which 395 were deep mines and 61 were placer properties. The total output of ore was 4,183,594 tons, a decrease of 3,640,373 tons over that of 1918. Of the total, 3,089,433 tons were concentrates, 294,268 tons were shipped directly to smelters, 105,044 tons were treated in gold and silver mills, and 694,849 tons of ore and old tailings were either concentrated or leached. In addition to gold and silver, the deep mines of the State produced 169,981,288 pounds of copper, 34,437,764 pounds of lead, and 168,763,823 pounds of recoverable zinc.

NEVADA.

The total value of the production of gold, silver, copper, lead, and zinc in Nevada in 1919 was about \$23,634,000, a decrease of 50 per cent from that of 1918. There was a decrease in quality and value of all of these metals, but that in copper was notable as it amounted to more than \$19,000,000 in value.

The gold output had a value of \$4,718,000 against \$6,619,937 in 1918. This decrease of 29 per cent was due in large part to the curtailed output from Goldfield in Esmeralda County, which has been the largest gold-producing district of the State for many years. The production of gold from the silver ores of the Tonopah district of Nye County was also decidedly reduced. The Elko mine, at Jarbidge in Elko County, was the largest producer of gold in the State in 1919.

Other mines which produced gold valued at more than \$200,000 each during the year were the Nevada Consolidated, from copper ore, and the Fairview Round Mountain, Goldfield Consolidated, Florence Goldfield, and Consolidated Virginia, from siliceous ores. Other important gold producing properties were the West End, Elko Prince, Tonopah Belmont, White Caps, Round Mountain, Tonopah Extension, Ophir Silver, Olympic, and Techatticup mines. Much less gold was produced from mines in the Seven Troughs and Rochester districts than in past years. Most of the gold produced in Nevada is won from siliceous ores, which are either amalgamated or cyanided. Details as to classification of ore and the production of the various districts may be consulted later in the publication "Mineral Resources," of the United States Geological Survey. As in former years, the placer gold came largely from Round Mountain and Manhattan districts of Nye County, and the Battle Mountain district of Lander County.

The production of silver in 1919 was 7,177,000 ounces, against 10,000,599 ounces in 1918, a decrease of 28 per cent. The mines of Tonopah, in Nye County, produced most of the silver of the State, but the output has been steadily decreasing in the last few years. Production of this district decreased from 7,068,737 ounces in 1917 to 5,929,920 ounces in 1918 and to about 3,535,000 ounces in 1919. Some of the largest producers of silver in 1919 were the West End, Tonopah Extension, Tonopah Mining, Tonopah Belmont, Nevada Wonder, Rochester Silver, Montana Tonopah, Prince Cons., Nevada Packard, Elko Prince, and mines at Virginia City. In the Divide district of Esmeralda County the Tonopah Divide mine became an important shipper of silver ore. Most of the silver of the State comes from siliceous ore treated by cyanidation, only a small part being won from concentrates and crude ore smelted. The output of copper, lead, and zinc was decreased approximately 50 per cent from the totals of 1918. The Nevada Consolidated copper plant at Ely, was operated at greatly reduced tonnage, and the Mason Valley plant at Thompson was active only two months of the year.

NEW MEXICO.

Bullion, ore, and concentrate shipments from New Mexico mines in 1919, according to Charles W. Henderson, of the United States Geological Survey, contained in recoverable metals \$651,353 in gold, 822,000 ounces of silver, 2,800,000 pounds of lead, 52,200,000 pounds of copper, and 8,000,000 pounds of zinc. Comparative figures for 1918 were \$682,791 in gold, 782,421 ounces of silver, 8,398,239 pounds of lead, 98,264,563 pounds of copper, and 24,050,324 pounds of zinc. The operations of all mines were affected by the increasing prices for labor and materials, and all except the silver mines suffered from low metal prices. The decrease in the output of all metals except gold and silver is startling.

Mills of the Mogollon district, Socorro County, produced \$148,100 in gold and 379,000 ounces of silver, as compared with \$119,710 in gold and 302,902 ounces of silver in 1918. In 1919 the Mogollon Mines Co.'s mill was operated steadily, but the Socorro Mining & Milling Co.'s mill was closed April 1, and operations were not resumed during the year. The output of gold from the Aztec mine, at Baldy, Colfax County, was not so large in 1919 as in 1918. The shipments

of gold-bearing siliceous copper ores from Lordsburg increased heavily, but there was a decrease in the shipments of gold-bearing iron-copper ores from Orogrande. The San Pedro copper-matting plant was idle, and was dismantled during the year. Very little gold or silver ore was shipped from Pinos Altos. The Whiteoaks district continued to produce gold from amalgamating mills.

Copper has long been an important metal product of New Mexico, and since operations were begun by the Chino Copper Co. at Santa Rita in 1910 the State's output of this metal has been large. The large decrease in the output of copper in 1919 is therefore particularly impressive, for the total output is only a little more than half that in 1918. In 1919 the Chino Copper Co.'s output was 42,325,449 pounds, as compared with 79,340,372 pounds in 1918. Beginning in January, 1919, with an output less than the average monthly output in 1918, this company curtailed operations during the rest of the year to about 50 per cent of its capacity. The Burro Mountain branch of the Phelps Dodge Co., which in 1918 produced 53,146 tons of concentrate, averaging 14.9 per cent copper, was even more seriously affected by the drop in the price of copper and suspended milling operations early in the year, and did not resume. The 85 Mining Co., at Lordsburg, made a large increase in shipments in 1919, but shipped crude ore entirely that year, as compared with concentrates and crude ore in 1918. The copper ore shipments from Orogrande decreased greatly.

The shipments of lead ore from New Mexico decreased greatly. Hardly any lead ore was shipped from the Organ Mountains district, and the shipments from the Central district, Grant County, and the Magdalena district, Socorro County, were less than in 1918. Shipments from the Cooks Peak and Victorio districts, Luna County, were almost equal to those of 1918.

The output of zinc sulphide and zinc carbonate ores was likewise greatly decreased. The Ozark mill, at Kelly, was operated only in an experimental way, and the Cleveland mill, at Pinos Altos, was operated for only a short time. The Hanover mill was not operated to its full capacity. Much less carbonate zinc ores were shipped from Hanover, Kelly, and Cooks Peak than in 1918. The Republic Co., at Hanover, shipped a considerable quantity of high-grade zinc sulphide ores. The Grubnau zinc oxide plant, at Waldo, Santa Fe County, built in 1917, continued operations in 1919 on New Mexico zinc carbonate ores.

OREGON.

The total production of gold in Oregon in 1919 was 53,029 fine ounces, valued at \$1,096,200, or \$169,500 less than in 1918. This loss in output was mainly in the dredge and hydraulic mines, and in the larger deep mines. The decrease in yield of gold was due to war conditions generally, but more specifically to scarcity of skilled labor and scarcity of water for washing gravel and for power. The watercourses of the State were so low in the last two months of the year that hydroelectric power was almost entirely cut off from larger properties, including the gold dredges. The dredges of the State, ordinarily producing 57 per cent of the placer gold and 22 per cent of the total gold, decreased their output for the year about 22 per

cent. Owing to high costs of operations the smaller gold mines of all classes were unprofitable and numbers of them lay idle most of the year. The larger deep mines were obliged to curtail operations materially for the reasons given, and some of them ceased work entirely for a time. Most of the Oregon placers are worked by the hydraulic system, but the output of gold by the dredges is greater than that by all other forms of placer mining combined.

There are only about 100 producing metal mines in Oregon; six of them produce 80 per cent of the output of all the metals mined in the State, and one of them produces 25 per cent of the total value of all metals combined. There were in 1919 three gold dredges operating productively in Oregon, one of them a new enterprise.

The yield of silver in Oregon, always small, was 236,620 fine ounces, valued at \$265,220 in 1919, which was an increase in quantity of 107,470 fine ounces and in value of \$138,594. This increase was due mainly to the enlarged operations of the principal copper mine of the State.

There were no new large mining operations inaugurated in Oregon in 1919, and fewer small mines were worked productively than in 1918. The State, like other Western States, lacks capital for the purchase, equipment, and operation of metal mines. One feature worthy of note, however, is the gradual increase in the average value per ton of the ore in the older quartz gold mines of the State. For this reason, although the ore mined and treated shows a reduction in quantity, the relative output of gold holds its own.

The most productive county in the State continues to be Baker, which furnishes 78 per cent of the total value of all metals mined, including 79 per cent of the gold. Baker is followed in the order named by Josephine, Grant, and Crook Counties. The counties of Clackamas, Curry, Douglas, Lane, Malheur, Umatilla, Wallowa, and Wheeler make comparatively small productions. The largest mining operation in Oregon is that of the Homestead Iron Dyke Co., a property in Baker County. The most productive of the placers and the largest producer of gold is the Powder River Dredge Co., also in Baker County. The largest producers among the deep mines, aside from the Homestead Iron Dyke, are the Baker Mines Co. and the Cornucopia Gold Mines, both in Baker County. The most productive hydraulic operation in Oregon is that of the Waldo Corporation, in Josephine County.

SOUTH DAKOTA.

Production of the precious and associated metals in South Dakota is confined to the Black Hills, in Lawrence, Custer, and Pennington Counties. Bullion produced from ore mined and reduced in 1919 and ore shipped in 1919 contained recoverable gold to the amount of \$4,863,000 and 115,500 ounces of silver. Nominal quantities of lead and copper were contained in ore shipped to smelters.

On account of shortage of labor, the Homestake mine and reduction plants were operated at 90 per cent of full capacity until October 5, when a fire which had started on the 800-foot level on September 25, had become so serious that it became necessary to flood the mine. All mine production ceased on October 5, and the amalgamation mills and cyanidation plants were operated only long enough to carry through the ore then in process of reduction.

The Trojan mine and cyanidation mill were operated steadily throughout the year.

The Mogul cyanidation mill was operated continuously on ore from the Ofer Co.'s property to September 30, 1919, when both mining and milling operations ceased.

TEXAS.

Texas mines in 1919 yielded 538,564 ounces of silver, and small quantities of gold, copper, and lead.

Since the beginning of mining in Texas in 1885 the output of silver has been 14,782,255 fine ounces, having a commercial value of \$10,367,619. The greater part of this silver has come from the Presidio silver mine, in the Shafter district, Presidio County.

UTAH.

The value of the gold, silver, copper, lead, and zinc, from mines in Utah, in 1919, was \$45,169,328. This represents a decrease of \$40,878,269 from that of 1918, which was \$86,047,597. The decrease was general, but that of copper was unusually large. Metal prices other than silver were lower in 1919, expenses remained excessive, and the market for ores was poor.

The gold output was valued at \$2,159,471, a decrease of \$789,699 from that of 1918. Of this total, Salt Lake County produced \$1,399,557 in gold and Juab County produced \$495,193. Separated as to source, copper ore was most important, containing gold valued at \$803,591, a decrease from \$1,570,234 in 1918. Lead ore supplied in gold, \$362,897; lead-zinc ore, \$471,036; siliceous ore, \$521,274; and copper-lead ore, \$673. There was no output of gold from placers in 1919. During the year there was some improvement in the quantity of ore treated by amalgamation and cyanidation. Gold from this source was valued at \$52,100. Concentrates of various kinds produced gold valued at \$1,121,810, of which the copper concentrates contained \$604,763, and the lead concentrates \$511,769. The value of the gold in crude ore shipped to smelters was \$947,789, of which \$415,407 in gold came from siliceous ore. The remainder had its source in ore leached or old tailings, and slag, shipped or treated. Shipments of copper ore from the Bingham district were decidedly curtailed in 1919, and the gold from these ores was correspondingly decreased. In 1919 six mines in Utah each produced gold valued at more than \$50,000. These were the Utah Copper, Utah Consolidated, Centennial Eureka, Chief Consolidated, Deer Trail, and Grand Central mines.

The silver output of Utah decreased from 13,455,597 ounces in 1918 to 11,649,961 ounces in 1919, or 1,805,636 ounces. Juab County produced 4,822,227 ounces of silver; Salt Lake County, 1,937,006 ounces; Utah County, 1,993,381 ounces; and Summit County, 1,533,588 ounces. Separated as to source, the silver came principally from lead ore, which supplied 6,664,219 ounces. Siliceous ore supplied 3,645,909 ounces; copper ore, 586,417 ounces; lead-zinc ore, 714,480 ounces; and copper-lead ore, 38,936 ounces. Crude ore shipped to smelters supplied 9,409,278 ounces; concentrates, 1,592,613 ounces; and gold and silver bullion, only 64,473 ounces. From ore leached and from tailings and slag smelted or treated, 583,597 ounces

were produced. The Tintic district, in Juab and Utah Counties, produced 6,779,829 ounces, against 6,681,644 ounces in 1918. The Bingham district of Salt Lake County produced 1,607,132 ounces, and the Park City region, in Summit and Wasatch Counties, 1,945,670 ounces. Six mines in Utah produced more than 400,000 ounces of silver each in 1919. These were the Chief Consolidated, Tintic Standard, Silver King Coalition, Ontario, United States Mining Co., and Judge mines.

There were 179 producing properties in 1919, all of which were deep mines. The ore output decreased from 14,705,719 tons in 1918 to 6,745,423 tons in 1919. Most of this, or 5,985,365 tons, was concentrated, making 381,085 tons of concentrates. There were 607,840 tons of crude ore shipped to smelters, and only 14,614 tons were treated in gold and silver mills. Four smelting plants were active at Murray, Midvale, Garfield, and International, Utah.

WASHINGTON.

The production of gold, silver, copper, and lead in Washington in 1919 had a total value of \$968,961, a decrease of \$498,460 from the production of 1918. The decrease was general, but principally in lead and copper. The inactivity at the mines in 1919 was due to the expense of mining, as well as other conditions, which closed some of the custom smelters in Canada. Most of the gold, silver, and copper resulted from the smelting of ore and concentrates at Tacoma, Wash.

The gold output had a value of \$252,862, a decrease of \$51,796, or nearly 17 per cent. The only important production of gold came from Ferry County, which includes the Republic district. In 1919 the county produced \$245,141 in gold, a decrease of \$30,925. Most of the gold of the State, or \$248,412, came from siliceous ore, principally from the Republic district. Copper ore supplied only \$3,163 in gold, and placers, \$1,247. Lead ore was not an important source. Gold contained in crude ore shipped was valued at \$247,928; gold in bullion, \$114; and gold in concentrates, \$3,573. Since 1860 Washington has produced \$28,006,212 in gold. The Quilp mine at Republic was the largest gold producer in 1919, followed by the Last Chance and Knob Hill mines in the same district.

The silver output in 1919 was 259,384 ounces, valued at \$290,490 a decrease of 50,709 ounces. Stevens County was the main silver producer, with 156,562 ounces, and Ferry County followed with 65,684 ounces. Of the total silver, 146,891 ounces had its source in copper ore, 104,980 ounces came from siliceous ores, 5,251 ounces from lead ores, and 2,244 ounces from copper-lead ore. Concentrates contained 117,847 ounces of silver; shipping ore, 141,518 ounces; and ores treated in gold and silver mills, only 1 ounce. The United Copper mine at Chewelah was the largest producer of silver in the State, followed by the Last Chance mine at Republic.

There were 7 placers and 42 deep producing mines. The latter, in addition to gold and silver, produced 1,676,576 pounds of copper and 2,146,157 pounds of lead, but no zinc ore was marketed during the year. The quantity of ore sold or treated was 100,879 tons, a decrease of 38,032 tons. Of this quantity, 30,818 tons were shipped directly, 70,054 tons were concentrated, and 7 tons were treated in amalgamation or cyanidation mills.

WYOMING.

Mining for the precious and associated metals in Wyoming in 1919 was confined almost entirely to desultory assessment and development work. Production in 1919 was confined to the shipment of several cars of ore-carrying copper and a very small content of silver from the Sunrise iron mine at Hartville. The mining of this copper ore was incidental to the mining of a large deposit of iron ore, which for years has been one of the chief sources of iron for the Colorado Fuel & Iron Co.'s steel plant at Pueblo, Colo.

**PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES DURING
THE CALENDAR YEAR 1919, BY STATES.**

The Bureau of the Mint and the Geological Survey have issued the following joint statement of the final compilation of the production of gold and silver in the United States during the calendar year 1919:

State or Territory.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Value. ¹
Alaska.....	481,984	\$9,963,500	690,151	\$773,570
Arizona.....	222,965	4,609,100	5,702,911	6,392,222
California.....	841,638	17,398,200	1,153,614	1,293,051
Colorado.....	495,810	10,249,300	5,966,606	6,687,790
Georgia.....	34	700	8	9
Idaho.....	34,085	704,600	5,933,076	6,650,207
Illinois.....			6,000	6,725
Maine.....	10	200	4,142	4,643
Michigan.....			425,610	477,054
Missouri.....	14	300	75,991	85,176
Montana.....	116,918	2,416,900	15,012,258	16,826,790
Nevada.....	225,384	4,659,100	7,045,395	7,896,972
New Mexico.....	28,319	585,400	851,821	954,781
North Carolina.....	5	100	19	21
Oregon.....	53,029	1,096,200	236,620	265,220
Philippine Islands.....	41,119	850,000	15,715	17,614
South Carolina.....	5	100	2	2
South Dakota.....	255,889	5,289,700	122,068	130,822
Tennessee.....	271	5,600	97,554	109,345
Texas.....	19	400	539,483	604,690
Utah.....	109,661	2,266,900	12,542,623	14,058,650
Vermont.....	19	400	2,200	2,466

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES SINCE 1792.

The production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Production of gold and silver in the United States from 1792 to 1844 and annually since.

[The estimate for 1792-1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint.]

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1919.

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the mint at Philadelphia and the United States assay office at New York hold the foremost places; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private

refineries during the calendar year 1919, with the class of material from which they were made:

Gold and silver issued for use in the industrial arts during the year ended Dec. 31, 1919.

Material used.	Gold issued (value).			Silver issued (weight).		
	Government institutions.	Private refineries.	Total.	Government institutions.	Private refineries.	Total.
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Fine ounces.</i>	<i>Fine ounces.</i>	<i>Fine ounces.</i>
Bullion, old plate, etc.	68,725,770	3,264,579	71,990,349	2,512,656	30,110,521	32,623,177
United States coin.		1,259,619	1,259,619		7,378	7,378
Total.	68,725,770	4,524,198	73,249,968	2,512,656	30,117,899	32,630,555

Estimating that the total amount of gold coin used in the arts during the calendar year 1919 has been \$3,500,000, and silver coin \$100,000, equivalent to 77,344 fine ounces, the total industrial consumption of gold was \$75,490,349, and of silver 32,700,521 fine ounces.

In order to arrive at the net consumption in the arts there should be deducted from the foregoing totals the amount of old jewelry, plate, etc., included in the private refinery returns and also the same class of material returned to monetary use. In the year 1919 these amounts aggregated \$19,354,398 in gold and 6,463,002 fine ounces in silver, which leaves as the net amount of new material devoted to industrial use, \$56,135,951 gold and 26,237,519 fine ounces silver.

Gold furnished for use in manufactures and the arts and classification of the materials used, by calendar years, since 1880.

REPORT OF THE DIRECTOR OF THE MINT.

LOSSES AND GAINS ON WITHDRAWN COIN.

The loss on face value of gold coin totaling \$5,124,520.50 withdrawn from circulation during the fiscal year 1920 was \$45,147.87, of which \$2,761.89 was reimbursable from the appropriation provided for that purpose. The loss on face value of subsidiary silver coin totaling \$804,727.19 withdrawn from circulation was \$57,722.39, all being reimbursable from the appropriation provided. The reimbursable loss, provided for by appropriation, on minor coin totaling \$123,636.33 withdrawn during the fiscal year was \$6,019.52.

The gain on recoinage of 10,000,000 standard silver dollars into subsidiary coin will amount to \$692,068.43.

Standard silver dollars (mutilated), purchased as bullion for use in the manufacture of subsidiary silver coin (since 1883).

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (3½ 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

NOTE.—Later figures are not available.

THE COURSE OF SILVER AND GOLD.

The following review of the London market during the calendar year 1919 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

At the conclusion of our last annual circular we ventured to express the opinion that the condition of the silver market suggested a further rise in price, and the course of events during the year just past has amply justified the forecast, the market having risen to a height which has had no precedent in any earlier time, and, except for occasional weakness for a few days at a time, the rise has been progressive from the beginning of the year to the end.

The lowest rate was 47½d. per ounce standard, which was stationary from February 20 to March 25, and the highest, 79½d., on December 16. The closing rates to-day are 76d. per ounce standard for cash and 74d. for two months, and the average rate for the year is 57.059d.

At the beginning of the year the price remained under Government control until May 8, the basis being the American maximum of 101½ cents per ounce fine, plus the cost of bringing the silver to England. The variations during the first four months were the reflection of movements in the New York exchange and the cost of freight and insurance, the latter being altered from time to time as shipping facilities were increased and the danger from floating mines gradually disappeared. During this period the Government was purchasing silver in the United States for shipment to India to supply the continual need of rupees in our dependency, including the balance of the \$300,000,000 which had been placed at our disposal by America in the previous year. There was a total shipment from America to India of nearly £22,000,000 worth of silver before the point was reached when the currency requirements of India were put into a safe position.

The actual course of prices may be stated briefly as follows: Opening at 48½d., which remained the figure until February 10, the price fell in the latter part of the month to 47½d., the lowest point touched; this coincided with the end of the Government control of the exchange between here and New York, which had for so long been fixed at \$4.76 per £1, but as the exchange weakened the cost of silver in London increased, and by the end of March had reached 50d. It remained at about 1d. lower until May 8, on which date the British Government removed their control of the price and permitted again the export of silver, the United States having the day before abrogated the imposed maximum of 101½ cents.

The immediate effect was to cause a rise of 5d. per ounce and a rise of a further 4½d. the next day; but the market had taken too sanguine a view, and by May 21 the price had receded again to 51d. per ounce standard. From this date onward rates improved rapidly, and 53d. was reached by the end of May; and it may be said that, except for occasional short-lived reactions, the price continued to mount day by day all through the months until the culminating point of 79½d. on December 16.

The outstanding feature of the market has been the continual rise in the Chinese exchanges, inducing large purchases of silver for shipment to China. These for a long time were made exclusively in America, and nearly every steamer from San Francisco carried large amounts to Shanghai. As these purchases were very insistent, the price was pushed higher there than it was in London, and the supplies usually received from the United States being no longer accessible here, and our own market being poorly supplied in consequence, the buyers for trade purposes and shipment to the Continent obtained the silver with difficulty, and sellers were able to obtain a higher price, which corresponded more or less with the trans-Atlantic ones; and although the rates were continually quoted higher, considerable business was done daily. Latterly purchases for shipment to China from London were also being made, and the sense of a rising market encouraged a good deal of speculative buying, which was generally successful, as better prices were so frequently obtained when the forward date matured for which these purchases were made.

It is not easy to explain why there has been such pronounced and continued firmness in China exchanges, but it must be remembered that in 1916 China parted with 43,000,000 ounces of silver at the comparatively low rate of that time and 39,000,000 ounces in 1917, as India was coining heavily, and since the cessation of war, when the opportunity came to ship the accumulation of years of eastern produce, the balance of trade became largely in favor of China; and not only had the former sales of silver to be recovered, but new supplies were required to equalize the shipments of commodities, and also there is no doubt that some dealers in exchange who thought the rise in exchange was excessive took the wrong view and have had to cover their commitments at very onerous rates. The shipments of silver from San Francisco to

China during the first nine months of the present year amounted to nearly £6,000,000, and probably a further estimate of £4,000,000 since would not be far wrong in addition to considerable amounts from London direct in the last two months.

Until May 10 speculative dealings were forbidden as contrary to public policy, but since that date a forward quotation (for two months' delivery) has been fixed daily, which has had the effect of considerably broadening the market and enabling smelters and others who could not deliver immediately to take advantage of this release from a restriction made in the early part of the war.

Quotations for forward delivery, as compared with that for immediate use, have shown many fluctuations, the two months' rate in May and June being the same as the spot rate, while later on for a time it was rather higher, but when the inquiry for ready silver became more pronounced, the other quotation fell to a discount, and since September it has generally ruled from 1d. to 2d. below, and has lately been sometimes as low as 2½d. below the price for cash.

In the first half of the year our own mint coined about £3,500,000 of silver coin, and India absorbed nearly £22,000,000, and if these totals are added to the amount spoken of above for China, say £10,000,000, it is hardly surprising that the price has attained its high level.

The continued and unprecedented cost of silver has made it necessary to raise from time to time the value of the rupee from 1s. 6d. at the beginning of the year to 2s. 4d. on December 12, and this increase naturally had a great effect on Indian trade, and has proved very expensive to all who had occasion to remit money there; and when the price of silver reached its highest point considerable alarm was felt as to the effect on the other currencies of the world, including our own, as the various silver coinages became intrinsically higher than their currency values. No doubt with a view to correct this to some extent, on November 26 the United States decided to allow the unused balance of the dollars coined under the Sherman Act, hitherto held in reserve, to be acquired at the rate per dollar for each coin, and so provided additional silver for the needs of China; possibly, also, in case our own Government should presently require to coin additional rupees; and as this balance of dollars represented about 70,000,000 ounces of metal, a further rise in price was thereby checked; but even so, at the low exchange of New York which was then ruling the silver thus acquired could not be sold in this market under about 72d. per ounce standard, and now, with a lower exchange still, it would be much higher and can not be expected to be much below until the exchange in China falls to a considerable extent.

The conditions of the silver market are so abnormal that it is even more difficult than usual to form a reliable opinion as to its development. The present quotations of 76d. for cash and 74d. for forward silver seem to be too high to last, as, with the exception of the China demand, the inquiry for silver is comparatively small, and, the rate having attained a level at which it is possible to sell the silver coins of several European countries with advantage, it seems probable that this may form a new source of supply.

On the other hand, we have still to reckon with the great demand for China, which, in the opinion of many, may be expected to continue. It has just been stated that the United States Treasury has contracted with the three American banks to whom has been allotted the monopoly of this business to sell 20,000,000 silver dollars at \$1.35 per ounce fine delivered in China—a good indication of what is expected in this direction in the near future.

The equivalent of this price at the exchange of \$3.80 being just under 78d. per ounce standard in London, about 2d. above the present quotation, the market will no doubt be affected by it, and silver may therefore for some time to come remain high.

Although the supply of rupees in India is sufficient for the present, it is not by any means unlikely that more may be required later. The monsoon was a good one, and additional currency may be necessary, as the policy of the Indian Government is not to issue gold for notes, but rather to make use of the supply they have to obtain the premium which is being paid there for the more valuable metal. It is therefore not unlikely that the present high prices for silver may be maintained for a considerable while, although some reduction may reasonably be looked for a few months hence.

Quite a considerable amount of old silver plate has been melted during the year when the price went to a high figure, and has served to supply metal for the use of the silversmiths for the manufacture of new goods at a time when the market in other respects was very restricted.

Gold.—Owing to the continuation of the restriction as to the export of this metal, and the regulation which required that all arrivals should be sold to the Bank of England, for the greater part of the year gold was hardly obtainable for its ordinary uses, and very high prices had to be paid by jewelers and others to obtain the very

small quantities that were available. This was felt to be a great injustice by the owners of the South and West African mines, and efforts were made to obtain an alteration of such an abnormal state of things, and eventually the Government decided to modify their attitude, and an agreement was reached permitting the weekly arrivals of gold to be reexported under license. Although this did not secure a free market absolutely, it enabled the gold which was imported to be sold in the best market, and large amounts have been taken weekly for export to America, India, France, Switzerland, and other countries to meet their requirements. A large amount has been purchased and sent to India on Government account, but any bought on private account and sent to India is not allowed to be imported into that country unless it is first sold to the Indian Government at the prices fixed from time to time for that purpose.

To meet the native demand, however, in India, amounts of gold are now offered periodically for tender with a minimum price below which tenders are not accepted, and by this means a large profit is obtained for the benefit of the Government of India. The gold serves also to increase the metallic reserve there to secure the convertibility of the notes current in India in case the demand for rupees should increase to anything like that of recent years. The highest price for gold was 111s. 3d. per ounce fine on December 18.

NOTE.—The normal London gold price is 77s. 9d. per standard ounce ($\frac{1}{12}$ fine), or 84s. 11½d. per fine ounce.

Average commercial ratio of silver to gold each calendar year since 1687.

[NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cablegrams from London to the Bureau of the Mint, from 1897 to 1917 from daily London quotations, and since from daily New York quotations.]

VALUES OF FOREIGN COINS.

The following values, calculated by the Director of the Mint, were proclaimed by the Secretary of the Treasury under the provisions of section 25 of the act of August 27, 1894, as the basis for estimating the value of foreign merchandise exported to the United States during the quarter beginning October 1, 1920:

Country.	Legal standard.	Monetary unit.	Value in terms of United States money.	Remarks. ¹	
Argentine Republic....	Gold.....	Peso.....	\$0.9648	Currency: Paper, convertible at 44 per cent of face value; exchange rate, gold \$0.8450	
Austria-Hungary.....	do.....	Krone.....	.2026	Exchange rate about \$0.0044=1 krone.	
Belgium.....	Gold and silver.	Franc.....	.1930	Member Latin Union; gold is actual standard; exchange value \$0.0705.	
Bolivia.....	Gold.....	Boliviano.....	.3893	12½ bolivianos equal 1 pound sterling; exchange rate about \$0.3175.	
Brazil.....	do.....	Milreis.....	.5462	Currency: Government paper; exchange rate about \$0.1775 to the milreis.	
British Colonies in Australasia and Africa.	do.....	Pound sterling.....	4.8665		
Canada.....	do.....	Dollar.....	1.0000	Exchange rate about \$0.9025.	
Central American States:					
Costa Rica.....	do.....	Colon.....	.4653	Exchange rate \$0.2666=1 colon.	
British Honduras.....	do.....	Dollar.....	1.0000		
Nicaragua.....	do.....	Cordoba.....	1.0000	Exchange rate \$0.98.	
Guatemala.....	Silver.....	Peso.....	.6864	Guatemala: Currency, inconvertible paper.	
Honduras.....				Honduras: Currency, bank notes.	
Salvador.....	Gold.....	Colon.....	.5000	Exchange rate about \$0.4807.	
Chile.....	do.....	Peso.....	.3650	Currency: Inconvertible paper; exchange rate about \$0.1612.	
China.....	Silver.....	Tael.....	Amoy.....	1.1252	The tael is a unit of weight, not a coin. The customs unit is the Haikwan tael. The values of other taels are based on their relation to the value of the Haikwan tael.
			Canton.....	1.1218	
			Cheefoo.....	1.0762	
			Chin Kiang.....	1.0992	
			Fuchau.....	1.0408	
			Haikwan (customs).....	1.1449	
			Hankow.....	1.0528	
			Kiaochow.....	1.0904	
			Nankin.....	1.1135	
			Niuchwang.....	1.0552	
			Ningpo.....	1.0818	
			Peking.....	1.0970	
			Shanghai.....	1.0278	
			Swatow.....	1.0394	
			Takau.....	1.1323	
			Tientsin.....	1.0904	
			Yuan.....	.7374	The Yuan silver dollar of 100 cents is the monetary unit of the Chinese Republic; it is equivalent to 0.644+ of the Haikwan tael.
		Dollar.....	Hongkong.....	.7401

MONETARY LEGISLATION.

[PUBLIC—No. 199—66TH CONGRESS.]

[H. R. 12460.]

AN ACT To authorize the coinage of 50-cent pieces in commemoration of the one hundredth anniversary of the admission of the State of Maine into the Union.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, as soon as practicable, and in commemoration of the one hundredth anniversary of the admission of the State of Maine into the Union as a State, there shall be coined at the mints of the United States silver 50-cent pieces to the number of one hundred thousand, such 50-cent pieces to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, and said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

SEC. 2. That all laws now in force relating to the subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material, and for the transportation, distribution, and redemption of the coins, for the prevention of debasement or counterfeiting, for security of the coin, or for any other purpose, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided,* That the Government shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

Approved, May 10, 1920.

[PUBLIC—No. 200—66TH CONGRESS.]

[H. R. 12824.]

AN ACT To authorize the coinage of 50-cent pieces in commemoration of the one hundredth anniversary of the admission of the State of Alabama into the Union.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That as soon as practicable, and in commemoration of the one hundredth anniversary of the admission of the State of Alabama into the Union as a State, there shall be coined at the mints of the United States silver 50-cent pieces to the number of one hundred thousand, such 50-cent pieces to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, and said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

SEC. 2. That all laws now in force relating to the subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material, and for the transportation, distribution, and redemption of the coins, for the prevention of debasement or counterfeiting, for security of the coin, or for any other purpose, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the Government shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

Approved, May 10, 1920.

[PUBLIC—No. 203—66TH CONGRESS.]

[H. R. 13227.]

AN ACT To authorize the coinage of 50-cent pieces in commemoration of the three hundredth anniversary of the landing of the Pilgrims.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in commemoration of the three hundredth anniversary of the landing of the Pilgrims there shall be coined at the mints of the United States silver 50-cent pieces to the number of three hundred thousand, such 50-cent pieces to be of the standard troy weight, composition, diameter, device, and design as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, which said 50-cent pieces shall be legal tender in any payment to the amount of their face value.

SEC. 2. That all laws now in force relating to the subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material and for the transportation, distribution, and redemption of the coins, for the prevention of debasement or counterfeiting, for security of the coin, or for any other purposes, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the United States shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

Approved, May 12, 1920.

FOREIGN AND WORLD MONETARY STATISTICS.

The statistics of foreign countries on production, import, and export of gold and silver, coinage and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies, in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics. Where

data, other than from the interrogatory replies, are published, the source of the information is stated.

Incomplete tables for 1919 are printed, the tables following the other foreign data herewith.

NORTH AMERICA.

CANADA.

PRODUCTION OF GOLD AND SILVER FOR 1917, 1918, AND 1919.

[Consul General John G. Foster, Ottawa, Mar. 11, in Commerce Reports, Apr. 15, 1920.]

Year.	Gold.		Silver.

GOVERNMENT AUTHORIZES PURCHASE OF GOLD.

[From the Commercial and Financial Chronicle, New York, Aug. 16, 1919.]

An important statement was made during the week by Basil P. Blackett, of the British treasury, to the effect that the secretary of state for India announced that on and after Tuesday, August 12, and until further notice, the deputy master of the Ottawa branch of the royal mint has been authorized to sell immediate telegraphic transfers on India without limit of amount in exchange for gold tendered at the Ottawa mint at the rate of 1 rupee for 10.3585 grains of fine gold. The reason for this action is found in the increased value of the Indian rupee in pounds sterling, caused by the anti-British Hindoo contingents, largely Bengalese, who are using the silver rupee as a political weapon and refusing to accept rupee notes or sterling credits in commercial transactions, thus causing embarrassment to the British authorities, who find it difficult to either purchase silver at present exorbitant quotations or overcome the oriental demand for the metal, to which they are most accustomed by ages of usage and tradition. In addition to being an official recognition of the intrinsic worth of the silver content of the rupee, the fixing of the new level is an attempt on the part of Great Britain to settle Indian balances in gold instead of silver, and should, it is argued, result in the elimination of India as a purchasing factor in the silver markets and a consequent reduction of the world demand for silver.

LESS SILVER IN SILVER COINS.

[From the Monetary Times, Toronto, Canada, Jan. 30, 1920.]

According to an order in council passed recently, the silver content in Canadian silver coins is greatly reduced. On and after January 1, 1920, the standard for silver

coins of the currency of Canada shall be that in 1,000 parts by weight 800 shall be of fine silver and 200 of alloy. The former standard was 925 parts of fine silver and 75 of alloy. The minister of finance at Ottawa has announced that this will bring Canadian coinage to the same level as that of many other countries and would check any melting of silver coins for the sake of the silver.

CANADA'S CURRENCY SITUATION.

[From Greenshields & Co.'s Review, quoted by the Monetary Times, Toronto, Canada, Apr. 30, 1920.]

Items.	June, 1914.			Dec. 31, 1918.		
	Notes.	Gold.	Per cent of gold.	Notes.	Gold.	Per cent of gold.
Dominion Government.....	\$114,182,100	\$92,663,575	81.5	\$327,391,480	\$115,935,670	35.4
Chartered banks (net).....	96,588,029	46,608,956	48.3	102,101,117	87,815,616	86.0
Total	210,770,129	139,272,531	66.1	429,492,597	203,751,286	47.4

In respect to Dominion notes, therefore, this quite clearly represents a considerable degree of inflation. With gold holdings only 23,000,000 larger than in June, 1914, the amount of Dominion notes outstanding had increased 213,000,000. The percentage of gold cover declined from 81.5 per cent to 35.4 per cent. But allowing for the fact that the Dominion notes in the central gold reserve canceled in effect so much of the bank paper outstanding, the net circulation of the banks had increased less than 6,000,000, while their gold holdings had increased 41,000,000. In the aggregate, the net amount of paper money outstanding had a gold backing of 47.4 per cent. By September, 1919, the ratio of gold to notes had further recovered to 53.1 per cent.

NOTE.—Dominion notes may be held in the central gold reserve as cover, dollar for dollar, for bank notes outstanding. The figures here given for bank notes are net, not including those backed by Dominion notes. The "gold" reported as in chartered banks includes subsidiary coin.

MEXICO.

PRODUCTION OF GOLD AND SILVER, 1916-1919.

[From Journal of the American Chamber of Commerce of Mexico, Mexico City, in Commerce Reports, Aug. 20, 1920.]

CLOSING OF 60 PER CENT OF SILVER MINES.

[From the Commercial and Financial Chronicle, New York, Nov. 15, 1919.]

Washington press dispatches November 11 said:

"The Department of Commerce announces that leading mining men of Mexico state that almost 60 per cent of the silver mines in Mexico are closed, and that this means a big loss, in view of the high price of silver and the fact that Mexico is one of the largest producers."

RESTRICTIONS ON SILVER EXPORTS.

[From the Commercial and Financial Chronicle, New York, Nov. 15, 1919.]

With regard to the limit on exports of silver by Mexico, the New York Evening Post of November 12 printed the following advices from Mexico City:

"Strict limitations upon silver exportation from Mexico were placed upon producing companies to-day by an order from the Treasury Department directing that 50 per cent of all bullion be sold to the Government. In no case will the companies be allowed to export more than 50 per cent of their production. The order resulted from the shortage of silver coins, which, because of their high silver content, are being hoarded and sold for bullion."

"The Secretary of the Treasury, Louis Cabrera, has announced the Government is prepared to make immediate improvements in the mint here in order to increase the output."

"Mexico City has been experiencing a change shortage for several weeks, virtually all merchants refusing to accept gold for small purchases. Money changers demand from 4 to 7 per cent for exchange. The Government several days ago started coinage with less silver content, but the output is unable to meet the demand."

NEW SILVER AND COPPER COINS.

[From Bulletin of the Pan American Union, December, 1919.]

On October 27 last the President of the Republic issued a decree concerning new silver and copper coins. This decree provides that the new silver coins of the denominations of 1 peso, 50 and 20 centavos, shall have a fineness of 720 milésimos of silver and 280 milésimos of copper, and shall be considered merely as fractions of the gold coins. The new copper coin shall have a value of 10 centavos, a weight of 12 grams, and a composition of 95 per cent copper, 2.5 per cent tin, and 2.5 per cent zinc. These coins are restricted legal tender, and their receipt is only obligatory in a single payment of not more than 20 pesos for the silver coins, and 2 peso for the copper coin. Any person may present any amount of these fractional silver and copper coins to the offices of the treasury for conversion into gold coin, provided the exchange is solicited in amounts of 20 or more pesos. The new coins will be received by the State in unlimited quantities in the payment of taxes on a par with gold. The silver coins of the denominations of 1 peso, 50, 20, and 10 centavos, issued in accordance with the law of November 13, 1918, shall continue to have the same legal tender power as was given them under that law while, in the opinion of the President, the conditions for the exchange of fractional coin may so require. The laws of March 25, October 31, and November 13, 1918, continue in force in so far as they do not conflict with the provisions of the present law.

MAZATLAN—PRODUCTION OF GOLD AFFECTED BY INCREASED VALUE OF SILVER.

[Consul W. E. Chapman, in Supplement to Commerce Reports, Oct. 30, 1919.]

Gold mines have been especially affected by abnormal conditions because in the increase of the value of silver there was reflected a comparative decrease in the purchasing power of gold. Toward the end of the year silver money almost disappeared from this district owing to its high value, and gold coin became plentiful. Everyone had gold but silver could not be had in exchange except for a premium of 8 or 9 per cent. The high price of this metal during the year gave the silver mines an advantage over all other mines.

MATAMOROS—ADOPTION OF GOLD STANDARD—EXCHANGE.

[Consul G. R. Willson, in Supplement to Commerce Reports, Oct. 30, 1919.]

The adoption of the gold standard in Mexico has done much to restore confidence and place business upon a firmer basis. The old Mexican peso and half-peso coins, being worth more than their face value as bullion, rapidly disappeared from circulation during the year, and smaller change also became scarce. This condition has been

relieved by the coinage of smaller pesos and half pesos, in which the bullion value is reduced nearly 50 per cent. A new gold coin, the 2.5-peso piece, is also useful in this respect.

United States currency reached its lowest mark in October, when 58 cents was required to buy 1 peso in Mexican gold. In the latter part of November the United States permitted the exportation of flour and sugar to Mexico, and large shipments of these commodities followed. The resulting increase in the demand for United States currency with which to make payments soon caused a corresponding rise in its value, and at the close of the year Mexican gold was quoted at 52 cents here. This district was without banking facilities in Mexico in 1918; however, all the leading merchants carry accounts in banks in Brownsville, Tex.

ACAPULCO—EXCHANGE.

[Consul John A. Gamon, in Supplement to Commerce Reports, Oct. 25, 1919.]

Exchange on the United States fluctuated during the year between the following extremes: One Mexican peso for \$0.54 United States currency, minimum; 1 Mexican peso for \$0.58 United States currency, maximum. United States gold dollars remained at 2 for 1 throughout the year. United States paper money did not circulate. A shortage of silver coins seriously hampered small business transactions, particularly in the retail trade.

MONTEREY—EXCHANGE.

[Vice Consul Thomas Dickinson, in Supplement to Commerce Reports, Oct. 30, 1919.]

There was considerable fluctuation in exchange during the year (1918), the minimum being 52 cents United States currency to 1 peso, Mexican silver, the maximum, 60 cents to 1 peso, Mexican silver.

FRONTERA—EXCHANGE.

[Consul Thomas D. Bowman, in Supplement to Commerce Reports, Oct. 25, 1919.]

Exchange on the United States fluctuated during the year (1918) between the following extremes: One Mexican peso for \$0.54 United States currency, minimum; 1 Mexican peso for \$0.58 United States currency, maximum. United States gold dollars remained at 2 for 1 throughout the year. United States paper money did not circulate. A shortage of silver coins seriously hampered small business transactions, particularly in the retail trade.

VERA CRUZ—EXCHANGE.

[Consul Francis R. Stewart, in Supplement to Commerce Reports, Oct. 25, 1919.]

American gold coin exchanges here at the rate of 1 dollar for 2 pesos, while New York drafts have sold at rates varying from 52 to 54 cents for 1 peso.

MUCH PAPER MONEY DESTROYED.

[From the Numismatist, August, 1920.]

According to *La Revista Mexicana*, the Mexican Government has issued a statement of the status of the only remaining paper currency, known as the "Infalsificables," which was issued in 1916 at a par value of 20 cents Mexican or 10 cents gold per dollar. This paper or any other has not been in circulation since specie payments were resumed in the winter of 1916-17, since which time nothing but gold, silver, and copper coins has been in use. In order to retire the paper entirely the Treasury Department decreed a surtax in the paper named on all imports; that is, those paying duties in Mexican gold were also obliged to pay the same amount in "Infalsificables." At the time this tax was decreed the paper was worth practically nothing, and for a long time could be bought in the market at a fraction of a cent on the dollar. As fast as the paper was received by the Government it was destroyed, and as a result the price began to rise, until now it is quoted at 7½ to nearly 8 cents on the dollar.

The status of this paper, as regards the amount issued, the amount destroyed, and the total outstanding is given by the Treasury Department, as follows:

Printed by the American Bank Note Co.....	\$450,000,000
Bills of \$1 and \$2 printed in Mexico.....	65,000,000
Total amount issued.....	515,000,000
Burned by the Monetary Commission up to June 30, 1919.....	348,944,168
Burned since July 1, 1919.....	48,175,130
Total amount outstanding.....	117,880,702

There has, naturally, been a large amount of this paper destroyed in one way or another, and it is to be doubted if so much as a hundred millions is still in existence. Various efforts have been made to induce the Government to abolish the surtax in paper, but without success, as it is desired to retire the entire issue, and this seems the only feasible method. Practically all of the holders of the paper obtained it for only a small fraction of its present value.

SHORTAGE OF SILVER COINS AUGMENTS BUSINESS DEPRESSION.

[From Consul Thomas D. Bowman, Frontera, Tabasco, Mexico, May 17, 1919.]

The already acute business depression in this consular district has been augmented further by the shortage of silver currency, necessary in small retail operations. Merchants are obliged to refuse to make change for even a 5-peso coin, the smallest gold coin in circulation in this district. A premium of 10 per cent is paid in purchasing silver with gold, and only very limited quantities can be obtained at that price. No paper money circulates in this district, as in Yucatan and Campeche. Of American currency only gold coins circulate.

FINANCIAL CONDITIONS IN PIEDRAS NEGRAS.

[Vice Consul William P. Blocker, Feb. 3, 1919, in Supplement to Commerce Reports, Apr. 28, 1919.]

During the years of revolution the finances of Mexico reached a very low ebb. However, since the adoption of the old standard of money the financial condition has become greatly improved. Gold now is in general use all over the Republic, but there is still a great scarcity of small change, as silver has almost entirely disappeared, having been purchased by speculators for its bullion value. The Government is fast overcoming this difficulty by the coining of peso and half-peso pieces. The gold system is somewhat cumbersome, for as yet there are no large banks in operation in Mexico, and until they are opened again business will be most difficult for small concerns unable to do their business through banking institutions on the border, as is customary with the larger concerns throughout northern Mexico.

EXCHANGE AND CURRENCY SITUATION.

Commercial Attaché Edward F. Feely, Mexico City, Oct. 18, 1919, in Commerce Reports, Nov. 24, 1919.]

During September and the first part of October exchange on New York showed but slight fluctuations and averaged 48 to 49 cents American money per Mexican peso, with a small demand. The "Infalsificable" paper money, used in part payment of import duties, has remained around 7½ centavos Mexican per peso. This paper money is gradually decreasing in supply since it is destroyed by the Government as fast as it is turned in in payment of duties and is thereby retired from circulation. Old Mexican bank notes (especially those of the Banco Nacional and the Banco de Londres y Mejico) have been traded in to some extent because of the impression in some quarters that banks in good condition financially might eventually be allowed to renew operations. Prices for these bank bills ruled at about 63 per cent of the face value. Because of the considerable increase in the price of silver, fractional currency is getting scarce and the mining and industrial companies are finding it difficult to obtain it for their pay rolls. This situation is also a hindrance to the retail trade. As it would be impossible to obtain relief in time by reducing the amount of silver in the 1-peso and 50-centavo coins, it has been suggested that a 2-peso gold coin be issued, as already provided by law, together with a 10-centavo copper piece.

SHORTAGE OF COIN IN CIRCULATION GREAT HINDRANCE TO BUSINESS.

[The Washington Sunday Star, Jan. 5, 1919.]

MEXICO CITY, January 4.—Infinite annoyance to every resident of Mexico City and an appreciable loss to business houses have resulted from the virtual disappearance from circulation of silver coins. These comprise half-peso pieces and those of 20 and 10 centavos. The constantly increasing price of silver has given speculators a chance to make enormous profits by cornering the silver coins for sale as bullion. When the shortage became noticeable the capital press printed stories on the disappearance of the coins. An immediate rush to hoard what coins remained then began.

Persons without change are unable to make small purchases, as many merchants will decline to sell if they are forced to give silver change for a 10 or 20 peso gold piece. The Government, to relieve the situation, is rushing preparations to mint a new gold coin worth 2½ pesos.

NEW GOLD COINS PUT IN CIRCULATION.

[From Bulletin of the Pan American Union, January, 1920.]

On the 1st of November the 2-peso gold coins were put in circulation in accordance with the measures of the decree executed recently to reform the monetary system.

According to the Bulletin of the Pan American Union, March, 1920, the silver exports of Mexico to the United States for 1918 amounted to 86,913,618 pesos (\$43,471,809).

MONETARY SITUATION AT THE END OF DECEMBER, 1919.

[From the Washington Evening Star, Jan. 23, 1920.]

Dr. Enrique M. Sobral, of the Mexican déléation, made the following statement before the Pan American Congress at Washington:

"Five years ago our paper currency was practically worthless, but to-day Mexico is on a gold basis, and is practically the only country using gold currency, not even having bank notes. Our stock of gold amounts to \$100,000,000, and in the last three years the paper system has been eliminated."

NOTES IN CIRCULATION.

[From L'Economiste Européen, Paris, Jan. 2, 1920.]

According to the London Financial Times, the notes in circulation in Mexico on December 31, 1918, amounted to 129,984,148 pesos (\$64,797,098).

WANT OF RELIABLE PAPER CURRENCY.

[From the Bankers' Magazine, London, September, 1919, p. 283.]

* * * The want of a really reliable paper currency is undoubtedly felt, and business is believed to be greatly hampered by the insufficient supply of the metallic currency, despite the really large output of the mint. The reason for this stringency is probably that the money is hoarded and does not go into circulation through the banks to any appreciable extent, because those who possess it prefer to run the risk of keeping it in their own hands rather than place it in a bank where it is liable to be confiscated at any moment. * * * It may be mentioned here that the silver coins of all denominations now being issued by the mint are not much more than half the weight of the former coins.

BRITISH HONDURAS.

The amount of silver coin withdrawn from monetary use during the year ended December 31, 1919, to be used for industrial purposes, was \$757.

The amount of United States gold coin imported into British Honduras during the year ended December 31, 1919, was \$15,000.

CURRENCY AND EXCHANGE.

[Consul Henry D. Baker, Port of Spain, in Supplement to Commerce Reports, Mar. 11, 1920.]

Trinidad has a dual system of currency, the units being the dollar, which circulates locally on a parity with the American dollar, and the English pound sterling, which has a value of \$4.80 in local currency, the shilling having a value of 24 cents. Most local commercial transactions are in terms of dollar currency, but customs duties and Government accounts are figured on the basis of pounds, shillings, and pence. Ordinarily exchange on New York does not vary more than 1 per cent either way. Recently, however, in sympathy with the pound sterling (Trinidad currency \$4.80 being legal tender for £1 sterling) the value of local currency has declined seriously with relation to American currency, and at present (October, 1919), the American dollar is at a premium of 13 cents as compared with the Trinidad dollar.

LAWS AFFECTING THE CURRENCY.

The constitutional President of the Republic of Costa Rica, with the approval of Congress, decrees as follows:

1. The International Bank of Costa Rica is hereby authorized to issue 15,000,000 colones of notes which shall have the same legal-tender quality as notes already in circulation.

2. Of the total amount of the issue, 10,000,000 colones, at the most, shall be placed at the disposal of the Government, and the remaining 5,000,000 colones shall be distributed as follows: 2,500,000 colones to increase the emergency and loan funds of the International Bank of Costa Rica; 1,500,000 colones to be used as farmers' loan fund, and 1,000,000 colones to improve or build roads in the country.

3. Loans made by the bank from these funds shall draw 8 per cent interest and shall be amortized at the rate of 4 per cent annually.

5. This issue shall be backed by revenues from post and telegraphs. Beginning with June 30, 1920, the Government shall turn over to the International Bank all such revenues on the 15th of each month, and the bank shall withdraw from circulation a corresponding amount of the notes hereby authorized and burn them.

6. From the date of publication of the present law the Government shall establish a deposit in United States gold or in drafts on the United States Government in the International Bank of Costa Rica. This deposit shall be used as a revolving credit and shall be used exclusively by the bank to sell bills to commercial houses and to private individuals at a rate of exchange not to exceed 500 per cent.

8. This law abrogates all previous laws and especially that of July 16, 1917.

Done at the Presidential House, San Jose, June 27, 1919.

NOTE.—It is reported that this law may be abrogated by the present Constitutional Congress (July, 1920).

ISSUE OF BANK BILLS.

[From Bulletin of the Pan American Union, February, 1919.]

The National Bank of Costa Rica has been authorized to issue 8,998 bank bills of the denomination of 100 colones each (colon=\$0.4653).

IMPORTS OF SILVER AUTHORIZED.

[From Bulletin of the Pan American Union, March, 1920.]

An executive decree of December 27, 1919, permits the free importation of silver in bars, ingots, or any other unmanufactured form, and in coin having a fineness of not less than that established by law for national silver coin. Imports of coin, either foreign or national, of a lower fineness are prohibited.

SILVER IMPORTS AND EXPORTS—EXCHANGE RATES.

[Consul Benjamin F. Chase, San Jose, in Commerce Reports, July 10, 1920.]

Coined silver money imported in 1919 from the United States was valued at 36,550 colones; exports, also to United States, were valued at 100,000 colones. No silver money was in circulation in 1918 and 1919.

The average rate of exchange for 1918 was 4.4 colones to 1 American dollar; in 1919, 3.9 colones to 1 dollar. The highest average was, for April 1919, 4.4 colones and the lowest, for December, 2.8 colones per dollar.

CUBA.

United States notes.....	2,500,000	10,000,000	12,500,000

¹ It is believed that a fair quantity of gold coin is held by individuals, but there is no way of getting at even an approximate estimate.

The actual currency of the country is United States money. Gold does not circulate. Such small amounts as are held are in the hands of ignorant peasants who buy it and are always willing to pay a small premium.

The premium on gold for 1919 was: Highest, 2 per cent; lowest, one-half per cent; average, 1 per cent.

The imports of silver coin from the United States during the calendar year 1919 amounted to \$500,000.

The exports during the year were: Gold coin, to Venezuela, \$30,000; domestic silver coins to the United States, where they were melted, \$85,000.

CURRENCY OF THE COUNTRY.

[By Consul Clement S. Edwards, Santo Domingo, in Supplement to Commerce Reports, Dec. 11, 1918.]

The United States gold dollar was in 1897 adopted as the standard of value of the Dominican Republic. United States gold and silver coins and paper currency are in circulation and constitute the principal medium of exchange. In addition, there is a limited amount of Dominican coinage in circulation, including the peso and some fractional currency which pass current at the rate of five to one. There are no Dominican gold coins or paper currency in circulation.

DUTCH WEST INDIES—CURAÇAO.

The amount of domestic silver coin withdrawn from monetary use during the year ended December 31, 1919, for recoinage was 100,000 guilders (\$40,200). No figure can be given about withdrawal for industrial use.

Stock of gold and silver, also paper money used for monetary purposes on December 31, 1919: Data available only concerning the "Curaçaosche Bank." This bank had a stock of gold coin of 202,435 guilders (\$81,379); silver, 305,247 guilders (\$122,709); notes issued, 91,017 guilders (\$36,589). The amount of paper money in circulation was 1,201,419 guilders (\$482,970).

Premium on gold: Highest 12 per cent, lowest, 2 per cent, on American gold; highest 8 per cent, lowest 3 per cent, on English gold. Premium on American notes, 3 per cent.

By order No. 66 of 1919, the stock capital of the Curaçaosche Bank was increased to 1,500,000 guilders.

The import of Dutch silver coin from Holland during the year 1919 was 150,000 guilders (\$60,300).

FRENCH WEST INDIES—MARTINIQUE.**REDEMPTION OF COLONIAL BANK NOTES.**[From *L'Economiste Européen*, Paris, July 25, 1919, p. 58.]

The Journal Officiel of July 17 publishes a law approving the decree of August 22, 1914, authorizing the governors of Martinique, Guadeloupe, French Guiana, and The Reunion, to release the colonial banks from their obligation to redeem their notes in specie and to fix by law the limit of their issues and the proportion of note circulation to metallic reserve.

GUATEMALA.**RATE OF EXCHANGE.**

[Vice Consul Henry S. Waterman, Guatemala City, Oct. 18, in Commerce Reports, Nov. 21, 1919.]

Exchange continued steady during September, although the beginning of October sees a further drop. The average was 25.26 pesos to \$1 (United States) gold, as against an average in September, 1918, of 37.50 pesos to \$1. The highest rate was on September 2, 25.90 pesos to \$1, and the lowest on September 30, 24.90 pesos to \$1.

LAWS AFFECTING THE CURRENCY.

ARTICLE 1. The agreement between the Government and the National Bank of the Republic of Haiti, signed at Port-au-Prince, April 12, 1919, to retire the present paper currency and to issue notes of the National Bank of Haiti, is hereby sanctioned.

ART. 2. Until the economic conditions of the country will make it possible to establish a national gold currency, the bank notes shall be accepted and redeemed at the rate of five gourdes to the dollar and vice versa.

ART. 4. All previous laws to the contrary are hereby abrogated.

Done at Port-au-Prince, May 2, 1919.

AGREEMENT BETWEEN THE GOVERNMENT OF THE REPUBLIC OF HAITI AND THE NATIONAL BANK OF HAITI, REGULATING THE MONETARY REFORM.

ARTICLE 1. The bank shall transfer to Haiti and keep on deposit to the credit of an account which shall be known as "The redemption fund," the balance of the 10,000,000 francs of the loan of 1910, including the \$500,000 transferred to New York in December, 1914, increased by the 2 per cent interest annually on that amount from December, 1914, to December 31, 1918. It shall also enter to the credit of the said account of all other balances or increases due or assigned to the monetary reform or to the redemption funds on December 31, 1918.

These funds, on December 31, 1918, consisted of the following:

(a) Monetary reform.....	\$1, 590, 125. 28
(b) Redemption guarantee.....	139, 539. 61

Making a total of \$1,735,664.89 legal money of the United States, to be placed on the credit account of the redemption funds.

ART. 2. It is, however, understood that, with the approval of the Government, the bank may keep a sum not to exceed one-half the amount appearing on the credit account of the redemption funds, on deposit in one of the national banks of New York, at the option of the Government of Haiti and to its credit; these funds to be used according to provisions made below. In that case, the Government of Haiti will receive the interest accruing from said deposits.

ART. 3. As soon as the bank fully accepts the provisions of articles 1 and 2, as to what it agrees to do upon receipt of its temporary notes, referred to below, the Government promises to begin the withdrawal of the paper currency now in circulation which, according to official statement, amount to—

	Gourdes
(1) Notes of 1 and 2 gourdes (issues of 1903-4-5, substituted for 1892 issue)...	8, 572, 147
(2) Notes of 5 gourdes (issue of 1908).....	305, 825
Total.....	8, 877, 972

This withdrawal will be announced in the *Moniteur* and the Government will proceed therewith as promptly as possible. The withdrawal shall be completed within one year from the date of announcement of the issue of the permanent bank notes, to which reference is made below.

The holder of the aforesaid paper currency shall be entitled to redemption of same in legal money of the United States, at the rate of 5 gourdes to 1 dollar, or, if he chooses, he may exchange them at par for the new bank notes referred to below.

Paper currency not presented for redemption within the stated period shall become demonetized and valueless without any further formality.

ART. 4. The bank shall have charge of the redemption operations referred to under article 3. It shall debit the account of the redemption fund with the amount of paper currency withdrawn from circulation at the rate of 5 gourdes to 1 dollar, plus the cost of insurance and transportation from the provinces to Port au Prince, and vice versa.

ART. 8. The bank agrees to redeem at sight its notes in lawful money of the United States at the rate of 5 gourdes to 1 dollar.

ART. 9. The bank shall hold at all times in its safes in Haiti a cash reserve destined exclusively for the redemption of its notes in circulation. This cash reserve shall consist of lawful money of the United States of America and be equal to, at the rate of five to one, at least one-third the total amount of bank notes in circulation. It is understood, however, that a part of this reserve, never to exceed one-half, may be held in a New York national bank as a sight deposit, the choice of the bank to be approved by the Government of Haiti.

The difference between the cash reserve and the total amount of bank notes in circulation, at the rate of 5 gourdes to the dollar, shall be at all times represented by commercial bills bearing two good signatures and maturing within four months at the most.

ART. 11. The bank agrees especially that the total amount of its notes in circulation shall never exceed three times the amount of its paid-up capital in lawful money of the United States.

If greater circulation of bank notes in gourdes is required for the country's trade, the bank shall issue the necessary amount either by increasing its capital proportionally or by securing a special permission from the Government.

ART. 13. The bank agrees to pay the Government 1 per cent per annum on the daily paper circulation in excess of 10,000,000 gourdes.

Benefits accruing from nonpresentation of certain banks notes at the final redemption shall be divided equally between the Government and the bank, after deducting all expenses connected with the said redemption.

ART. 17. Until the permanent bank notes authorized by article 6 above (an issue of 20,000,000 gourdes) shall be available, the bank may issue temporary notes to an amount not to exceed 7,000,000 gourdes, which in every respect shall be subject to the same conditions as those provided in the present agreement for the permanent notes.

It is understood that these temporary notes shall be withdrawn from circulation within a period not less than two years and not more than three.

Done and signed at Port au Prince, April 12, 1919.

PROVISIONAL ISSUE OF BANK NOTES.

[From Bulletin of the Pan American Union, January, 1920.]

A law has been promulgated which authorizes the Banque Nationale to put in circulation 5,000,000 provisional 1 and 2 gourde bank notes. According to the agreement between the Government and the bank authorities, an additional 3,000,000 of notes may be issued and put in circulation if necessary. These provisional bank notes will be withdrawn as soon as the permanent notes become available.

HONDURAS—TEGUCIGALPA.

The domestic silver coin withdrawn from monetary use during the year ended December 31, 1919, was \$600 (United States currency).

The amount of gold coin imported into Honduras during the same year was \$10,000 (United States currency).

Total.....	1,495,950	492,886	267,524

MINOR COINAGE RECEIVED.

[From Bulletin of the Pan American Union, May, 1919.]

The National Bank of Nicaragua recently received 29 barrels of coins of 5 centavos and 1½ centavos, copper pieces. With this amount of regular fractional currency it is hoped to facilitate exchange in sales of small values.

FINANCIAL SITUATION.

[From Bulletin of the Pan American Union, March, 1920.]

The President, in his message read before congress December 15, 1919, showed the improvement in the economic situation of the country and of the internal revenue. On October 31, 1919, there were 3,559,100 cordobas (cordoba equals \$1) in circulation, as against 2,960,012 cordobas in 1918; and the reserve fund deposited in New York in 1919 was \$1,875,120, as against \$1,300,000 in 1918, showing an increase of 500,088 cordobas in circulation and \$575,120 in the gold reserve. More than 50 per cent of the money in circulation has been backed by gold, which is more than required by the present monetary law and is a percentage large enough to bring the national money up to par with American gold. Bills of exchange on the United States are being quoted with a premium which represents the banking commission only. The sound financial condition of the country is shown again in the fact that the guaranteed bonds of 1918, which constituted the internal debt of the nation, were quoted in 1918 at 35 per cent and at the close of 1919 were quoted at 60 per cent of the face value.

EXPORT OF GOLD AND SILVER.

[From the Engineering and Mining Journal, Apr. 3, 1920.]

The export of gold and silver from Nicaragua in recent years is as follows:

Year.	Gold.	Silver.
1916.....		
1917.....	\$938,943	\$9,330
1918.....	925,628	135,469
	1,245,484	227,623

The total production of gold is slightly larger than the amount shown in export figures, as some gold, principally placer, is used locally for the manufacture of jewelry. The export of gold from eastern Nicaragua was in 1917, \$429,072; in 1918, \$495,761; in 1919, \$680,000 (estimated).

PANAMA.

No gold or silver coinage was officially withdrawn during the year ended December 31, 1919.

The estimated quantity used in the industrial arts during the year ended December 31, 1919, was: Gold, balboa 100,000 (\$100,000); silver, balboa 200,000 (\$200,000).

The production of gold during the year 1919 was small; no definite figures available.

Stock of gold and silver used for monetary purposes on Dec. 31, 1919.

Character of stock.	In banks.	Held abroad.
Gold coin.....	<i>Balboas.</i>	<i>Balboas.</i>
Silver coin.....	290,617	530,000
	290,000	
Total gold and silver.....	580,617	530,000

NOTE.—The above figures represent United States gold and silver coin. There are no notes of the country, and due to high price of silver practically no Panamanian coins remain in circulation.

The imports of silver coin from the United States during the year 1919 amounted to balboa 86,000, the exports thereto, balboa 4,457.

SALVADOR.

The amount of United States gold coin imported into Salvador during the year ended December 31, 1919, was \$4,499,550.

The production from deep mines during the year was gold 27,354 fine ounces (\$565,457); silver, 612,741 fine ounces, valued at \$686,803.

Stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1919.

Character of stock.	In banks.	Held abroad.	In circulation.	Total used for monetary purposes.
	<i>Colons.</i>	<i>Colons.</i>	<i>Colons.</i>	<i>Colons.</i>
Gold coin.....	9,500,081	320,200		9,820,081
Silver coin.....	1,190,823			1,190,823
Total gold and silver.....	10,690,904	320,000		11,010,904
United States equivalent.....	\$5,345,452	\$160,000		\$5,505,452
Notes of banks of issue.....	2,964,152		14,635,848	17,600,000
United States equivalent.....	\$1,982,076		\$7,317,924	\$8,800,000

Gold was not at a premium. The currency of the country was at par; 2 colons equals 1 dollar.

LAWS AFFECTING THE CURRENCY.

MONETARY UNIT.

[From the Diario Oficial, San Salvador, Sept. 12, 1919.]

ARTICLE 1. The monetary unit of the Republic of Salvador shall be the colon, divided into 100 centavos and represented by 0.836 gram (12.90115 grains) of gold, 900 thousandths fine. The 1, 3, and 5 centavo nickel pieces, and the 5, 10, and 20 centavo silver pieces, now in circulation, shall be used as subsidiary coin.

ART. 2. The banks of the country shall proceed to replace the silver notes by gold notes, in accordance with the new monetary unit; until this is done, however, the present bank notes shall circulate at the rate of 1 peso to 1 colon.

ART. 3. The new standard being gold, the present national or foreign silver currency is hereby declared demonetized.

ART. 4. The obligation of the banks to redeem their notes in silver coin, shall henceforth be met by paying in gold coin at the fixed rate of 1 gold colon to 1 silver peso.

ART. 5. The banks shall proceed within three months from the date this law goes into effect, and by order of the executive power, to replace the silver stock in their vaults by an equal amount of United States gold coin which shall be previously imported for the purpose.

The balance resulting from the sale of the silver, after deducting 50 centavos gold for each silver peso of the metallic cover, shall be distributed a half to the Government and a half to the banks.

ART. 7. The export of silver coin shall be free, provided that the exporter guarantee in advance to the Treasury Department imports of United States gold coin equivalent to the net proceeds realized from the sale of the silver.

SAN SALVADOR, *September 11, 1919.*

LAW MAKING UNITED STATES CURRENCY LEGAL TENDER.

ARTICLE 1. Gold coin of the United States of America is hereby declared legal tender.

ART. 2. American bank notes representing the dollar shall have free circulation in the Republic, and the banks established in the country shall be obliged to accept them in payment of their outstanding accounts and in payment of bills of exchange. This obligation shall not deprive the banks of the privilege to charge the usual commission for the placing of funds.

ART. 3. For the purpose of the above provisions the United States dollar shall be equal to 2 colons in national-bank notes.

ART. 4. Obligations contracted in foreign money within or without the Republic, but payable within the Republic, shall be settled by delivering the equivalent in United States gold or in colons at the rate of exchange current in the place and at the time of payment.

ART. 5. If upon the removal of the moratorium which the bank notes are now enjoying, the different national coins should not yet have been issued, the banks may then meet their obligations by redeeming their notes with United States gold coin at the rate of 2 colones to 1 dollar.

SAN SALVADOR, *September 11, 1919.*

Imports of gold coin from the United States during the calendar year 1919 amounted to \$4,499,550.

Exports into the United States during the same period were: Gold bullion, \$565,465; silver coin, \$2,700,967, silver bullion, \$686,803.

FINANCIAL SITUATION OF BANKS OF ISSUE.

[From Bulletin of the Pan American Union, April, 1920.]

According to a table prepared by the superior tribunal of accounts on the issue, circulation, and coin guarantee of Salvadorean banks, the paid-up capital in colons (colon=\$0.50), the authorized issue, bills in circulation, and cash on hand of the three banks of the country on December 31, 1919, was as follows: Banco Salvadoreño: Paid-up capital, 3,500,000 colons; authorized issue, 7,000,000 colons; bills in circulation, 6,214,229 colons; specie on hand, 5,091,870 colons; excess over guarantee required by law, 38 per cent. Banco Occidental: Paid-up capital, 4,000,000 colons; authorized issue, 8,000,000 colons; bills in circulation, 6,661,987 colons; specie on hand, 4,450,609 colons; excess over legal guarantee, 20.5 per cent. Banco Agrícola Comercial: Paid-up capital, 1,300,000 colons; authorized issue, 2,600,000 colons; bills in circulation, 1,759,632 colons; specie on hand, 1,475,404 colons; excess over legal guarantee, 34.4 per cent. These three banks have a combined paid-up capital of 8,800,000 colons, an authorized issue of 17,600,000 colons; bills in circulation, 14,635,848 colons; specie on hand, 11,017,883; excess over legal guarantee, 31.3 per cent. The legal coinage guarantee is 40 per cent of the bills in circulation and 20 per cent on sight deposits and accounts current.

ISSUE OF BANK BILLS.

[From Bulletin of the Pan American Union, February, 1919.]

The executive power has authorized the Salvadorean Bank to increase its capital to 3,500,000 silver pesos (silver peso=\$0.7234), divided into shares of 100 pesos each, and to issue bank bills payable to bearer and redeemable in silver legal tender coin.

COMPARATIVE STATEMENT OF BANKS OF ISSUE.

[From a lecture delivered by the minister of finance and public credits, at the National University of Salvador, June 10, 1919, per Centro-America, Guatemala City, July-September, 1919.]

Year.	Metallic stock.	Note circulation.	Per cent.
	<i>Pesos.</i>	<i>Pesos.</i>	
Dec. 31, 1913.....	1,714,887	4,469,145	38.37
Dec. 31, 1914.....	3,664,938	6,062,601	60.45
Dec. 31, 1915.....	4,444,917	7,903,034	56.24
Dec. 31, 1916.....	5,520,942	9,611,975	57.43
Dec. 31, 1917.....	6,064,216	11,195,246	54.16
Dec. 31, 1918.....	6,622,877	14,183,616	46.69

NOTE.—During the period above quoted the monetary system of Salvador was on a silver basis; the Salvadorean peso contains 347.22 fine grains of silver as compared with 371.25 fine grains in the United States standard silver dollar. The market value of silver during this entire period was below the coining value of the metal, the average annual market value ranging from under 52 cents to over 98 cents per fine ounce, while the coining value, in the standard silver dollars of the United States, is over \$1.29 per fine ounce.

EXPORT OF GOLD AND SILVER.

[From Supplement to Commerce Reports, Mar. 17, 1920.]

Items.	1915	1916	1917	1918
Gold in bars.....	\$707,027	\$558,054	\$410,820	\$589,505
Gold and silver in bars and other forms.....	916,041	761,130	372,170	735,150
Silver in bars.....		26,314	14,421	13,125
Total gold and silver.....	1,623,068	1,345,498	797,411	1,337,780

[From Bulletin of the Pan American Union, February, 1920.]

Figures on the imports and exports of gold and silver in the first 11 months of 1919 show that through the port of La Libertad 538,000 pesos silver were exported and \$2,358,800 in coined gold were imported.

INCREASED COIN STOCK.

[From Bulletin of the Pan American Union, February, 1920.]

The treasury of the Republic has lately received a remittance of 110,000 pesos (peso equals \$0.50) in nickel coin of 5 and 1 centavo denominations which has been distributed by the administration of the public revenue to facilitate the business transactions of the whole country.

[From Bulletin of the Pan American Union, February, 1920.]

The following remittances of coined gold have lately arrived from the United States: \$500,000 for the Banco Agrícola Comercial, \$500,000 for the Banco Salvadoreño of San Salvador, and \$700,000 consigned to different individuals. The gold was ordered solely to increase the currency of the country and facilitate trade.

THE VIRGIN ISLANDS.

(Formerly Danish West Indies.)

CURRENCY MIXED.

[From the Commercial and Financial Chronicle, New York, Apr. 3, 1920.]

The monetary system in effect in the islands is that established by the Danish law of 1904 which made the monetary unit the gold franc. Each franc is divided into 100 bit and 5 bit equal to 1 cent. The value of 5 francs equals 1 West Indian dollar. The West Indian dollar, however, does not exist as coin nor is there any provision for its coinage. It is merely an expression used to denote the value of 5 francs. Although levied in dollars the customs duties are actually collected in francs.

The United States dollar and its fractional currency circulate freely in the island. Business men generally mark goods and make sales in United States currency. At the normal rate of exchange a United States dollar equals in value 5 francs, 20 bit, but the rate of exchange has fluctuated as a result of the war.

SOUTH AMERICA.

ARGENTINE.

GOLD STOCK AND NOTES IN CIRCULATION ON DECEMBER 31, 1919.

[From the Review of the River Plate, Apr. 16, 1920.]

The gold held by the Caja de Conversión December 31 last amounted to \$310,031,943 (Argentine gold pesos). The figure as at 14th instant is \$371,569,906. In addition Argentine legations hold a further sum in gold of \$78,996,805, which for fiduciary purposes is considered as forming an integral part of the Caja de Conversión gold stock. The paper money in circulation to-day is \$1,317,033,483 m/n as against \$1,177,174,475 m/n December 31, 1919.

MONETARY SITUATION.

[From the Economist, London, Sept. 13, 1919, p. 432.]

BUENOS AIRES, August 12, 1919.—Large quantities of gold have reached this market by almost every mail steamer from the United States since the peace treaty was signed, and have been added to the already enormous hoard in the Caja de Conversión. At one period after the United States entered the war the value of the American dollar stood at 93 centavos gold, a discount of just over 10 per cent; but large arrivals of the metal from New York have now sent the quotation to slightly over parity. To-day the stock of gold in the Caja and at the disposal of the Argentine legations abroad stands at \$383,798,430, against a circulation of paper, nickel, and copper of \$1,165,287,391 m/n (national money, 1=\$0.44).

ARGENTINE FINANCIAL CONDITIONS.

[Ambassador Frederic J. Stimson, Buenos Aires, Oct. 6, 1919, in Consular Reports, Dec. 2, 1919.]

EXCHANGE RATES.

The month of September, 1919, saw a favorable increase in the exchange value of the Argentine gold peso in pounds sterling. The peso was worth 54.75d. on September 30, as compared with 54.50d. August 30, its par equivalent being 47.7d. On Paris the normal rate for the gold peso is worth just 5 francs; it was at 7.68 francs on August 30 and 7.62 on September 30. The gold reserve of Argentina is said to be far greater in proportion to the amount of paper in circulation than in either England or France.

PAPER CIRCULATION AND GOLD RESERVE.

On December 31, 1918, according to La Unión, the external debt of Argentina amounted to 671,336,118 paper pesos (\$288,674,530, United States currency), and the internal debt totaled 642,791,606 paper pesos (\$276,400,390). The present circulation of Argentine paper amounts to 1,165,338,033 paper pesos, and the voting of all the credits now before the Congress would require, it is estimated, an increased issue of 885,670,819 paper pesos, bringing the total to 2,051,008,852 (equivalent to 902,444,395 gold pesos). Against this there is an actual specie reserve of \$383,820,713, Argentine gold.

ARGENTINE DEPOSIT IN UNITED STATES.

[From Bulletin of the Pan American Union, April, 1919.]

The Argentine Government has deposited in one of the Federal reserve banks of the United States the sum of \$2,917,800 or 6,872,745 Argentine pesos, representing the profit of the exchange by the transfer of £8,000,000 from England to the United States by way of France and Spain.

GOLD ON HAND IN THE CONVERSION BANK AND IN LEGATIONS.

[From the Bulletin of the Pan American Union, July, 1919.]

On April 30 last the coined gold on hand in the Conversion Bank amounted to 279,465,449 gold pesos (gold peso=\$0.9648), while gold on deposit in the legations of the Republic was 103,742,188 gold pesos, or a total of 383,207,637 gold pesos.

BOLIVIA.

BRAZIL.

The gold coinage executed during the year ended December 31, 1919, was 526 10-milreis pieces, or 5,260 milreis (\$2,874).

The domestic coin withdrawn from monetary use during the calendar year 1919 for medals was: Gold, 20 milreis (\$11); silver, 1,569 milreis (\$857). The foreign gold coin withdrawn during the year for the same purpose was 1,009 British pounds (\$4,910) and 5,200 French francs (\$1,004).

It is estimated that a very small quantity of gold and silver is used in industrial arts.

The imports of United States gold coin during the year amounted to \$525.

Stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1919.

Character of stock.	In Government treasuries.	In circulation.	Total used for monetary purposes.

REPORT OF THE DIRECTOR OF THE MINT.

METALLIC RESERVE FOR BRAZILIAN NOTE CIRCULATION.

[From *Moniteur des Interets Materiels*, Brussels, Nov. 30, 1919.]

A cablegram from Rio de Janeiro, dated November 22, states that the Brazilian Government is considering a proposition submitted by the minister of finance regarding the purchase of all the gold and silver in the country in order to create a reserve fund for the paper money in circulation.

COUNTRY'S FINANCIAL SITUATION.

[From the *Commercial and Financial Chronicle*, New York, Nov. 8, 1919.]

In his first address to congress on September 3, 1919, President Pessoa criticized the Government for incurring in the last five years a deficit of \$250,000,000 and the issue of loans to meet it, a step which aggravated the financial situation, disturbed economic conditions, and forced into circulation an unexpected amount (\$300,000,000) of paper money continually depreciating in value.

THE PROBLEM OF BRAZILIAN EXCHANGE.

[Commercial Attaché J. E. Philippi, Rio de Janeiro, Sept. 10, 1919, in *Commerce Reports*, Oct. 23, 1919.]

Two interesting statements relative to the future stability of Brazilian exchange have recently been made—one by Dr. Nuno Pinheiro, of the Committee for the Fiscalization of Banks and Exchange Operations, in an interview; and the other by former Minister of the Treasury Carlos, who is now chairman of the Senate Committee on appropriations, introducing the Budget Law of 1920.

Speaking of recent fluctuations of exchange, Dr. Pinheiro says that these oscillations are natural and inevitable and are never traceable to any single cause. At times they are due in large part to speculation, at others to the entrance of psychological factors—rumors and canards often causing stampedes in the exchange market. Dr. Pinheiro regards it as impossible to suppose that any action of the Government can successfully fix the exchange rate, and cites as proof the fact that at the first real test, under the influence of the war crisis, the Bank of Conversion, established by the Government for this purpose, failed to meet the emergency. The Government, to bring about a healthy condition for stable exchange, should establish monetary circulation in gold, since the present defective paper currency is very subject to fluctuations. But such a reform is the work of years, and should be begun during an era of prosperity. Dr. Pinheiro also recommends greater severity in the fiscalization of exchange operations as a salutary measure to curb unwarranted speculation. This measure, as applied in the past, has proved of great service to legitimate commerce without prejudicing free transactions in exchange operations.

With the foregoing opinions Dr. Antonio Carlos in his introduction to the budget law of 1920 is in substantial agreement, but his recommendations are more specific. After pointing out that the favorable position of Brazilian exchange during the war has been due to the excess of exports over imports, giving a trade balance averaging £14,000,000 (\$68,131,000) for each of the last three years, Dr. Carlos says that but for this circumstance the exchange market would certainly have felt the effects of the inflation of the inconvertible Brazilian paper currency.

NEED OF CONTROLLING SPECULATION.

Taking up the matter of exchange speculation he continues as follows:

"National interest requires the close following of exchange operations and the measures introduced by decree of July 19, 1918, are still in force, although in a very modified form. National interests demand that these measures [for the fiscalization of exchange] be maintained, although they need not be so rigorous since the cessation of war-time conditions. The complete elimination of fiscalization would be a grave error, because the weak condition of our money exposes us to the play of speculators in exchange; and no reasonable explanation could be given for relinquishing the control which has been more or less accomplished.

"It is imperative that speculation in exchange, with the conditions which have resulted therefrom, be eradicated in our country. Due to artificial stimulation of speculation, abrupt and frequent changes occur in the rates. That these changes are artificial can be proved by the fact that after the measures decreed on July 19, 1918, the rate became normal and has been maintained without great variations, because this decree considered such operations illegitimate.

"FUNCTIONS AND FAILURE OF THE BANK OF CONVERSION.

"The fight against speculation and the consequent oscillations in exchange rates have figured continuously in the program of all administrations and of our financiers, all of whom wisely consider this to be one of the strongest elements of national economy and national financial stability. The Bank of Conversion arose from these ideas and by its actions exchange was maintained for some years at fixed rates. The process employed by the Bank of Conversion was very simple, as it transformed the State into a purchaser of gold at a rate always somewhat higher than that which was really in force at the time. This had the inevitable effect of increasing its deposits and it operated normally until the first crisis, which came with the declaration of war, finished the Bank of Conversion, probably never to be reopened.

"The expectations of those who believe they will see this organization again operating would seem in vain. If, as is written in the decree establishing it, the base upon which the bank should operate is that of gold, it can operate only with difficulty so long as the metal is scarce; and after the war gold became a rare article, avariciously retained in the strong boxes of the banks or the treasury of the State. The very gold of the Bank of Conversion no longer exists. It was bought by our Treasury Department and passed on to the amortization bank, where it served as a base for all of our circulating medium. The notes of the Bank of Conversion no longer circulate and those that exist—little more than 20,000 contos (\$5,500,000)—must be acquired by the Government, whose immediate interest is to take them up.

"FISCALIZATION OF EXCHANGE NECESSARY.

"However, it is certain that the national interests are not consistent with the free expansion of exchange speculation; and as the Bank of Conversion no longer exists, it behooves us to institute a régime of fiscalization. Speculation in exchange has its traditional forms and the liquidations for differences and time contracts are in general characteristic operations. By making time operations difficult and prohibiting operations between banks, the decree of July 19, 1918, struck speculation in a vital point and, in fact, destroyed it."

Dr. Carlos then calls attention to the fact that even before the decree of July 19, 1918, the liquidation of differences in letters of exchange had been prohibited by law, but the execution of the law had been weak, in that the fiscalization of exchange was left in part to the Camara Syndical de Corretores. In order that this fiscalization should be placed in charge of the Treasury Department, Dr. Carlos recommends that the nomination of the president of the Camara Syndical be subject to the approval of the Minister of the Treasury. This would make the president of the Camara Syndical independent of the bankers, brokers, and speculators, and place him in a position to exercise a decisive influence against speculation.

FISCALIZATION OF FOREIGN BANKS AND BRANCHES RECOMMENDED.

Dr. Carlos places much of the blame for speculation upon foreign banks, agencies, and stock companies operating in exchange. He urges that each such institution should be directly fiscalized by some agent of the Government. In order to effect a better control of exchange operations—especially those of foreign banks—Dr. Carlos recommends the following measures:

"(a) To maintain the Bureau of Fiscalization of Exchange Operations in the modest condition in which it is now organized.

"(b) To institute direct fiscalization over exchange operations of each bank for the sole end of preventing speculation.

"(c) To give to the Minister of the Treasury the nomination of the president of the Camara Syndical de Corretores of Rio de Janeiro, Santos, and other important cities.

"(d) To make effective the realization of two-thirds of the capital of the banks in this country.

"(e) To increase to 200 contos (\$55,000) the deposit in the Treasury for all those who wish to operate in exchange, not excepting any bank to engage in operations of this kind without making this deposit."

BRITISH GUIANA.

STEADY DECLINE IN GOLD OUTPUT.

[Consul George E. Chamberlain, Georgetown, in Supplement to Commerce Reports, Nov. 19, 1919.]

The production of gold in 1918 was the lowest in recent years. The record production of the colony was in the fiscal year 1893-94, when 138,528 ounces were found. Since that time the production has steadily declined, until 1918, when only 24,546 ounces were mined, a falling off of 5,000 ounces from the previous year and about 12,500 ounces less than in 1916.

CHILE.

Coinage executed during the year ended Dec. 31, 1919.

5 centavos.....	1.0000	400	.4000	15.4320	6.1728	.0183

ART. 2. The President of the Republic shall order the melting of the former silver coins with a higher fineness and the coinage of new 1-peso silver coins from the bullion obtained therefrom.

ART. 3. The power of the President of the Republic to order the coinage of the rest of the coins, as per terms of previous laws, is hereby declared at an end.

Done at Santiago this 8th day of August, 1919.

Imports of gold bullion from Australia during the year ended December 31, 1919, amounted to 2,662,318 pesos (\$971,746).

SILVER, NICKEL, AND BRONZE COINAGE.

[From Bulletin of the Pan American Union, October, 1919.]

The Government has authorized the coining of 20,000,000 pesos, nickel, in 10, 20, and 5 cent pieces, and copper 1 and 2 cent pieces; also the coining of 5,000,000 pesos, silver, in 1 peso coins. The composition of the nickel coins will be 25 per cent nickel. The composition of the copper coins will be 95 per cent copper, 4 per cent tin, and 1 per cent zinc. The silver coins will be 50 per cent silver, 9 grams in weight. The law also provides that nobody shall be obliged to accept more than 50 pesos in nickel money.

NOTE CIRCULATION AND GOLD STOCK.

RESERVE OF BANK OF CHILE.

[From Bulletin of the Pan American Union, March, 1919.]

At the present time the bank has a reserve of 36,000,000 pesos paper and 5,000,000 gold.

CONVERSION OF PAPER MONEY EXTENDED.

[From Bulletin of the Pan American Union, March, 1919.]

An executive decree postpones the conversion of legal-tender paper money until December 31, 1919, and forbids exports of gold under penalty of confiscation.

COLOMBIA.

PRODUCTION AND EXPORTS OF GOLD DURING THE YEAR 1918.

[Consul Claude E. Guyant, Barranquilla, in Supplement to Commerce Reports, May 27, 1920.]

The actual value of the gold produced in 1918 was slightly over \$6,000,000, most of which is accounted for in exports to the United States and receipts at the Colombian mint at Medellin.

Exports:	
Bullion.....	\$1, 616, 159
Dust.....	30, 020
Precipitates.....	346, 341
Total.....	1, 992, 520
Receipts of bullion at mint.....	3, 964, 822
Grand total.....	5, 957, 342

IMPORT OF GOLD COIN.

According to a bulletin of the Pan American Union, August, 1920, Colombia imported during the calendar year 1919, 8,396.89 kilograms (269,960 ounces) of gold coin, valued at 4,594,163 pesos (\$4,471,499).

[From Bulletin of the Pan American Union, April, 1919.]

During the middle of February the steamship *Sousa* docked at Puerto Colombia with a cargo of \$1,000,000 in American coins for the Banco Mercantil Americano of Colombia, which will distribute them among its branches in Bogota, Barranquilla, Medellin, and Cartagena. Including this shipment the bank has imported \$2,126,000 in gold coin within the past eight months.

EXPORT DUTY AND EMBARGO ON GOLD.

[Cablegram from American Minister Philip, Bogota, May 12, 1919, in Commerce Reports, May 19, 1919.]

A presidential decree was published May 11, 1919, establishing a tax of 5 per cent on all platinum exported from Colombia after June 15, 1919. The same decree prohibits all exportation of gold of any quality without prior Government permit as long as the existing restrictions on the exportation of gold are in force in Europe and the United States. After satisfactory proofs have been furnished that like amounts have been imported from European countries or the United States, permits will be granted for the exportation of an equal amount of gold in substitute therefor. There is no change in the export duty on gold.

GOLD AND SILVER COINAGE.

[From Bulletin of the Pan American Union, November, 1919.]

From August, 1914, to July last, the amounts of moneys coined in the mint of Medellin have been as follows: Gold coin, 7,914,172 pesos; silver coin, 705,011 pesos gold value. The latter part of July there were more than 2,500,000 pesos on hand to be coined. The amount minted for the month of July was 1,500,000 pesos, gold, and 40,000 pesos, silver.

GOLD COINAGE DURING 1919.

[From Bulletin of the Pan American Union, July, 1920.]

Colombian gold coined by the mint at Medellin during 1919 amounted to 13,044,232 pesos (\$12,695,951).

GOLD COINAGE AND GOLD IN CIRCULATION.

[From Bulletin of the Pan American Union, September, 1919, p. 341.]

During the month of June the mint of Medellin coined 210,539 Colombian pounds, or \$1,052,695 in gold, a much larger sum than the amount coined in the first five months of the present year, which was \$204,677. The amount of coined gold in circulation in the Department of Antioquia is calculated as \$6,000,000.

[From Bulletin of the Pan American Union, October, 1919, p. 464.]

About the middle of August the first issue of gold coined in Bogota was put in circulation. The coins are half condors, equal in value to an English pound sterling (\$4.8665), and are perfectly made.

COINAGE OF FIVE CENTAVO NICKEL PIECES.

[From the Bulletin of the Pan American Union, December, 1919.]

The treasury department has ordered the mint at Bogota to issue nickel coin of the denomination of 5 centavos. These coins are badly needed in facilitating small business transactions.

MONETARY CIRCULATION IN COLOMBIA.

[From Bulletin of the Pan American Union, October, 1919.]

The following data were given in the message read by the President at the opening of the present session of congress: Circulation of money, 7,700,000 pesos coined gold (peso=\$0.9733), 10,180,000 paper money, 6,400,000 silver coins, and 1,194,000 nickel coins; to this must be added 3,200,000 pesos in treasury certificates, and 1,200,000 small mortgage certificates of banks, making approximately a total of 30,000,000 pesos in circulation.

MONETARY CIRCULATION ON DECEMBER 31, 1919.

[From El Economista, Madrid, April 10, 1920.]

The monetary circulation in Colombia at the end of last year was estimated at over forty-two billion pesos, most of it being gold.

CURRENCY OF BRITISH POUND STERLING.

[From Bulletin of the Pan American Union, March, 1919.]

It has been decreed that Federal officers accounting for national funds may receive at par in payment of all public revenues on the footing of national currency the British pound and half pound sterling, and bills representing the same, issued by the English Government or by the Bank of England.

AMERICAN GOLD COIN LEGAL TENDER IN COLOMBIA.

[From Bulletin of the Pan American Union, August, 1919, p. 218.]

Inasmuch as the Government of the United States has decided to issue unrestricted licenses permitting exports of gold to Colombia with the object of encouraging and facilitating the circulation of large quantities of American gold coin in that Republic, the banks of Bogota have agreed to receive said gold coin at par with the pound sterling, which is a legal tender in Colombia, and in furtherance of this decision the treasury department has sent to its collectors, and to customhouse and salt-mine administrators, etc., a circular recommending that payments made to them in gold coin of the United States be accepted at face value.

* * * * *

The principal Colombian banks have advised the public that in the future accounts current and sight deposits payable in English, American, or Colombian gold, will be treated as payable in "coined gold."

FINANCIAL CONDITIONS OF THE ANTIOQUIA DISTRICT.

[Trade Commissioner P. L. Bell, in Commerce Reports, December 6, 1919.]

The financial situation in the Department of Antioquia is different from that in any other part of Colombia. Antioquia is the largest gold-producing State, an average of \$4,000,000 in gold being produced annually. In Medellin gold circulates freely and all transactions are on a gold basis. This has been especially true during the year 1919. With New York exchange fluctuating between .86 and .90, and the pound sterling at a discount of 20 per cent and more, gold was not exported but turned in at the local government mint for coinage into Colombian gold coin. This gold was then used to purchase New York drafts at the prevailing rate of exchange. Also during the latter part of 1918 and the first half of 1919, over \$6,000,000 in United States gold coin was imported into Colombia, and the greater portion of this amount was sent to Medellin for coinage into Colombian gold coin, the difference in intrinsic value as compared with the United States gold coin being approximately 2.75 per cent. As a result, Antioquia is doing business with gold coin while throughout the rest of the country very little gold is seen and paper money of various kinds forms the medium of exchange. Another factor tending to hold this gold in Antioquia is the high transportation rates on specie shipments in Colombia. Owing to the fact

that Antioquia has always produced large amounts of gold, with gold as the basis of exchange, all new issues of Government and bank paper currency have been looked upon with suspicion by the people of this department, and it is only with the greatest difficulty that paper currency can be put into general circulation in this district.

COINAGE CAPACITY OF MINT—CERTIFICATES OF GOLD DEPOSITS.

The national mint at Medellin possesses a complete, although small, electrolytic plant, and recent improvements made this year increase the coinage capacity from \$500,000 in gold coin to \$2,000,000, with new extensions planned which will make it possible to mint \$6,000,000 worth of gold coin per annum. On account of the great amount of gold presented at the mint for coinage into Colombian gold coin, and because of the limited capacity of the mint, the expedient has been adopted of issuing certificates of gold deposits in small denominations in order to make the commercial use of this gold immediately available for holders of gold awaiting coinage. The certificates of deposit circulate freely and are everywhere accepted in the district, as they call for the delivery of an equal amount of Colombian gold coin on a certain date; gold delivered to the mint for coinage has to await its turn.

DUTCH GUIANA.

PRODUCTION OF GOLD.

[Consular Agent J. S. Lawton, Paramaribo, in Supplement to Commerce Reports, Nov. 19, 1919.]

Very unfavorable rates of exchange, which obtained during the greater part of the year, hampered the gold-mining industry, but near the end of the year considerable gold was sold in French Guiana for shipment to Paris, where for a time a premium was paid on this product. In this manner 400,225 grams were disposed of. Very little was done in the way of new work or prospecting. The total gold production for the year was valued at \$389,675, as compared with \$392,752 in 1917.

ECUADOR.

EXCHANGE RATES.

[Consul General Frederic W. Goding, Guayaquil, in Supplement to Commerce Reports, Nov. 8, 1919.]

The year 1918 witnessed remarkable fluctuations in the rate of bank exchange. During the first nine months the rate was 2.43 sucres to the dollar, rising gradually to 3.2, and for a few days even to 3.3. Immediately after the signing of the armistice the rate of exchange rapidly fell again to 2.43, at which point it had been fixed by the minister of finance, and before the end of the month it reached the low mark of 2.09 (the normal rate of exchange being 2.075 sucres to the dollar).

PARAGUAY.

Approximate stock of gold and paper currency used for monetary purposes on Dec. 31, 1919.

Government notes.....	68,103,878	56,896,122	125,000,000
United States equivalent.....	\$65,706,621	\$54,893,379	\$120,600,000

¹ Principally Argentine paper held as the equivalent of gold, including that held abroad.

² Rate of conversion, Argentine gold peso, \$0.9648.

MONETARY CONDITION.

The actual currency is depreciated paper. Premium on gold: Highest, 20.71 paper pesos to 1 peso Argentine gold; lowest, 16.65; average, 19.01.

The only foreign money that enters Paraguay to any great extent is Argentine paper currency, and this is continually being returned in payment of foreign obligations, so that it is impossible to estimate the amount on hand or in circulation at any given time.

Since August, 1914, banking and commercial operations in gold coin have virtually ceased in Paraguay, Argentine paper currency taking the place of gold.

The amounts held by the banks in gold coin are largely in Argentine paper currency, taken at the fixed rate of exchange of 44 cents gold to 1 Argentine paper peso. Silver coins are not used, though there are some in existence yet.

The "Banco de la Republica" is the only one authorized to issue notes, under their concession of 1908, under the denomination "moneda nacional," at the fixed rate of exchange of 10 Paraguayan paper pesos to 1 gold peso. They issued a certain amount, but, owing to subsequent rise in exchange, they decided to withdraw these notes from circulation. According to their balance sheet of June 30, 1919, against 25,785 pesos issued, they held in cash 23,123, so that there was a very small amount in circulation, which at this date may have totally disappeared.

FINANCES, BANKING AND EXCHANGE RATES.

[Consul Henry H. Balch, Asuncion, in Supplement to Commerce Reports, Oct. 2, 1919.]

During 1918 the question of a stable currency again became prominent. In January 1 Argentine gold peso was worth about 35 Paraguayan pesos. The decline was slow until the months of November and December; then by its rapidity the decline caused a panic in the commercial world. Wages, prices, and Government finances were all calculated at the rate of 25 to 30 pesos to 1 Argentine gold peso. As a result, wages were doubled and even tripled; prices also automatically took the same turn; and business, on account of the uncertainty, saw itself confronted by stagnation. People would buy only the merest of necessities.

Toward the end of the year when the exchange market became more or less stable, the wholesalers, who make their purchases in gold, began reducing their prices. It is hardly expected that the retail prices will be reduced to correspond to the present value of the paper currency.

The rates of exchange with foreign countries are the same as those used in Buenos Aires, with a slight percentage added. The discount rates of all banks are the same—12 per cent per annum.

GOLD FUND IN NEW YORK FOR STABILIZING OF EXCHANGE.

[From the Washington Post, Nov. 12, 1919.]

ASUNCION, PARAGUAY, *November 11.*—For the purpose of stabilizing exchange with Paraguay, a convention by which Paraguay will establish a gold fund has been signed by the Paraguayan foreign minister and Daniel F. Mooney, the United States minister, acting for the international high commission, which was created some time ago to obtain uniformity of exchange between the Americas.

It is understood that the gold fund will be accumulated from Paraguayan revenues and sequestered in New York. The convention is regarded as a long step toward establishing the finances of Paraguay on a firm basis.

PERU.

Coinage executed during the year ended Dec. 31, 1919.

Denomination.	Pieces.	Value.	
		<i>Peruvian pounds.</i>	<i>U. S. dollars.</i>

United States equivalent.....		\$7,670,125	\$17,190,084	\$24,862,190

The premium on gold for 1918 was: Highest, 5.85; lowest, 5.01; average, 5.48.

The imports of gold coin during the calendar years 1918 were: £P. 3,320 (\$16,155) from the United States and £P. 70,600 (\$343,540) from Chile.

NOTE.—Exports of gold and silver have been prohibited since August, 1914.

URUGUAY.

GOLD RESERVE OF URUGUAYAN BANKS.

[From Bulletin of the Pan American Union, April, 1920.]

According to a statement issued in November, 1919, the reserve of gold in the banks of the country amounted to 60,557,072 pesos, distributed as follows: 53,627,758 pesos in the Bank of the Republic, 3,201,982 pesos in other Uruguayan banks, and 3,727,332 pesos in foreign banks.

COINAGE OF 20-CENTAVO SILVER PIECES RECOMMENDED.

[From the Bulletin of the Pan American Union, December, 1919.]

The senate finance committee has recommended that silver coin of the denomination of 20 centavos be minted to the amount of from 300,000 to 500,000 pesos.

GOLD COIN ON HAND.

[From Bulletin of the Pan American Union, December, 1919.]

The gold coin on hand at the close of August, 1919, was 62,238,685 pesos. Cash on hand, 72,769,530 pesos, as shown by the report of the inspector of the Bank of Uruguay.

EMISSION OF BANK NOTES IN URUGUAY.

[Consul William Dawson, Montevideo, in Commerce Reports, May 19, 1919.]

By a law of February 20, 1919, the Bank of the Republic has been authorized to issue notes up to the sum of 2,000,000 pesos (\$2,068,000) in 5-peso denominations (\$5.17), which shall bear a special stamp reading "Convertible into major emission." These notes will be considered as of major emission as far as article 10 of the charter of the bank is concerned and will be withdrawn from circulation during the present year.

The statement of the directorate of the bank recommending this special issue contains the following interesting information:

Messrs. Waterlow & Sons, of London, ordinarily supply the Bank of the Republic with notes, but difficulties resulting from the war and the British export embargo led it to contract with the Casa de Moneda (mint) in Buenos Aires for over 8,000,000 of pesos (\$8,272,000) in 100-peso notes. Following the recent discovery of the counterfeiting of these notes the bank has been compelled to withdraw them from circulation and to give up plans for further printing in Buenos Aires, thus aggravating the present very serious scarcity of a circulating medium. The lack is so great that the bank has recently been compelled to refuse various lots of gold offered in exchange for notes.

In some cases certificates of emission of 1,000 and 5,000 pesos (\$1,034 and \$5,170) have been issued, but commerce urgently needs more notes of smaller denominations. The new emission will tend to relieve the situation and will at the same time be included as a charge against the bank's gold reserve in computing the maximum issue authorized. The bank possesses a considerable stock of unissued 5-peso notes, and Messrs Waterlow & Sons have now offered to print 1, 10, and 100 peso notes within five months. It also appears that the printing of notes at Montevideo has been under consideration.

VENEZUELA.

Amount of gold and silver withdrawn from monetary use during the year ended December 31, 1918, unknown; practically none.

No data available on the production of gold during the year 1918.

United States gold coin imported during the calendar year 1918 amounted to 6,089,227 bolivars (\$1,175,221).

Stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1918.

COINAGE LAW.

[From the Gaceta Oficial, Caracas, July 3, 1918.]

ARTICLE 1. The coinage of money shall be reserved exclusively to the Government.

ART. 2. The monetary unit of the United States of Venezuela shall be the gold bolivar which shall contain two hundred ninety thousand three hundred twenty-three millionths of a gram (0.290323) of fine gold, and shall be divided into one hundred equal parts or centesimos.

ART. 3. The United States of Venezuela shall manufacture gold, silver and nickel coins of the following specifications:

GOLD.

Denomination.	Weight.	Weight tolerance.	Diameter.	Fineness.	Fineness tolerance.	Pure gold or silver.	United States equivalent.

5 centimos.....	2.5000	.030	19	75 per cent copper.....	38.5800	.0096

ART. 14. The coinage or recoinage, to meet the country's needs, shall be ordered by the federal executive, upon request of the national congress which decides upon the amount to be coined or recoined.

ART. 15. No silver coinage shall be authorized, without authorizing, by the same law, twice that amount of gold coinage; but, if at the time the silver coinage is authorized, there is in the reserve fund of the treasury double the amount of gold, the federal executive may authorize the coinage of silver only, as per act of the national congress.

ART. 18. The national gold coins shall be legal tender to any amount. The silver and nickel coins shall be legal tender as follows: The coins 0.900 fine, to 500 bolivars; the coins 0.835 fine, to 50 bolivars; the nickel coins, to 10 bolivars.

The above provisions apply in all payments, except when otherwise stipulated by law.

ART. 20. Foreign gold coins shall be legal tender when so declared by the federal executive, at the equivalent of the fine gold therein contained.

ART. 21. The federal executive shall decide upon the measures necessary to ascertain the quality of foreign gold coins permitted to circulate as legal tender.

ART. 22. Payments stipulated to be made in foreign coins may be liquidated, except in special cases, by delivering the equivalent in legal tender currency, at the current rate of exchange, at the time and place of payment.

ART. 23. It shall be prohibited to import and put in circulation foreign coins, other than gold.

ART. 24. The Government shall have the sole right to import Venezuelan silver and nickel coins.

ART. 26. Counterfeit money shall be confiscated and placed in the hands of the criminal court.

ART. 27. The law recognizes only accounts kept in bolivars and centimos of bolivars.

ART. 28. The use of any currency or conventional instruments taking the place of money, is strictly prohibited, except Venezuelan bank notes and other notes issued and put in circulation by legislation.

ART. 30. Acceptance of perforated, filed or otherwise altered coins shall not be obligatory. Neither shall be obligatory the acceptance of gold coins which through any cause have lost five thousandths (0.005) of their legal weight, and of silver and nickel coins which through excessive use have become illegible on both sides.

ART. 31. The coins issued in conformity with the law of March 23, 1857, and up to July 9, 1891, shall remain in circulation at the rate fixed by the above provisions and shall be legal tender as per article 18 of the present law.

ART. 32. The coinage law of July 9, 1891, is hereby repealed.
Done at Caracas, this 15th day of June, 1918.

BANKING LAW.

BANKS OF ISSUE.

ART. 4. The Government shall have the exclusive right to authorize the issue of legal tender bank notes, with sufficient reserve for their redemption at par, at sight and to bearer, and to grant permission for their issue to Venezuelan or nationalized companies, under the conditions established by this law.

ART. 7, sub. 3. Every bank of issue shall issue at the end of each month a statement of its resources and liabilities, and submit a copy thereof to the minister of the interior, indicating the total amount of gold, silver, nickel, and notes of any sort on hand at the bank and at its branches, as well as the bank reserves and the notes in circulation.

ART. 9. Banks of issue may issue notes to a maximum of double the amount of their paid-up capital, and in that case, the total face value of the notes shall be covered by the stock of legal tender money in the vaults and by the amount of bills receivable at sight or, within 30 days; however, under no circumstances shall the amount of gold coin in the vaults fall below 33 $\frac{1}{3}$ per cent of the notes actually in circulation.

ART. 10. The limit of double the paid-up capital, fixed by the preceding article, may be exceeded, and notes may be issued to treble the amount of the said capital, but, in that case, the notes to double the amount of paid-up capital shall be covered in accordance with the said article, and the notes in circulation in excess of that limit, shall be covered by an equal amount of legal gold coin actually in the vaults of the bank.

ART. 16. The directors or administrators, cashiers, and leading officials of a bank of issue shall not enjoy personal credit in the banks in which they are directors or administrators. Loans granted them shall be guaranteed by mortgage upon their property, the value of which shall exceed by at least one-third the total amount of the loan granted; and all the directors shall be responsible for credits extended to any of the aforesaid parties.

COINAGE OF SILVER.

[From Bulletin of the Pan American Union, February, 1919.]

In accordance with the law enacted by congress in June, 1918, the president has ordered the coinage of silver referred to in said law, in pieces of 5, 2, 1, 0.50, and 0.25 bolivars, representing a total value of 5,300,000 bolivars.

TREASURY RECEIVES SILVER COINAGE.

[From Bulletin of the Pan American Union, February, 1920.]

On December 18, 1919, the national treasury received 5,000,000 bolivars (bolivar=\$0.193) in silver coin, the balance of the amount minted in Philadelphia in accordance with a decree of January 10, 1919. This coin is now on deposit in the Bank of Venezuela awaiting the decision of the treasury department as to its disposition.

RATE OF EXCHANGE FOR 1918.

[Consul Homer Brett, La Guaira, in Supplement to Commerce Reports, July 19, 1920.]

The principal feature from a financial point of view was the continuous and violent fluctuation in rates of exchange, which commenced in January and lasted through the entire year. The value of the dollar, which is considered in Venezuela to have a nominal par of 5.20 bolivares, varied during the year from 4.20 to 5.10 bolivares. This introduced a speculative element into business and caused lower prices for products of the country. The cause of the situation outlined was the large excess of exports over imports, coupled with inability to import gold freely. During the first months of 1919 considerable quantities of gold were brought in and the situation was much improved.

EUROPE.

AUSTRIA.

EXISTENCE OF THE AUSTRO-HUNGARIAN BANK EXTENDED.

[From *L'Economiste Europeen*, Paris, Jan. 2, 1920.]

The existence of the Austro-Hungarian Bank, which was to end on December 31, 1919, as per terms of the treaty, has been extended indefinitely by the parties concerned.

The present statute will remain in force until it is modified by new legislative measures. Accordingly, the bank can, from January 1, 1920, discount and issue paper currency as heretofore. Its paper money retains its legal tender quality. All agreements made with the Austrian and Hungarian Governments remain in effect. However, the board of directors of the Austro-Hungarian Bank will begin immediately to negotiate with the two Governments at Vienna and at Budapest its eventual liquidation.

The branches which the Austro-Hungarian Bank has at present in Poland and Czechoslovakia must be liquidated at once.

MONETARY STOCK AND NOTE CIRCULATION OF THE AUSTRO-HUNGARIAN BANK.

² This does not, apparently, include the scrip notes (*Kassenscheine*).

THE MONETARY QUESTION IN AUSTRIA.

[From *L'Economiste Europeen*, Paris, Apr. 25, 1919.]

The amount of bank notes "nationalized" in Austria by stamping is 4,804 millions of crowns. The total fiduciary circulation in the countries of the former monarchy being 34,500 million crowns, the share assumed by German-Austria comes to about 14 per cent.

AUSTRIA'S PAPER CURRENCY.

[From the *Commercial and Financial Chronicle*, New York, Nov. 8, 1919.]

The following Vienna advices are taken from the New York Evening Post of November 7:

"A statement issued by the State Bank shows that there are now 10,180,000,000 stamped crowns in circulation in Austria."

The Post added:

"At the end of 1913, the Austro-Hungarian Bank had outstanding 2,493,600,000 crowns in note circulation; at the end of 1917 the total was 18,439,700,000. The 'stamped crowns' refer to only a part of this circulation."

BELGIUM.

No data available on quantity of gold and silver used in the industrial arts during the year ended December 31, 1919.

NOTE.—The gold production of the Belgian Congo during the calendar year 1919 was 3,370 kilograms (108,346 ounces).

THE NATIONAL BANK OF BELGIUM.

[From the Bankers' Magazine, London, August, 1919.]

The National Bank of Belgium has resumed the publication of its weekly returns, which had not been issued since that of July 23, 1914. The situation revealed is in many respects better than might have been expected, for comparison with the return of July 23, 1914, shows that the gold stock, at least, is intact, having increased from 261,625,000 francs to 265,785,000 francs. On the other hand, the silver has gone down from 69,074,000 francs to 26,197,000 francs, owing to the panic on the outbreak of war, when large numbers of notes were exchanged for silver 5-franc pieces. The holding of foreign bills, which in normal times was regarded as the equivalent of gold for reserve purposes, declined from 136,777,000 francs to 34,209,000 francs, while a new item among the assets is that of "Advances to the State," which amounts to the enormous sum of 5,646,318,000 francs. On the other side the notes in circulation are 4,699,757,000 francs, as compared with only 976,399,000 francs before the war. The treasury current account is 1,074,185,000 francs, against 19,109,000 francs, and the amount of private accounts 1,194,076,000 francs, against 67,194,000 francs. The large note circulation is due mainly to the replacement of the German mark currency by Belgian notes.

CONGO GOLD FOR BELGIAN GOLDSMITHS.

[Trade Commissioner C. E. Herring, Brussels, in Commerce Reports, Jan. 19, 1920.]

Belgian goldsmiths and jewelers have had considerable difficulty in obtaining materials recently, and the Minister of Colonies has just decided to reserve for the domestic industry a sufficient quantity of the gold imported from the Kongo. The gold will be sold when refined only to such manufacturers as bind themselves to use the material in their own workshops and not to reexport it in an unmanufactured state. Supplies will be furnished according to the output of the shop, and goldsmiths and manufacturing jewelers have been invited to notify the president of the manufacturers' syndicate as to the monthly amounts required, which statements will be verified by a distributing committee. Others needing gold for industrial purposes may later be admitted to participation in the arrangement.

GERMANY TO REDEEM 6,000,000,000 MARKS.

[From the Commercial and Financial Chronicle, New York, Nov. 29, 1919.]

Brussels cablegrams of November 28 state that "an agreement has been arrived at between the Belgian and German Governments whereby Germany during a period of 20 years will redeem 6,000,000,000 marks which were issued by the Germans in the occupied territories."

FOREIGN COINS WITHDRAWN FROM CIRCULATION.

[From the Moniteur des Interets Materiels, Brussels, Nov. 26, 1919.]

During the period of occupation and since the armistice, French, English, and Luxembourg coins have been circulating in large amounts and have been accepted out of courtesy.

In order to expurgate our monetary circulation and to enable the holders of said coins to dispose of them without loss, the State collectors (direct taxes, customs and excise duties, registry, railways, posts, and telegraphs) as well as the National Bank of Belgium and its branch offices in the provinces (State revenue service) have been instructed to continue to accept them in payment until January 1 next, and not to return them into circulation. After that date they will no longer be accepted by the State authorities and their circulation shall be prohibited as in the past.

METALLIC STOCK AND NOTE CIRCULATION OF NATIONAL BANK.

[Trade Commissioner C. E. Herring, Brussels, in Commerce Reports, Apr. 23, 1920.]

The balance sheet of the Banque Nationale de Belgique for December 31, 1919, shows a note circulation of 4,785,915,724 with a total reserve of 350,400,377 francs. The largest credit item shown by the bank's statement is the sum of 5,800,000,000 francs advanced to the Government for the retirement of the German marks.

A recent agreement between the Belgian and the German Governments provides for the reimbursement at par of some 5,500,000,000 marks. This claim is not, however, a first lien on German resources, as certain reparation expenses have priority.

The fiduciary circulation of Belgium has been slowly increasing since the armistice, but should be considerably reduced when the Government has reimbursed the Banque Nationale from the proceeds of the recent internal loan of 2,500,000,000 francs. The Government has announced that it would devote 1,000,000,000 francs to this purpose. On March 4 the note circulation was 4,940,949,490.

BULGARIA.

No statistics available as to amount of gold and silver coin withdrawn from monetary use during the year ended December 31, 1919.

No statistics available as to quantity of gold and silver used in the industrial arts, as the melting of coin for such use is prohibited by law.

No gold quotations as the traffic of gold is prohibited by law. An unofficial exchange rate is given as 265 paper leva for 20 gold leva.

Gold coin to the amount of 26,000,000 leva (\$5,018,000) was exported to the United States of America during the year 1919.

CZECHOSLOVAKIA.

No gold or silver in the form of old plate, jewelry, etc., were deposited at the mint for coinage during the year ended December 31, 1919. Trading in gold and silver coins is prohibited by law; data on secret trading not available.

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1919, was: Gold, 1,050 kilograms fine (33,758 ounces); silver, 7,320 kilograms fine (235,338 ounces).

The estimated production from deep mines during the calendar year 1919 was: Gold, 189 kilograms fine (6,076 ounces), valued at 7,560,000 Czechoslovak crowns (\$1,459,080); silver, 18,069 kilograms fine (580,918 ounces), valued at 72,276,000 Czechoslovak crowns (\$13,949,268).

NOTE.—Gold was valued at 40,000 Czechoslovak crowns per kilogram fine; silver was valued at 4,000 crowns per kilogram fine (6,076 ounces, at \$20.67 per ounce = \$125,609.40).

Stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1919.

¹ This item was entered as 90,000,000 Austro-Hungarian crowns (1 crown=\$0.2026); the Czechoslovak crown valued at \$0.193.

CURRENCY OF THE COUNTRY.

The Czechoslovak State has no gold or silver coins of its own. All the gold and silver coins of the former Austro-Hungarian State, the greater part of which had been kept in concealment by the populace during the war, have been withdrawn from circulation by the Czechoslovak Government (in March, 1919) to accumulate metal for the treasury. No legislative measures have been taken so far by the Government concerning the coinage or recoinage of the metal available.

LAWS AFFECTING THE CURRENCY.

During the calendar year 1919 the following monetary and banking laws were enacted:

1. Law No. 84 (Code of Laws) of February 25, 1919, authorizing the minister of finance to stamp all Austro-Hungarian bank notes, etc.
2. Ordinance No. 119, of March 6, 1919, adjusting relation to Austro-Hungarian Bank.
3. Law No. 187 (Code of Laws) of April 10, 1919, adjusting circulation and administration of Czechoslovak currency.
4. Ordinance No. 246 (Code of Laws and Regulations) of May 12, 1919, on the organization of the banking department of the ministry of finance.

IMPORTS AND EXPORTS.

No gold or silver was imported during the year ended December 31, 1919. The export of gold and silver during the calendar year 1919 was prohibited by the State.

MONETARY DATA OF 1918.

The estimated amount of gold used in the industrial arts during the year ended December 31, 1918, was 500 kilograms (16,075 ounces); the estimated amount of silver used for the same purpose was 4,000 kilograms (128,600 ounces).

The amount of silver won from the Příbram State mines was roughly estimated at 17,256 kilograms (554,780 ounces).

It was also reported that the Roudny gold mines, owned by an English syndicate, are yielding about 30 kilograms (964.5 ounces) per month.
No data available on the monetary stock of the country.

The official rate of premium on gold was fixed by the Austro-Hungarian Bank at 200 per cent.

There were no imports or exports of gold and silver during the year ended December 31, 1918.

BOHEMIAN FINANCES.

[From Commerce Reports, Mar. 25, 1919.]

The ministry of finance has taken steps to collect gold coins and other gold now held by private owners, which is to form a nucleus of the gold reserve of the future National Bank of Bohemia. During the war the Bohemians are reported to have bought up and hoarded considerable quantities of gold. Jewelry of gold is to be delivered to the State pawnshop at Prague, where it will be appraised at its actual value. Other gold and coins will be received by Bohemian banks.

It is estimated that more than 10,000,000,000 crowns of notes of the Austro-Hungarian Bank, out of a total of 35,000,000,000 crowns now in circulation, are held by citizens of the Republic of Bohemia.

CURRENCY REFORM.

[Extracts from Commerce Reports, May 15, 1919.]

NOTE ISSUES AFTER COLLAPSE OF MONARCHY.

The Dual Monarchy which granted the Austro-Hungarian Bank the privilege to issue notes is no longer in existence; but the bank goes on issuing new notes as if nothing had happened. These new notes on March 7, 1919, showed an increase of 2,000,000,000 kronen over the figure of December 31, 1918. This increase is attributed largely to the borrowings by the new Hungarian Government, though it had been agreed that the bank "was not to lend money to any of them without the consent of all the others."

MEASURES TO CURB INFLATION.

The first measure to curb inflation was an ordinance issued in January, 1919, prohibiting advances of money by the Austro-Hungarian Bank on war bonds as collateral. This was effective as to the branches of the bank in the Czecho-Slovak Republic, but could not put an end to the printing of new notes in Vienna and Budapest.

In order to make impossible any further dilution of the currency the National Assembly of Bohemia voted two important laws on February 25, 1919. One of these laws provided that the bank notes circulating in Bohemia should be officially stamped so as to be distinguished from Austrian, Hungarian, and other notes; that one-half of the notes, when stamped, should be retained by the State as a forced loan; and that a census of property should be taken as a basis for a general property tax.

THE STAMPING OF BANK NOTES.

The stamping of bank notes was accomplished in 10 days, February 26 to March 9, 1919. The frontiers were closed to foreign mails and to passenger traffic during that period and other precautions were taken, so as to make impossible any importation of bank notes from other countries.

Bank notes of the denomination of 10, 20, 100, and 1,000 kronen were to be presented for stamping during the period specified, and all unstamped notes of these classes ceased to be legal tender in the Republic after March 15. Notes of 1 and 2 kronen retain their legal tender character without being stamped. The notes of 10,000 kronen are not recognized as legal issue in Czecho-Slovakia, and the notes of 25 and 200 kronen ceased to be legal tender on March 15, 1919. Notes already stamped by the Jugo-Slav Government were not accepted for restamping.

In accordance with the law, 50 per cent of the notes presented for stamping by any person, firm, or corporation has been retained by the Government. The amount so retained is treated as a deposit, the owner receiving a certificate bearing interest at 1 per cent, the rate now paid by savings banks on larger amounts. The retention of the notes is in no sense a confiscation; it is simply a forced loan in the interest of currency reform. The Government will make no use of the bank notes retained, nor can the owners dispose freely of their deposits, as certificates can not be transferred, pledged or otherwise negotiated. The money will be retained in the Treasury until the property tax has been paid, when the notes will be returned. Small amounts are to be returned earlier, as soon as the data for the capital levy have been collected.

THE CENSUS OF PROPERTY.

The 50 per cent of bank note holdings retained by the Government may be considered as a pledge or guaranty of a correct declaration of personal property. The third section of the law provides for a census of property to be taken March 1, 1919, which is to serve as a basis for the assessment of a property tax and a tax on war profits. The property to be listed includes bonds of Austrian and Hungarian war loans; scrip of the Austro-Hungarian Bank; stocks and bonds of financial, industrial, and commercial corporations, and other securities; gold coin and bullion; live stock, agricultural, and other machinery, raw materials and finished products; vehicles, pearls, precious stones, jewelry, rugs, tapestry, musical instruments, art works, collections, and all articles of luxury acquired since the war; life insurance policies, etc. The census is to be as thorough as possible; in many cases failure to declare securities will be punished by forfeiture. Firms and corporations have to submit inventories made up according to a prescribed schedule. Property owned abroad must likewise be listed. All citizens of the Republic, as well as all foreigners who have resided in the country for more than a year, must comply with the latter provision. All other natural or legal persons are required to schedule property situated in the territory of the Republic. The statements must be made under oath, and false statements will be punished as perjury. A fee of 4 or 5 per mille is to be paid for the acknowledgment of bank deposits, war bonds, and scrip of the Austro-Hungarian Bank. Deposits or claims not declared within three months shall be forfeited to the treasury. The minister of finance may prohibit the payment of as much as 50 per cent of such claims.

The provisions of the law are discussed at length in the *Economisch-Statistische Berichten* of Rotterdam in the issue of March 12, 1919. The reviewer observes in conclusion:

"It will be seen that the law provides for taking an inventory of the total national wealth. It is probably the first time in history that a State is attempting to ascertain with great accuracy how wealthy it is, a fact which is naturally of the highest importance for a proper administration of the country's finances."

THE PROPERTY TAX.

The rate of the property tax has not been established as yet, as it will depend on the needs of the Republic and the aggregate amount of taxable property. The tax will be graduated according to the size of holdings, small properties being exempt from the levy. The rate of taxation on property accumulated during the war will be much higher than the rate on property acquired before the war. The property tax must be paid at once. This tax is not a revenue tax; it is intended primarily as a currency measure to withdraw a large amount of bank notes from circulation.

THE CURRENCY LOAN.

The other law, passed February 25, 1919, authorized the Government to issue a currency loan, payable in gold, silver, or foreign securities, the proceeds to be used as cover for the new currency. In explaining the provisions of the bill Dr. Horacek, a member of the national assembly, declared that the new currency must be placed on a metallic basis, and unlimited issue of paper money must be prevented at all cost. He declared that the retention of irredeemable paper is undesirable. A considerable stock of gold will be required to protect the new currency, but there is a sufficient amount of gold, silver, and foreign securities hoarded in the Republic which must be released and put to use. The Government offers to the holders of gold the advantage that this loan will be exempt from the coming property tax and will bear 4 per cent interest exempt from income tax. The interest will be paid and the loan redeemed in the original currencies.

THE RATE OF EXCHANGE.

During the war the Austrian krone steadily depreciated in value. In Switzerland, the chief neutral market for the monarchy, exchange on Vienna on March 7 of the last five years, 1915-1919, was quoted at the following rates in francs for 100 kronen: 83.25, 64.42, 51.24, 56.29, and 22. As the par value of 100 kronen is 105.01 francs, it will be seen that on March 7, 1919, the krone was at a discount of nearly 80 per cent.

The Austro-Hungarian krone exists no longer. There is an Austrian krone, a Hungarian krone, a Bohemian krone, and a Jugo-Slav krone. By the official stamping the Bohemian krone became a distinct unit, and the reduction of circulation and the other measures introduced by Minister of Finance Rasin have improved the exchange rate. On April 22 the American Relief Administration announced the following tentative rates for the various krone currencies, in kronen per dollar: Bohemian, 15; Jugo-Slav, 17½; Austrian, 20.

FOREIGN LOAN.

The Czecho-Slovak press reports that the minister of finance has been authorized by the national assembly to place a loan of \$179,000,000 in the United States. Of this amount \$100,000,000 is to form a gold reserve for the redemption of paper money. In order to effect a complete separation of the monetary system of Czecho-Slovakia from the systems of Austria and Hungary the minister of finance has decided to exchange the stamped notes of the Austro-Hungarian Bank for new notes redeemable in gold. A stable currency is necessary for the resumption of industrial activities on a large scale.

PAPER CURRENCY.

[From the Economist, London, May 3, 1919, p. 726.]

Only 8.2 billions of notes were submitted to the Czech authorities for stamping purposes. Consequently, the Czech minister of Finance estimates that, including the purely Czech issues, the circulation will vary from 4.5 billions to 5 billion crowns (1 crown=\$0.193). This is due to the fact that the smallest amounts submitted by the workmen and small peasants will be paid out in full, owing to the circumstance that the compulsory loan will only be imposed on the well-to-do classes.

THE AUSTRO-HUNGARIAN BANK IN CZECHOSLOVAKIA.

[From the Bankers' Magazine, London, June, 1919.]

The Neue Freie Presse states that, according to an order of the Czecho-Slovak ministry of finance, the Austro-Hungarian Bank, so far as it does business in Czecho-slovakia, has been declared a State bank. The minister of finance has decreed that the interest-bearing State debt arising from the introduction of bank notes, as well as the accounts at the bank and the treasury bills issued by the bank in the Czecho-Slovak State, shall pass into his administration. For this purpose the State takes over the buildings and the fittings of the Austro-Hungarian Bank at Prague and of its branches throughout the Czecho-Slovak State. The officials must henceforth work for the State administration. A bank office of the ministry of finance and a bank committee under the presidency of the minister, as well as an expert board of management comprised of bank officials, are to be established. These measures have been taken without consulting the other States, not even German Austria, and without any previous negotiations with the Austro-Hungarian Bank itself.

DENMARK.

MONETARY STOCK OF THE BANK OF DENMARK ON DECEMBER 31, 1914-1919.

[From the Federal Reserve Bulletin, January, 1920.]

(In 1,000 kroner.)

DENMARK STILL SHORT ON SMALL COINS.

[From The Numismatist, April, 1919.]

Denmark is still suffering from a shortage of subsidiary coins. The Retailers' Union has sent a petition to the secretary of commerce, asking to have more small coins issued. The secretary, in his reply, states that during the year 1918 there was coined 200,000 kroner's worth of iron coins in denominations of 1, 2, and 5 öre; that the mint is now striking 10 and 25 öre in silver, and that the National Bank since November 16, last year, has received from the mint 630,000 kroner's worth in 10 and 25 öre pieces. As fast as the mint can turn them out there will be coined 100,000 kroner in 25-öre pieces and 250,000 kroner's worth of 10-öre pieces, besides a large issue of iron coins.

FINLAND.

The amount of domestic silver coin withdrawn from monetary use during the year ended December 31, 1919, was 1,000 Finnish marks (\$193).

The estimated quantity used in the industrial arts during the year ended December 31, 1919, was: Gold, 460 Finnish marks (\$89); silver, 3,140 Finnish marks (\$606).

Stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1919.

Grand total.....			

There were melted at the Paris mint during the year 1919, 44,000,000 francs of 5-franc silver pieces and 31,773,218 francs of 2-franc silver pieces with the crowned head of Napoleon III.

NEW ISSUE OF MINOR COINS.

[From L'Economiste Europeen, July 25, 1919, p. 58.]

The maximum amount of 15,000,000 francs authorized by the law of August 2, 1917, for the issue of 25, 10, and 5 centime nickel and bronze coins is notoriously insufficient to meet the present needs of the country, and especially the demand of Alsace and Lorraine. Thus the Government has obtained from congress the passage of a bill authorizing a further issue of the aforesaid coins—with a round hole in the center—to the amount of 10,000,000 francs, raising the total circulation of these coins to 25,000,000 francs.

REPORT OF THE DIRECTOR OF THE MINT.

SILVER COINAGE DURING 1919.

[From *El Economista*, Madrid, Feb. 28, 1920.]

Pressure is being brought to bear upon the Government to proceed, like England, to reduce the standard of the silver coinage, of which 76,789,759 francs' worth was struck in 1919 with great loss to the State, due to the high price of the metal, and without noticeably increasing the circulation, as the coins are hoarded or melted clandestinely.

ISSUE OF PERFORATED NICKEL COINS.

[From Samuel Montagu & Co., London, Apr. 10, 1919.]

The Times, under date of April 8, states that 90,000,000 nickel coins, pierced in the center to distinguish them from silver, will shortly be put in circulation in France under the law of August 5, 1913, permitting the coinage of nickel money to take the place of copper.

INCREASE IN NOTE CIRCULATION.

[From *Moniteur des Interets Materials*, Brussels, July 16, 1919.]

The Chamber of Deputies approved, July 9, the bill authorizing the Bank of France to make further loans to the State up to 3 billions of francs and to increase its issue of notes from 36 to 40 billions. This increase in the issue of notes became imperative, as the actual fiduciary circulation on that date had reached 35,007,822,980 francs.

Monetary stock.

IMPORTS AND EXPORTS OF GOLD AND SILVER INTO AND FROM FRANCE, 1917-18.

[Consul General A. M. Thackara, Paris, in Supplement to Commerce Reports, Sept. 27, 1919.]

The value of the imports of gold and silver coin and bullion and of the baser coins in 1918 was 70,018,000 francs (\$13,513,474), as compared with 204,373,000 francs (\$39,443,989) in 1917, a decrease of 134,355,000 francs (\$25,930,515); and the values of the exports during 1918 and 1917 were 21,098,000 francs (\$4,071,914) and 59,840,000 francs (\$11,549,120), respectively, a decrease of 38,742,000 francs (\$7,477,206) in 1918. Gold coin and bullion alone were imported to the value of 75,195,008 francs (\$14,512,635) in 1917 and 13,386,000 francs (\$2,583,498) in 1918. The value of the exports during 1918 was 22,000 francs (\$4,246), as compared with 115,000 francs (\$22,195) in the preceding year. The value of the imports of silver coin and bullion

in 1918 was 56,608,000 francs (\$10,925,344), as against 129,157,000 francs (\$24,927,301) in 1917; and the values of the exports were 20,684,000 francs (\$3,992,012) and 59,540,000 francs (\$11,491,220) in 1918 and 1917, respectively.

LAW PROHIBITING THE IMPORTATION OF GERMAN MONEY REPEALED.

[From Bulletin de Statistique, Paris, August, 1919.]

The law of November 26, 1918, prohibiting the importation of German bank notes, coins, or any other kind of monetary media was repealed by decree of August 1, 1919.

SILVER COIN SHORTAGE—LIMIT ON AMOUNT OF MONEY WHICH MAY BE TAKEN OUT OF THE COUNTRY.

[From the Commercial and Financial Chronicle, New York, Nov. 8, 1919.]

France is at the moment concerned with the disappearance from circulation of silver money and the hoarding of small coin, which has not only brought into use brass checks and stamped paper as a medium of small change but caused the issuance of several edicts by the Government in order to relieve the situation. Among other measures resorted to copyright advices from Paris on October 23 to the New York Sun stated that the Government had issued an order forbidding the removal of gold and silver money from the country on penalty of imprisonment and limiting to 1,000 francs the amount that any person can take out in bank notes; it added that Cornelius Vanderbilt, leaving Cherbourg for New York, was forced to give up 40,000 francs. As to the disappearance of silver coin the Associated Press in Paris cablegrams October 21 said:

"The disappearance of silver money from circulation has resulted in such a shortage of small change that many restaurants in Paris posted notices to-day that customers must make their own change or accept postage stamps in place of silver."

At one time there appeared in the official journal a new law providing a penalty of from 10 days to six months' imprisonment and a fine of from 100 to 5,000 francs for persons convicted of melting, recasting, or otherwise demonetizing French specie. To these penalties was added confiscation of any metal seized.

This disappearance of silver is variously explained. A prominent banker said to-day that the principal cause was the fact that the metal in silver coins is worth more than the face value of the coin, making it profitable for people using silver in the arts and industries to melt coin instead of buying silver in bars. Another explanation is that importers find it to their advantage to pay for purchases in countries like Switzerland in silver, which commands a premium over paper money. It is alleged that one importer collected more than 20,000 francs in small coins with which he paid for purchases in Switzerland.

A third explanation is the tendency of peasants to accumulate silver, as formerly they did with gold when gold was in circulation. The present state of circulation is aggravated by a tendency of small shopkeepers who sell goods in small quantities to hoard small change in the fear of entirely running out of it. A majority of the authorities, however, are of the opinion that speculation and the use of silver money for industrial purposes are the principal causes of the shortage.

The gradual disappearance of silver coin from circulation has caused the minister of justice to circularize his department, ordering that traffickers in money must be prosecuted with the full force of the law. A law promulgated last week made it an offense, punishable with fine and imprisonment to hoard, melt, recoin, or withdraw from circulation any of the legal currency of the country.

The minister of finance to-day issued a warning to travelers that they would not be permitted to take out of the country more than a thousand francs' worth of French or foreign paper money and 10 francs' worth of silver. Offenders, the warning declares, will incur heavy fines and imprisonment.

We also quote the following Paris (Havas) cablegram of October 26:
"Last week's decree of the ministry of finance, limiting to 1,000 francs the amount of French or foreign paper money which travelers might take out of the country with them, does not prevent foreigners taking with them when leaving France any desired sum of money, it is explained by L'Excelsior. They need only change the French bank notes for foreign checks or a letter of credit and obtain from the ministry of finance a permit, which, it is stated, is never refused and is delivered within 24 hours.

"Frenchmen going abroad, too, are permitted to carry more than the stipulated 1,000 francs, if an application for a permit for a sum suited to the length and duration of the journey and the personal position of the applicant is made to the ministry.

"The public prosecutor is continuing his investigation of the crisis caused by the disappearance of silver money and he already has before him several cases of offenses against the recent law, prohibiting the melting down or purchase of coins in order to realize a profit from the high market price for metal in them."

On the same date the Associated Press in Paris cablegrams had the following to say: "The small change famine in France has been intensified by the publicity given to the matter through the passage of legislation making it illegal to melt down silver money and forbidding its exportation. The public is now hoarding small change, and retail business is greatly handicapped through inability to make change."

"Some cafes are issuing stamped paper slips, good only where issued, for sums of less than 5 francs. Some shops and restaurants are also issuing brass checks of 1 franc denomination to serve as change."

"Many shops have posted signs announcing to customers that they must have their own change if they desire to make purchases for amounts of less than 5 francs or for sums which are not a multiple of 5 francs."

"The Government is firm in its decision not to issue paper money in denominations of less than 5 francs to meet the emergency, which it hopes soon to relieve by increased issues of silver."

The copyright Sun advises referred to above stated that "silver francs have been taken to Switzerland in large quantities and converted into bank notes at a profit of 65 per cent. Silver coins also are being melted and sold as bullion at a superior price." In its issue of November 1 the New York Evening Post had the following to say as to the responsibility for the coin shortage:

"Dispatches from Paris indicate that the shortage of silver coins has passed and the monetary difficulties which have confronted the French capital since the homeward movement of American troops is viewed in this country with particular interest because of the part overseas soldiers played in the situation."

"The main cause of the condition is attributed not only to the present high price of silver, which makes the coin more valuable as bullion than as money, but also to the fact that the American soldier has had a hand in the matter. According to competent exchange authorities during the activities of United States troops in France it is estimated that approximately five million 1 and 2 franc pieces were either manufactured into silver band rings and other souvenirs or destroyed by the men during the experimental stages of manufacturing souvenirs. Although Army orders were issued prohibiting the destruction of French coins at the request of the French Government when the destruction became noticeable, it is estimated that an average of two coins for each man were either made into souvenirs, destroyed in the attempt, or brought back to this country in their natural form never to go into circulation again, the latter despite the fact that an order from general headquarters was issued to all troops departing from France prohibiting them from taking silver coins from the country."

THE EMERGENCY CURRENCY.

[From the bullion letter of Samuel Montagu & Co., London, March 25, 1920.]

The Paris correspondent of the Times draws attention to the illegal but practical step, taken by tradesmen in the latter part of the war period, of issuing their own small currency in the form of cardboard counters, bearing the shop stamp and a value which was accepted mutually throughout the neighborhood. At the end of the month chamber of commerce paper coupons are to be issued for franc and half-franc values in substitution for the above-mentioned money issued by private individuals. This emergency currency is to be replaced eventually by State coins in nickel as soon as the mint can cope with the task. The urgency of the reform is evident when we add that among other remarkable substitutes small packets of postage stamps have circulated as exchange media in the French metropolis. It is of great significance that so conservative a country as France with regard to finance should cease using silver for so high a denomination as a franc.

GERMANY.

THE MONETARY SITUATION.

[Extracts from the report of the German Reichsbank for the calendar year 1919, in Federal Reserve Bulletin, June, 1920.]

In view of the impossibility for the government printing office to print the required vast amount of notes, notes were printed in part by private printing plants. They were, accordingly, not safeguarded as carefully against counterfeiting as the other

Reichsbank notes. Nevertheless, the Reichsbank repeatedly took occasion to protest strongly against the widespread rumors, both at home and abroad, about the supposedly serious extent of such counterfeiting.

The so-called emergency currency, issued by municipalities at the suggestion of the Reichsbank as a result of the currency crisis in the last quarter of the year 1918, was almost wholly withdrawn from circulation in the first months of the current year. There remained in circulation for the most part only notes of very small denominations, as the coinage of aluminum pfennig pieces authorized by the treasury department did not reach a sufficient amount until the close of the year.

In order to limit currency circulation the Reichsbank took measures to encourage payments by other means, by opening postal check accounts for all subbranches, by increasing the number of clearing houses, and by other methods.

Mark exchange during the year 1919 in the neutral cities of Amsterdam, Zurich, and Stockholm was quoted as follows:

[Marks per 100 of foreign currency.]

Exchange at—	End of 1918.	Highest in 1919.	Lowest in 1919.	End of 1919.
Amsterdam.....	338.98	332.23	1,980.20	1,843.32
Zurich.....	167.01	164.47	1,025.64	889.57
Stockholm.....	232.56	225.99	1,052.63	1,052.63

The depreciation of the mark, reckoned on the basis of the par value of the foreign currencies, at the beginning of the year amounted to about 52 per cent, and at the end of the year to something like 91 per cent at Amsterdam and Zurich and 89 per cent at Stockholm.

The old charter of the Reichsbank expires by law at the close of 1920. Accordingly a new bank law was passed on December 16, 1919, extending the charter but making new provisions for the participation of the Government in the bank's profits. The new law adjusts the regulations governing the organization and business of the Reichsbank to the new political and industrial conditions, and takes steps to lighten the credit burden assumed by the Reichsbank during the war by permitting the bank to engage in term dealings in foreign exchange.

Monetary stock and note circulation of the Reichsbank.

Items.	Dec. 31, 1918.	Dec. 31, 1919.
ASSETS.		
	<i>Marks.</i>	<i>Marks.</i>
Gold coin and bullion.....	2,252,200,000	1,089,500,000
Silver coin and bullion.....	638,264	9,756,833
Loan bank notes.....	5,730,000,000	10,993,000,000
Treasury notes.....	3,600,000	32,000,000
LIABILITIES.		
Circulation of Reichsbank notes.....	22,187,000,000	35,698,000,000
Circulation of loan bank notes.....	10,242,000,000	13,781,000,000

The bank's ratio of gold to its own notes in circulation declined from 10.2 to 3.1 per cent during the year.

The bank's earnings for the year totaled 4,263 million marks, an increase of about 3,500 millions over the 1918 amount. These large profits are due to the sale of nearly half of the bank's gold and to the fact that the bank discounted a steadily growing amount of treasury bills.

NOTE.—The Darlehnskassenscheine (loan bank notes), according to Federal Reserve Bulletin, September 1, 1919, are not a direct liability of the Reichsbank, but are issued by special loan banks working under the general direction and supervision of the Reichsbank and are supported by Government war securities or by industrial obligations, also by stocks of goods, so that the gold in the vaults of the Reichsbank is the only gold reserve in existence against the aggregate circulation of both Reichsbank notes and loan bank notes.

FOREIGN MONEY HELD BY GERMANY.

[From *L'Economiste Europeen*, Apr. 18, 1919.]

On December 31, 1918, the Reichsbank held 13,218,000,000 marks in foreign money, this sum being an increase of 5,230,000,000 marks over the figure for 1917.

NOTE CIRCULATION.

[From *L'Economiste Europeen*, Feb. 21, 1919.]

The Frankfurter Zeitung is alarmed over the constantly increasing amount of notes in circulation, which may lead Germany into a desperate situation. The Reichsbank notes now in circulation amount to 22,000,000,000 marks (\$5,240,400,000), those of the loan banks amount to 10,000,000,000 (\$2,382,000,000), and those of the municipalities amount to 3,000,000,000 (\$714,600,000), making a total of 35,000,000,000 marks (\$8,337,000,000). Thereto must be added about 4,000,000,000 (\$952,800,000) of notes which Germany issued in the formerly occupied regions, and which she will have to redeem. The reserve has fallen from 54.3 per cent to 10.2 per cent.

NOTE.—In the same column of the *Economiste Europeen*, Dr. Schiffer, the secretary of the treasury, is quoted as stating before the Weimar Assembly: "Just a word regarding the note circulation. Against a circulation of 2,000,000,000 marks (\$476,400,000) in 1914, we now have 43,432 millions of marks (\$10,345,502,400) in circulation, without counting the notes issued by the communes."

REICHSBANK 50-MARK NOTES WITHDRAWN FROM CIRCULATION.

[From *Commerce Reports*, Nov. 3, 1919.]

Finance Minister Erzberger recently stated before the German National Assembly that there were known to be 59 different counterfeit imitations of the Reichsbank 50-mark notes in circulation. The Reichsbank decided some time ago to withdraw all of its 50-mark notes and to replace them by a new issue. This exchange was to take place, in so far as possible, before September 10, 1919. After that date these notes ceased to be legal tender and became exchangeable only at the Reichsbank itself. After September 10, 1920, the old notes will no longer be recognized by the Reichsbank. Apparently the bank has been flooded with these notes during the past few days, for it has issued a notice calling attention to the fact that a whole year still remains in which to exchange the old notes for new ones. Attention is also called to the fact that the local banking institutions which have accounts with the Reichsbank will also undertake to exchange notes for their clients, and that this method is preferable to the sending of the notes direct to the Reichsbank in Berlin.

COINAGE OF FRACTIONAL MONEY.

[From *L'Economiste Europeen*, Paris, Dec. 5, 1919.]

The Government of Germany has decided to suppress as soon as possible circulation of the various kinds of paper money issued by the different cities. To that end it has ordered the coinage of large quantities of 50, 10, and 5 pfennig pieces.

According to official reports, the coinage of 50-pfennig aluminum pieces will amount to 50,000,000 marks; of 10-pfennig zinc pieces, 10,000,000 marks; and of 5-pfennig iron pieces, 3,000,000 marks.

VALUE OF GERMAN MARK.

[From the *Numismatist*, January, 1919.]

It is reported from London that the value of the German mark has fallen below 42 to the British pound. Before the war the mark was worth approximately 1 shilling, or 20 marks to the pound. At Copenhagen on December 1, 1918, 42.28 marks could be obtained for 1 pound sterling; at Christiania, 42.08 marks for a pound; at Stockholm, 41.5, and at Berne, 41.083. At Stockholm the rate of exchange on the Austrian krone has fallen to 77.20 to the pound sterling.

CIRCULATION OF PAPER MONEY.

[From the *Commercial and Financial Chronicle*, New York, Feb. 14, 1920.]

From the New York Evening Post of February 7 we take the following special correspondence to it from Geneva, January 17.

"The quantity of bank notes circulating in Germany increased during 1915 by 1,900,000,000 marks, during 1916 by 1,200,000,000, during 1917 by 3,400,000,000, during 1918 by 10,700,000,000, and finally in the first year of 'peace' by 13,500,000,000. As in the war the German mark was not only circulating in Germany but also in Alsace-Lorraine, all parts of Poland and western Russia, Belgium, and Roumania,

the increase in German bank notes in 1919 concerned a territory two-thirds as large as in the previous years. In view of this inflation it is no wonder that no stability in the value of labor and commodities can be achieved in Germany.

"During the war the circulation of 'darlehenskassenscheine,' an emergency money, chiefly covered by war-loan scrip given as collateral for individual loans, amounted to 9,800,000,000 marks. During 1919 a further 3,400,000,000 darlehenskassenscheine were issued, thus bringing the total circulation of paper money in Germany to more than 50,000,000,000. More than one-third of it—namely, 17,100,000,000—was issued in 1919, making the monetary situation worse than at the end of hostilities. The whole scheme of feeding the townfolk with home-grown money falls to pieces when, owing to the sinking value of the currency, the German agriculturist refuses to sell his goods at prices sinking daily deeper below the world market price of his commodities."

GIBRALTAR.

NOTE.—Coinages for certain colonial Governments, etc., were also executed by the branch mints and Indian mints.

The royal mint has no knowledge of the exact amount of gold and silver coin which may have been used for industrial purposes during the year 1918. It is estimated, however, that the gold bullion used for that purpose was about 700,000 fine ounces (\$14,470,284); and the silver bullion about 7,500,000 fine ounces (\$7,383,450).

No returns are kept showing separately the imports of United States currency.

The domestic production of silver obtained during the year from siliceous, lead, and copper ores was 2,477 fine kilograms (79,636 fine ounces), valued at £15,784 (\$76,813).

¹ No figures available.

² Official estimates.

The official quotation for gold throughout the year remained at 77s. 9d. per standard ounce.

LAWS AFFECTING THE CURRENCY.

By royal decree of April 13, 1918, the 1-rupee notes issued by the Government of India under the authority of the India paper currency act, 1917, were declared for all purposes legal tender in East Africa and Uganda and equivalent to the standard coin.

By royal decree of May 18, 1918, the fineness of the Straits Settlements silver dollars and half dollars was reduced from 900 to 600 and the tolerance from 0.005 to 0.003.

By decree of May 18, 1918, trading in current-silver coin and purchase or sale of same at a premium was prohibited.

By decree of August 2, 1918, the maximum price of silver bullion was fixed and purchase or sale of same, except under written license from the treasury, prohibited.

REVIEW OF THE GOLD AND SILVER SITUATION.

[From the Mining Journal, London, Mar. 29, 1919.]

Since last week the movements in international exchange have become more marked and have occasioned some discussion. Mr. Bonar Law, in speaking to the trades-union delegates on Saturday, pointed to the Government inability to continue arrangements to maintain the sterling exchange in New York as a significant feature of our financial position, implying that the cabinet were withdrawing the support more of necessity than from conviction that the course was desirable. As matters stand to-day, it is difficult to discern any price unit. Relative to gold the dollar has depreciated, though not so much as the sovereign, which again is less affected than the franc and the lira. In Germany food purchases from the United States have had to be paid for in gold to the tune of, it is said, £11,000,000, indicating that as between countries where no desire or necessity exists for mutual assistance gold is still the only acceptable medium of payment other than barter. Following on the conferences on various aspects of the gold question in the United States, the subject was tackled recently by the Australian Gold Producers' Conference, when it was pointed out that for some time past there had been a strong demand for gold in China at from 110s. to 120s. per ounce; and that negotiations between the Bendigo Amalgamated Gold Fields and a Chinese firm had resulted in an offer to take 5,000 ounces monthly from Bendigo at a premium of from 32 to 37 per cent, corresponding to variations in the quotations over a certain period. A letter was also read from an Indian bank stating that bar gold was worth 50 per cent more than currency values, but that the position there was complicated by the fact that since August last Government had taken over all imports and was seeking to prohibit dealing in gold coin at a premium. Reference was also made to the premium charged by the British Government and the Bank of the Netherlands for supplies of gold released for manufacturing purposes. The position, therefore, seems to be that by substituting currency for gold as a unit of value gold becomes for the time being a commodity and rises in value like any other commodity for which the demand exceeds the supply. If we still continue to think in terms of gold as a unit, we can put it that currency has everywhere depreciated, though naturally in different proportions. The question which now begins to claim attention is whether the British Government is going to allow free exports of gold. If not, gold producers within the Empire will seek to dispose of their gold to countries which will pay its intrinsic value. Already it is reported that the Rand will sell in America, and that the prospect may lead to the subsidy issue being reconsidered.

SILVER.

The complex effects of the suppression of gold by a paper currency is being strikingly illustrated in the case of silver. Although the price is unchanged in New York at 101½, a Government order issued this week places dealers in this country in the happy position of once more having a speculative market in which to operate. As from the date of the order, the maximum price for silver bullion in the United Kingdom shall be such price as is equivalent at the current rate of exchange to 95 cents per standard ounce. Operators, therefore, will now be able to gamble on the dollar exchange in this country, the probable range of which is at present a matter of the widest differences of opinion. The effect of this development was that the price rose 1½ on Tuesday, and has fluctuated daily since, closing to-day 1½ up at 50d.

FREE MARKET FOR TRANSVAAL GOLD.

[From the Commercial and Financial Chronicle, New York, July 26, 1919.]

London cablegrams, July 24, stated that a free market for gold produced by the mining companies in the Transvaal had been reestablished by an agreement signed that day by the Bank of England and representatives of South African gold mining companies. The action removes restrictions on the export of gold which existed during the war. The agreement, it is understood, has the sanction of the Imperial South African Government.

It now is possible, it is stated, for gold to be purchased in England through the usual channels for shipment abroad. An experimental sale of 50,000 ounces of gold for shipment to America was made by Transvaal companies at a price of 85s. 6d. (\$20.81) for a standard ounce. Until now the price has been 77s. 9d. (\$18.92) an ounce.

Concerning the revival of the free gold market, a London special cablegram, July 24, said in part:

A rise of about 10 per cent in the price of gold is expected as the result of the reestablishment of the free market for the sale of precious metals produced by the South African companies. An agreement between the Bank of England and the representatives of the gold mining companies of the Transvaal has now been signed. This concession has been made to the mining companies to enable them to sell their gold in the best market and thereby get a better price for it in order to place them in a more advantageous position to meet the rising costs of production.

During the war the export of gold abroad had been prohibited and the producers had been under obligations to sell to the bank at a fixed price. The agreement arrived at means that the restrictions on sales abroad of this gold have been removed.

The American market is considered the most favorable for the sale of gold. Owing to the depreciation of the pound sterling the price obtained will necessarily vary as exchange fluctuates. It is possible that this restoration of the free gold market will help the situation meanwhile and at the same time stimulate the production of gold, which is also essential.

HIGH PRICE OF SILVER.

[From the Statist, London, May 17, 1919, p. 873.]

As we were going to press last week, and after business hours, it was announced that the Government had removed its control of the silver market to the extent that it no longer fixed prices. The market was also informed that, although for the present, at any rate, export license would be required, no serious obstacles would be placed in the way of bullion dealers desirous of obtaining it. The result was a rapid rise in the price of silver to 58d. per ounce, a figure which has not been reached for a period of more than 40 years. Owing to the fact that speculation in silver has been so long forbidden in this market, there were no stocks available, and, in order to meet a sudden demand for the Continent, brokers and dealers found it necessary to offer tempting prices to those who were able to obtain silver from overseas, mainly from the United States of North America. The price of silver to-night closes at 54d. per ounce.

GOLD MOVEMENTS.

[From the Australasian Insurance and Banking Record, April, 1919.]

The British Board of Trade, it was cabled on March 29, announces the prohibition of the export of gold coin and bullion to all destinations. General licenses are being issued permitting the importation of any quantity of gold bullion.

THE PRICE OF GOLD.

[From the Mining Journal, London, May 17, 1919.]

The revival in Kaffirs this week was started by a report that an arrangement had been made by which the gold mines would receive the best price of the best market for their output. It would seem that the report was premature. At the meeting of the Ivanhoe Gold Corporation on Monday, Mr. Govett referred to the steps taken in Australia in connection with this matter. The Commonwealth Government in March sanctioned, for an experimental period of three months, the export of gold to the allied countries, and the Ivanhoe has been making some profit from this source. The amount was not mentioned, but mail paper reports that the Gold Producers' Association, which exports the gold, had realized a parcel of gold at something like £4 14s. per ounce (\$22.87 per ounce, or 10 per cent profit). The amount was said to be about £24,000 (\$116,796) and the profit, as compared with the price paid by the Federal Government, was £4,000 (\$19,466).

According to a statement in the Mining Journal, London, May 17, 1919, gold was obtainable on the market at the time for 103s. (\$25.06) per fine ounce, whereas the fixed price of gold is 85s. (\$20.67) per fine ounce.

EXPORTS OF SILVER COINS PROHIBITED.

[From the Commercial and Financial Chronicle, New York, Nov. 1, 1919.]

In the British House of Commons, on October 30, Austin Chamberlain, chancellor of the exchequer, announced that an order had been issued making illegal the melting or breaking up of silver coin currency. The export of British silver coins is prohibited and steps are being taken to prohibit the export of silver bullion except under license. The situation, the chancellor added (it is learned from Associated Press cablegrams), is being carefully watched, and he hoped further action would be unnecessary.

HIGH PRICES IN LONDON FOR GOLD AND SILVER.

[Consul General W. Stanley Hollis, London, England, Dec. 17, 1919, in Commerce Reports, Jan. 14, 1920.]

On December 11 both gold and silver rose to new high levels in London. The price of gold advanced to £5 11s. 3d. (\$27.07 at normal sterling exchange), as compared with the fixed mint price of £4 4s. 11½d. (\$20.67) per fine ounce, or at the rate of 77s. 9d. (\$18.91) per ounce for bullion or coin gold. The prices mentioned mean prices in paper currency.

Silver rose 2d. to 78½d. (\$1.56½) per ounce, the highest price on record. The advance was stated to be due, in the case of both gold and silver, chiefly to the fall in the value of the pound (paper currency) in the American market, which closed at \$3.70½, as compared with the normal United States Treasury rate for sterling of \$4.8665.

GOLD PRODUCTION OF THE BRITISH EMPIRE.

[From bullion letter of Samuel Montagu & Co., London, June 3, 1920.]

The department of public information at Ottawa gives the production of the British Empire in ounces as follows:

Source.	1919	1918
	<i>Ounces.</i>	<i>Ounces.</i>
South Africa.....	8,330,091	8,418,292
Australia.....	1,074,713	1,277,474
Canada.....	767,167	699,681
Rhodesia.....	585,700	624,000
India.....	461,171	485,236
West Africa.....	292,500	307,950
Other regions (estimated).....	175,000	200,000
Total.....	11,686,342	12,012,633

PAPER CURRENCY.

[From Samuel Montagu & Co., London, Apr. 10, 1919.]

The issue of currency notes in small denominations is proceeding apace. Notes of 5s. and 10s. value are about to be issued in Jamaica, and the Government of Mysore are considering the introduction of currency notes in that State.

Monetary situation in Ireland and Scotland, Dec. 27, 1919.

[From the Bankers' Magazine, London, February, 1920.]

Items.	Note circulation.	Metallic reserve.
	£	£
Total for Irish banks.....	30,532,435	25,859,471
Total for Scotch banks.....	28,705,345	28,136,393

Note circulation of the United Kingdom, Dec. 31, 1919.

[From the Bankers' Magazine, London, February, 1920.]

	£
Bank of England.....	86,998,129
Private banks.....	179,850
Joint stock banks.....	2,720
Total in England.....	87,180,699
Scotland.....	28,323,564
Ireland.....	30,638,573
Total for the United Kingdom.....	146,142,836

NOTE.—As compared with the corresponding period of last year, the returns show an increase in the Bank of England circulation of £21,136,100, and increase in private banks of £16,639 and a decrease in joint stock banks of £28,884; in Scotland an increase of £2,553,043 and in Ireland a decrease of £1,396,322, thus showing that the month ending January 3, as compared with the corresponding period last year, presents an increase of £21,123,855 in England, and an increase of £22,280,576 in the United Kingdom.

The returns of the Bank of England for the month ending January 7 give an average amount of bullion, in both departments, of £91,378,272. On a comparison of this with the return for the previous month, there appears to be an increase of £1,917,699, and as compared with the corresponding period of last year an increase of £11,825,157.

The average amount of coin held by the banks of issue in Scotland and Ireland during the month ending December 27 was £53,995,864, being an increase of £621,985 as compared with the returns of the previous month, and an increase of £1,553,198 as compared with the corresponding period of last year.

ISSUANCE OF "STRIKE TREASURY NOTES" IN IRELAND.

[From the Commercial and Financial Chronicle, New York, Apr. 26, 1919.]

The following account of the issuance of Irish treasury notes by the strikers in Ireland, is contained in Associated Press advices from Limerick April 21:

"The general strike here, incident to the proclamation of Limerick as a military area, assumed a new phase to-day when the finance commission of the Limerick Trades and Labor Council announced that it was preparing to issue its own money in the form of 1-shilling and 10-shilling notes, which would be used in the purchase of food for the 14,000 strikers.

"The money is called 'Strike treasury notes,' and is secured by the stock of food which it is proposed to purchase with the financial gifts reaching Limerick from other parts of Ireland and by the 'integrity of the workers of Limerick.'

"The announcement of the new financial scheme was made by Tom Johnson, treasurer of the Irish Labor Congress, who announced also that the food commission

of the Labor Council had arranged for supplies for the city. This food will be assembled in the warehouses in Limerick and sold to merchants, who will distribute it under the direction of the Labor Council at fixed prices which do not permit of profiteering."

The notes are printed in different colors to show denominations. Those of 10 shillings are inscribed as follows:

General strike against British militarism April, 1919. The Limerick Trades and Labor Council promise to pay bearer 10 shillings.

LIMERICK TRADES AND LABOR COUNCIL,

_____,
Chairman.

_____,
Treasurer.

The total amount of the issue has not yet been determined, but the printing processes are already at work.

GREECE.

The estimated quantity of silver used in the industrial arts during the year ended December 31, 1918, was 200 fine kilograms (6,430 ounces).

The production from lead ores during the year 1918 was: Gold, 9.823 fine kilograms (316 ounces); silver, 5,443.690 fine kilograms (175,015 ounces).

Stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1918.

THE MONETARY SITUATION.

[Consul General Alexander W. Weddell, Athens, in Supplement to Commerce Reports, Nov. 6, 1919.]

In the five-year period, 1913-1918, bank notes in circulation have shown a great increase, the amount in 1913 reaching \$59,946,607, as compared with \$271,462,875 at the close of 1918. More than a third was covered by book credits of the United States, Great Britain, and France under the loan agreement of February 10, 1918, under which the Hellenic Government is authorized to draw credit for six months after the conclusion of peace. The inflation existing will thus be gradually corrected, since the credits in question can only become available through commercial transactions which will represent a corresponding reduction in the paper currency of the country.

The extent of the monetary circulation of Greece is established by the basic law of 1910. The mechanism of this law is very simple. Instead of covering bank notes in circulation on the basis of a certain percentage of deposits this circulation is represented entirely by deposits in foreign banks, without excluding additional notes covered by a gold deposit in the issuing bank. A direct advantage of this system is that the capital designated to cover the notes in circulation is productive, interest being paid on the deposit abroad, and indirectly serving as a guaranty of the paper money of the country and for the production of wealth. Furthermore, under this arrangement the bank's circulation is entirely covered, instead of being on the basis of a percentage of deposits, and exchange is also stabilized. Another feature of the system is its flexibility and the fact that the circulation may be increased with the increase in national savings abroad.

A striking feature of the past two years in Grecian finances has been the stability of foreign exchange. This may be ascribed in large measure to the gradually increasing difficulties attending purchases abroad; to the blockade enforced by the Allies, when only the bare necessities of life were allowed to come in; to the enormous profits of the merchant marine of Greece, and to the other factors aforementioned; to large expenditures made in 1917 by the Great Army, then in process of mobilization; to the severe control exercised by the Government over all remittances abroad, under the provision of the law of 1910 previously cited; and to the agreement with the United States, Great Britain, and France, under the arrangement of February 28, 1918, which contained a distinct pledge in this sense of stabilizing exchange.

Furthermore, at the beginning of the war, large sums were held abroad under the control of the National Bank of Greece. These were in large measure in banks in the United States, Great Britain, and France, but limited amounts were lodged in Germany and Austria. With the beginning of the fluctuations in exchange between the pound sterling and the dollar and the franc, the National Bank of Greece, instead of fixing the rate of exchange on the basis of the supply and demand in Greece (as was the case in other neutral countries), undertook to regulate the price of exchange on England and France on the basis of the parity of the American dollar, in the country of which currency Greece had already large deposits.

At the close of the year English bank notes were being exchanged at the rate of 25 drachmas to £1, practically a par rate, and French notes at a rate of 97 drachmas to 100 francs, only a 3 per cent loss. French, Belgian, and Swiss silver was accepted at par. Greek bank notes maintained their par value, but Greek gold was not in circulation, while European gold specie was at a premium of 40 per cent. Local bankers say that the value of the American dollar has followed more or less the quotations of Paris and London. By a decree of the Government, issued in 1917, transactions in gold and even quotations on gold were forbidden under penalty.

THE NOTE CIRCULATION.

[From the Bankers' Magazine, New York, June, 1920.]

The total issue of notes according to the law of 1910 amounted on December 31, 1919, to 1,194,000,000 drachmas. The national-bank notes issued inclusive of the notes of 1910 on the above date were 1,401,300,000 drachmas, against 1,379,000,000 drachmas. With the Ionian Bank's notes of a maximum of 7,000,000 drachmas and the Government's notes of 30,659,000 drachmas, we arrive at the total of 1,438,959,000 drachmas (\$277,719,087), notes of any category issued in Greece to January 13, 1920, against 1,406,736,000 drachmas (\$271,500,048) of last year. The total money increase within 1919 amounted to 2½ per cent.

NOTE.—Greece is one of the financially healthier countries of Europe. Her public indebtedness is small in comparison to the debts of the other European ex-belligerents. The paper circulation of the national bank, the only bank of issue, possesses a cover of 87.85 per cent in foreign exchange. Not comprised therein is the gold in the vaults in the bank.

HUNGARY.

PREMIUM ON GOLD.

[From the Mining Journal, London, Mar. 22, 1919.]

By a recent ordinance of the Hungarian Government, the premium payable on exchanging paper money for gold is raised 200 per cent. Thus for the payment of customs duty in bank notes the amounts are double.

FINANCIAL DIFFICULTIES IN HUNGARY.

[From L'Economiste Europeen, May 16, 1919.]

A decree of the Soviet Government, published in Hungarian papers May 6, 1919, makes it obligatory for everybody to accept the 25 and 200 kronen notes of the Austro-Hungarian Bank.

The notes in question are no longer issued, and they are not even recognized by the Austro-Hungarian Bank. They are issued and put into circulation at Budapest by order of the People's Commission of Finances, which has the press of the Karolyi Government.

The Hungarian Soviet Government has taken possession of all the wealth of the country (real and personal), and has thus improved the financial situation of the Republic. The Pester-Lloyd proceeds: The Soviet Government has provided a real cover for the notes in circulation in Hungary. This cover consists of large quantities of jewels, coins, foreign securities, and foreign bills which the Government has communized.

FIDUCIARY CIRCULATION.

[From *Moniteur des Interets Matériels*, Brussels, July 16, 1919.]

According to the Italian press the total paper currency in circulation on December 31, 1918, was 11,999,000,000 of lire. Since then, however, the issue of paper money for commercial use has shown a considerable decrease, whereas the issue for the account of the Government has increased by about 1,000,000,000 lire. Of this increase, about 305,000,000 of lire are for the settlement of war expenses and 630,000,000 for expenses in invaded and liberated territories. The major part of the latter sum has been used to replace the Austrian paper money which has been withdrawn from circulation.

TRANSFER OF ITALIAN FUNDS ABROAD PROHIBITED.

[Trade Commissioner H. C. MacLean, Rome, Sept. 28, 1919, in Commerce Reports, Nov. 6, 1919.]

In view of the extreme depreciation of the Italian lira abroad, by royal decree dated September 11, 1919, the Italian Government has prohibited the making of any loans or investments of Italian capital outside of the Kingdom and its colonies, except in special cases where permission is granted by the Minister of the Treasury. The decree in question provides that capital employed abroad contrary to its provisions will be subject to a special tax of 25 per cent. It is the intention of the Government that no Italian funds shall leave the country except for making necessary purchases.

NICKEL COINAGE.

[From the Numismatist, February, 1920.]

The International Nickel Co., of New York, has been making regular shipments of nickel disks to Italy since last May. It is reported that these are to be used by the Italian Government for the manufacture of a new coin of either 20 or 25 centesimi.

JUGOSLAVIA (THE KINGDOM OF THE SERBS, CROATS, AND SLOVENES).

Stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1919.

United States equivalent.....	\$19,493,000		\$436,662,500	\$456,155,500

¹ No statistics, even approximate, are available of currency or notes held abroad.

² The exchange of Austro-Hungarian kronen notes for the new Jugo-Slav dinar-kronen notes took place at the beginning of the present year (1920). At the end of the past year the circulation was 6,350,000,000 Austro-Hungarian kronen notes (equal to 1,562,500,000 dinars, at the rate of 4 kronen to 1 dinar) and 700,000,000 dinar notes of the Serbian National Bank.

There are now (July, 1920) 2,720,000,000 Government dinar bank notes (the new dinar-kronen bank notes; 1 dinar equaling 4 crowns) in circulation and 700,000,000 in addition to this, being the old dinar bank notes (issued before the war by the national bank).

PREMIUM ON GOLD FOR 1919.

Highest, 24.20 dinars; lowest, 7.50 dinars; average, 12.43 dinars.
The actual currency of the country is bank notes.

LAWS AFFECTING THE CURRENCY.

On November 7, 1919, the Prince Regent signed a decree providing for the stamping by the Government of crown notes in circulation within the Kingdom issued by the Austro-Hungarian Bank, and providing furthermore that the Government should retain 20 per cent of the crown notes so stamped.

NEW CURRENCY.

[From Samuel Montagu & Co., London, June 12, 1919.]

Novel modern denominations of currency are being created by new States now called into existence. For instance, the Jugo-Slav Kingdom is replacing the Austrian kroner notes in circulation by bank notes expressed in "dinars," the nominal value of which will be decided at a later date.

MONETARY SITUATION.

[Minister H. Percival Dodge, Belgrade, Oct. 27, in Commerce Reports, Dec. 9, 1919.]

It is authoritatively stated that the dinar currency in circulation is well covered, but that the Austrian crowns in circulation are entirely uncovered. It is estimated that at the present time there are in circulation between twelve and thirteen billions of crowns.

THE CREATION OF A JUGO-SLAV NATIONAL BANK.

[From the Bankers' Magazine, London, February, 1920.]

Reuter's Belgrade correspondent, in a cable dated December 23, reports that at an extraordinary meeting of the shareholders of the Serbian National Issue Bank, which was held recently, it was decided to extend the scope of the bank under the title of the National Bank of the Kingdom of the Serbs, Croats, and Slovenes. A new board of directors was elected and is composed as follows: M. Voya Velkovitch, minister of finance; M. Dragotine Protitch, lawyer; Count Culmer, a deputy of Agram; M. Montchilo Nitchitch, former minister of finance. The meeting authorized the directorate to apply the new banking bill, which is now before Parliament, as soon as the bill is passed. The bank is to have a nominal capital of 50,000,000 dinars in gold, divided into 5 series of 20,000 shares. The State is to hand the bank 30,000,000 dinars as metallic security for the issue of new bank notes. The bank accepted this commission from the State, but declined to accept any eventual risk involved by the fluctuation of the exchanges. The new notes will be considered as legal tender. The national bank is to be allowed to issue bank notes to a sum equal to three times the amount of the metallic deposit it holds, and may exceed this limit for the issue of notes (at present from 250,000,000 to 400,000,000 dinars) in proportion to its capital. The exchange of dinars and kronen will be continued under the present condition until the end of February.

NOTE.—At normal exchange the dinar=\$0.193.

REPORT OF THE NATIONAL BANK OF THE SERBS, CROATS, AND SLOVENES.

[Chargé d'Affaires ad interim J. W. Carroll, Belgrade, Serbia, in Commerce Reports, June 16, 1920.]

The Politika of Belgrade in March published an item on the National Bank of the Kingdom of the Serbs, Croats, and Slovenes, from which the following data are taken:

"The report of the bank, ended January 31, 1920, shows a circulation of the notes of the bank of 711,000,000 dinars. The collateral of the bank in metal was 12.6 per cent (63,300,000 gold, 15,500,000 silver, and 10,000,000 in foreign currency), and if foreign credits and checks be added, 352,700,000 francs. The collateral for the notes was 62.5 per cent. The State's debt to the bank was stated to be 649,700,000 dinars, and since the money owing to the State was 388,900,000 dinars, the debt without collateral was 260,800,000 dinars. The greater part of the latter (247,800,000 dinars) was stated to be on the provisional report of exchange without interest, while the remainder (13,200,000 dinars) is based on national bonds with 2.5 per cent interest. Compared to the total assets of the bank, namely, 1,338,813,805 dinars, this debt represents an imposing figure. In comparison with other countries, however, Jugoslavia has demanded relatively little of its national bank, which was formerly the National Bank of Serbia. Coincident with its change of name, the condition of the bank has changed considerably. The operation of changing the crowns alone raised the circulation to 1,500,000,000 dinars, and together with the old notes, the circulation will be over 2,000,000,000 dinars. But considering the population and wealth of the country, the situation of the bank is to be considered favorable."

JUGO-SLAV CURRENCY.

[Consul Kenneth S. Patton, Belgrade, June 24, 1920, in Commerce Reports Aug. 16, 1920.]

According to the Ministry of Finance, the importation of Austro-Hungarian crowns into the new Kingdom of the Serbs, Croats, and Slovenes was prohibited on December 12, 1918, and this prohibition immediately became effective. At the Ministry of Commerce it was stated that there were no regulations in this country which would prevent a Jugo-Slav bank from honoring a draft drawn by an American bank upon a bank in Vienna, and payable to a Jugo-Slav bank or a Jugo-Slav citizen. The American exchange rate for Jugo-Slav crowns on July 26, 1919, was 37.63 crowns for a dollar; on November 20, 1919, it was 54.64; and to-day it is 72 crowns for a dollar.

Upon the constitution of the new Kingdom of the Serbs, Croats, and Slovenes the crown was the normal medium of exchange in those Provinces which had formerly been under Austro-Hungarian domination. These crowns were identical with the Austro-Hungarian crown notes, but were immediately stamped by the Jugo-Slav Government, and only such stamped notes were permitted circulation in the new Kingdom. Early this year the stamped Jugo-Slav crowns were withdrawn from circulation, and new notes, known as dinar-crown notes, were issued against them. The new notes bear, on their face, their value in crowns and in dinars, at a ratio of four crowns to one dinar.

NETHERLANDS.

Coinage executed during the year ended Dec. 31, 1918.

Denomination.	Pieces.	Value.	
Silver:		<i>Guilders.</i>	<i>U. S. dollars.</i>
25 cents.....	6,000,000	1,500,000	603,000

LARGE INCREASE IN GOLD STOCK OF THE BANK OF THE NETHERLANDS.

[Consul General Soren Listoe, Rotterdam, in Commerce Reports, Sept. 10, 1919.]

The gold stock of the Bank of The Netherlands, which at the outbreak of the war amounted to only 162,000,000 florins (\$65,124,000), has now (July 30, 1919) reached a total of about 710,000,000 florins (\$285,420,000). This increase of the gold supply

by about 550,000,000 florins (\$221,100,000) will enable The Netherlands to replenish its present diminished stock of commodities after the war.

The expansion of the money market also enabled the Dutch banks to make numerous home loans, such as those to the State, various municipalities, new enterprises, and to existing companies desiring to expand and increase their capital.

All these diverse loans, nominally amounting to more than 1,000,000,000 florins (\$402,000,000), were placed with ease. A large number of the banks also proceeded to increase their capital in order to maintain a proper proportion between their liabilities and their share capital.

NORWAY.

PROLONGATION OF ACT OF 1916.

[From Samuel Montagu & Co., London, Mar. 20, 1919.]

The Norwegian Storting has expressed approval of the prolongation of the act passed in 1916 exempting the Norges Bank from the purchase of gold. The minister of finance stated that the bank had exercised their discretion to purchase gold when considered desirable; he added that the stock of gold would be increased shortly by the repayment of advances which Great Britain had agreed to return in the form of gold.

GOLD COINS WITHDRAWN FOR USE IN ARTS.

[Consul General Marion Letcher, Christiania, Dec. 13, in Commerce Reports, Jan. 24, 1920.]

Recent reports show that during the period from July, 1918, to November, 1919, the gold holdings of the Norwegian State Bank have decreased by 2,000,000 crowns (\$536,000). This report is of interest in view of the present embargo on the exportation of gold. The decrease in holdings is attributed to the withdrawal of gold coins from circulation by dentists and goldsmiths for industrial uses.

POLAND.

STRANGE VARIETY OF NOTES IN CIRCULATION.

[By F. A. Vanderlip, in the Commercial and Financial Chronicle, New York, May 31, 1919.]

Some of the European nations have a variety of currency at the present time that is almost laughable, except that it is horribly serious.

Take the situation in Poland, for example, and Poland was a great manufacturing district about Warsaw. When the present government was formed, this country, made out of a piece of Germany and a piece of Russia and a piece of Austria, had first a currency of the old Czar rubles and the Kerensky rubles and the Bolshevik rubles, and Bolshevik counterfeits of the Czar rubles and the Kerensky rubles; and there were German marks and an issue of marks that Germany forced the Warsaw district to make; and then, worth least of all, perhaps, were the Austrian kronen, with three-eighths of 1 per cent of gold back of them. That Government had to consolidate in some way this terrific mass of currency, and the difficulties that has thrown upon getting things started there would in themselves be almost enough to bring about the paralysis that is found there. But the currency situation in other countries, while not quite so intricate, is almost equally involved.

MONETARY SYSTEM FOR POLAND.

[From *Moniteur des Interets Materiels*, Brussels, July 13, 1919.]

The Polish Diet has a proposal to establish the monetary system of Poland on the following basis: The monetary unit, based on gold, shall be the zloty, which is divided into 100 groszys and resembles the franc. A kilogram of gold, 900 fine, will yield 3,100 zlotys. There will be 20 zloty and 10 zloty gold coins, called, respectively, ducats and half ducats; 5 and 2 zloty silver coins, 900 fine; 20 groszy nickel coins, and 10, 5, 2, and 1 groszy iron coins.

A POLISH STATE BANK.

[From the *Bankers Magazine*, London, July, 1919.]

The following message, dated May 21, has been received by the Polish information committee: The Polish Diet is discussing the bill introduced by the minister of finance proposing the establishment of the Bank of Poland. The bill states that, in order to stabilize the currency, to regulate the money transactions on all the Polish territories, and to supply the general needs of the country, a State bank, under the name of the Bank of Poland ("Bank Polski"), is being established in Warsaw. The nominal capital of the Bank of Poland is to be fixed at 100,000,000 zloty (1 zloty=1 franc nominal). The treasury transfers to this purpose donations given to the national treasury, immovables left within the frontiers of Poland by the Russian State Bank the balance resulting from the liquidation of the Polish State Loan Bank, and the immovables left in Poland by the Austro-Hungarian Bank and the German Reichsbank, after closing the accounts with those banks. The Bank of Poland will issue bank notes of 10, 50, 100, 1,000, and 5,000 zloty; until sufficient currency is introduced, the Bank of Poland has also the right of issuing small notes of 1, 2, and 5 zloty. The Bank of Poland will be allowed to grant loans to the State up to 3,000,000,000 zloty, in return for the transfer of short (maximum six months) treasury obligations, and for the marks, crowns, and roubles withdrawn from circulation.

THE POLISH STATE BANK.

[Trade Commissioner Louis E. Van Norman, Warsaw, May 20, in *Commerce Reports*, July 17, 1920.]

The Polska Krajowa Kasa Pozyczkowa is the national bank of Poland. It is not under the direction of the minister of finance, but is a separate Government bureau, although the minister of finance appoints the director. It has all the departments and performs all the functions of a banking business, besides being invested with the duty of issuing the paper currency of the country. It has 40 branches in different cities, and a personnel of between 3,000 and 4,000, of which about 1,000 are in the Warsaw central bank.

FIDUCIARY CIRCULATION OF THE STATE BANK OF POLAND.

[From *L'Economiste Européen*, Paris, Dec. 12, 1919.]

	Marks.
Notes in circulation on Nov. 11, 1918.....	880, 151, 000
Notes put into circulation since.....	2, 840, 339, 000
Total notes in circulation on Oct. 31, 1919.....	3, 720, 490, 000

The Bulletin d'Information sur la vie économique polonaise, which publishes the above figures, remarks that it can not give the total amount of notes in circulation on the whole Polish territory, as there are nine different kinds. Besides the real Polish mark issued by the State Bank of Poland, there are the ordinary German mark; the so-called Polish marks issued by the Germans during the period of occupation; the unstamped Austrian crowns; the "hrivny" and "karbavancie," issued by the Ukrainian Government; the old Russian ruble, called "Romanoff"; the Douma ruble, called "Kerensky"; the German ruble, called "Ober-Ost"; and the Lithuanian mark guaranteed by Germany.

The above figures represent only Polish mark issued by the Polish Government and Polish mark issued by the Germans during their occupation.

According to estimates of the Bulletin d'Information, there are further in circulation in the Polish territory Austrian crowns to the amount of 5,000,000,000 marks; German marks, about 2,000,000,000; different kinds of rubles, between 3,000,000,000 and 4,000,000,000 of marks; moneys of Ukrainian origin, 500,000,000 marks.

POLISH CURRENCY SITUATION.

[Consul Harry A. McBride, Warsaw, Oct. 29, 1919, in Commerce Reports, Nov. 28, 1919.]

No definite monetary laws have been enacted in the new State of Poland. There are several projects now under consideration. Polish marks are in circulation in all parts of Poland except what was formerly Austrian territory (Galicia), where Austrian crowns are still used. The Polish Government is endeavoring to evolve a satisfactory scheme for unifying the currency of the country, but no definite step in this direction has yet been taken.

EXCHANGE RATES AND MONETARY SITUATION.

[From the Economist, London, Feb. 7, 1920.]

The exchange rates are now (Warsaw, Jan. 26, 1920) very unfavorable to this country. The pound sterling is quoted at about 500 marks, the dollar at 130, the French franc at 11, the Swiss franc at 25. Cheques on Berlin at 250 marks for 100 German marks. The causes of this fall are the adverse balance of trade, great war expenditure, and an incessant paper-money issue. The total of marks issued by the Land Bank is now over 5½ billions, and a gold pool of 6,000,000 marks is held to secure this paper money. The war expenditure is now about 600,000,000 marks monthly, and the greater part of foreign credit is used for war purposes.

POLISH MARK MADE LEGAL TENDER.

[Trade Commissioner Louis Van Norman, Warsaw, Jan. 31, in Commerce Reports, Mar. 22, 1920.]

The official organ, Monitor Polski, publishes the following decree of the Diet of January 15, establishing the Polish mark as the legal tender in all the territories of the Republic:

"ART. 1. The Polish mark is hereby made the legal tender in all the territory of the Republic.

"ART. 2. In those parts of the Republic where the Austro-Hungarian crown was used as legal tender, all payments are now to be made either in crowns or in Polish marks at the rate of 70 marks to 100 crowns.

"ART. 3. All payments in Austro-Hungarian crowns can be made in Polish marks according to the above rate.

"ART. 4. Any agreement in contradiction to these regulations with regard to payment due in crowns but paid in marks at a different rate than the current rate, or refusal to receive payment in marks, is prohibited.

"ART. 6. The decree goes into effect on the day of its first publication.

"ART. 7. The enforcement of the decree is intrusted to the minister of finances."

PORTUGAL.

Metallic reserve and note circulation of the Bank of Portugal.

Silver coin and bullion.....	53,919	36,325	31,856	37,244
Notes in circulation.....	147,106,571	280,180,501	378,535,219	480,405,045

Following is the comment made by the governor of the bank in his annual report: "Anxious to keep safe from any adventuality this gold stock which had been accumulated with so much diligence during so many years, our general council, with the approval of the Government, decided to transfer it from Bucharest to Jassy. Recently, taking advantage of the great kindness of the Government of His Majesty the Emperor of Russia, which placed at our disposal a special compartment in the palace of the Kremlin (Moscow), we, with the authority of the Government and conformably to the law of Dec. 25, 1916, removed thither the lei 314,580,456.84 (\$60,714,028) which we had in our treasury at Jassy. The rest of our metallic stock had already been deposited abroad, with the exception of the amount we have on hand."

ROUMANIAN EXCHANGE DIFFICULTIES.

[Commerce Reports, Jan. 28, 1919.]

An official in Roumania reports that now is the time to solicit business in that country, but he says it is necessary that the bankers of America, England, and France should establish the value of the Roumanian leu. He says to-day they receive at the highest 8 lei for \$1, but when the public wishes to buy the bankers charge from 12½ to 15 lei for the dollar; therefore it is difficult to do business under these circumstances.

THE GERMANS AND THE ROUMANIAN BANK NOTES.

[From L'Economiste Europeen, Paris, Mar. 7, 1919.]

The Government at Bucharest has been informed that the Germans are putting into circulation large quantities of bank notes illegally issued by the General Bank of Roumania during the German occupation. When the Germans evacuated Roumania they took the press with them, so that they can even now continue to issue Roumanian notes in Germany. The Roumanian Government has protested against this evil practice and declares that it will not recognize these notes.

The notes of the General Bank of Roumania are of a different design from those issued by the National Bank, which alone has the legal right to issue notes.

ANNULLING GERMAN BANK NOTES IN ROUMANIA.

[Commerce Reports, Feb. 3, 1919.]

According to the Hamburger Fremdenblatt, the Roumanian Government has instructed the ministry of finance to annul all bank notes given out by the German army of occupation, which amount to about 2,000,000,000 lei (at normal rate, \$386,000,000).

FINANCIAL CONDITIONS.

[Trade Commissioner Louis E. Van Norman, Bucharest, July 23, in Commerce Reports, Aug. 30, 1919.]

On account of its exceptional economic position, Roumania, in the opinion of competent observers, seems virtually certain to recover its financial stability sooner than any other of the Balkan nations and perhaps sooner than any of the nations of Europe, including the new ones which have grown up out of the war. Roumanian credit has always been good. The national obligations of the country have been secured by natural resources, perhaps surpassed by no other nation of the same size. This is demonstrated by the fact that up to the time of the Balkan wars the Roumanian national debt was held almost exclusively by the Roumanian people. There had been practically no borrowing abroad, although before these wars the German financial penetration had proceeded very far in Roumania.

Although there is no Government bank in Roumania, as the term is generally accepted in other countries, the National Bank of Roumania is permitted to issue national-bank notes to the extent of 30 per cent of its reserves, and the Banca Romaneasca, a bank with some national character, is granted special privileges.

When the Germans overran Wallachia, in the winter of 1916, and occupied the capital, they brought with them 2,500,000,000 lei in bills already printed, which were labeled to the effect that they were secured by reserves in the Imperial Bank of Berlin and issued by the Banca Generala Romana. With these bills the Germans paid for their so-called requisitions. The bills got into wide circulation in the country. The peasant, having more money than he ever had before, instead of producing food went into the towns in large numbers to buy things, thus aggravating the food crisis. It then became the problem of the Roumanian Government to safeguard the interests

of the masses of people by according, temporarily, a certain recognition to this, in fact, useless currency. This was accomplished by stamping the bills and by notifying the people that only stamped bills would be accepted. Just as soon as the frontier lines are decided by the Peace Conference the problem of using national resources as reserves for an issue of national currency will be taken under consideration.

RATE OF EXCHANGE FOR ROUMANIAN LEU.

During March, April, May, and June the rate of exchange for the Roumanian leu fluctuated considerably. In general, however, a fair average would be about 2½ to the franc, 44 to the English pound, and 13 or 14 to the dollar.

The Government has been making serious efforts to stabilize the leu. On June 1 it instructed the banks and other financial institutions with any national recognition to accept only the rate of 9.35 lei to the dollar. At the same time, however, private concerns and speculators were giving higher rates—that is, rates more unfavorable to the leu—at times giving as high as 15 lei to the dollar. This anomalous situation made business extremely difficult. The rate not only affected domestic trade, but made almost impossible transactions with foreign nations. It seems to be the general testimony of Americans in Roumania that there is not enough money in the country for the transaction of business.

RUSSIA.

GOLD STOCK AND PRODUCTION SINCE 1914.

[Extracts from an article by W. J. Novitsky, former assistant minister of finance of the All-Russia Government, published in the New York Times of July 4 and reprinted in the Commercial and Financial Chronicle, New York, July 24, 1920.]

The gold reserve in the vaults of the State Bank in 1914 amounted to the record figure of 1,601,000,000 rubles (\$823,714,500). The policy of concentrating the gold stock was facilitated by the good crops in 1909 and 1910, as well as the increasing gold production in Siberia from 1910 to 1913.

From the end of 1914 to early in 1917 Russia sold to England gold to the amount of £68,000,000 (\$330,000,000). Part of this went to England via Archangel, part to Japan, and part to Canada.

At the end of 1917 Russia delivered to Sweden for supplies gold to the amount of \$2,500,000.

In November, 1917, the gold reserve amounted to more than \$600,000,000, of which one half was stored in Samara and later in Kazan, the other half in Moscow and Petrograd.

After the treaty of Brest-Litovsk the Bolsheviks delivered from Moscow to Berlin \$160,000,000 of gold. This was later surrendered to the Allies and is now at the Bank of France.

In July, 1918, the Bolsheviks were forced to evacuate Kazan, leaving to the Czechoslovaks and consequently to the People's Government \$330,000,000 of gold. This gold was first removed to Samara and later to Ufa; it was later moved to Tcheliabinsk, where it was to be stored in the vaults of the State Bank, but the cars containing the gold found their way to Omsk. Admiral Kolchak later absorbed the People's Government. The balance sheet of the Omsk State Bank gives as a basic figure the amount of \$332,915,653.

In May, 1919, the Omsk Government shipped to Vladivostok \$144,076,719, of which \$21,773,722 was seized by Gen. Semenov and held in Tohita, \$22,753,538 was sold to the French Government, French and British firms, \$12,432,795 was sold to the Japanese, and deposits were made for operations of an Anglo-American syndicate \$46,835,277, for Japanese operations \$16,330,291, and for purchase of munitions in America \$2,177,372; the remainder, about \$21,700,000, was stored in the State Bank at Vladivostok; and when Kolchak evacuated Omsk there was left \$210,406,692 of the original \$332,915,653 of gold. On January 7, 1920, Admiral Kolchak was taken from Omsk to Irkutsk, where he was handed over to the Bolsheviks. The gold which was to accompany him was taken by the Czechoslovaks and later delivered to the Bolsheviks as per terms of armistice. Part of it was lost in transit.

Much of the gold produced in the country is not made a matter of record. Official data give the production for 1910 as \$38,855,000; 1913, \$40,433,000; and 1914, \$44,157,000; of which 80 per cent is Siberia's share and 20 per cent from the Urals. Since then Siberia alone produced \$32,660,000 in 1915 and \$21,774,000 in 1916; and, according to unofficial data available to the ministry of finance at Omsk, \$16,330,000 in 1917 and \$10,886,861 yearly in 1918 and 1919. The author estimates the actual production during these years at not less than 3,600 poods (about \$40,000,000) per annum, of which much fell into the hands of the Bolsheviks at Irkutsk.

The minister of finance has therefore definitely accounted for approximately \$846,900,000 of Russia's 1914 stock and subsequent production to the beginning of 1920, as follows:

Sold to England.....	\$330,000,000
Sold to Sweden.....	2,500,000
To Germany, by Brest-Litovsk treaty, now held by France.....	160,000,000
Seized by Gen. Semenoff and held in Tohita.....	21,773,722
Sold to French Government, French and British firms.....	22,753,538
Sold for Japanese operations.....	16,330,291
Sold to Japanese.....	12,432,795
Sold to Anglo-American syndicate.....	46,835,277
Sold to America for guns.....	2,177,372
Held in State Bank at Vladivostok.....	21,700,000
Held by the Bolsheviks.....	210,406,692
Total.....	846,909,687

The major part of the riches Russia had accumulated for centuries represents articles in silver rather than gold, as silver always enjoyed greater popularity than gold.

THE RUSSIAN GOLD RESERVE.

[From *Moniteur des Interets Matériels*, Brussels, Jan. 4, 1920.]

According to the *Svenska Dagblad*, Stockholm, December 28, 1919, an agreement has been reached at the Dorpat conference, whereby the Republic of Esthonia is to receive 1 per cent of the gold reserve of Russia.

The gold reserve of Russia, which before the revolution amounted to 1,800,000,000 rubles, now amounts to 1,000,000,000 rubles. Accordingly, Esthonia is to receive 10,000,000 rubles.

ESTIMATED GOLD PRODUCTION IN SIBERIA.

[From the *Far Eastern Review*, Shanghai, June, 1920.]

The following table shows the gold reported to the authorities as having been mined, and the amount that was retorted in the smelters and laboratories during the five years:

Year.	Reported (pounds, average).	Retorted (pounds, average).
1911.....	17,767.8	38,451.7
1912.....	15,958.1	37,148.2
1914.....	14,646.2	39,814.9
1915.....	16,755.9	44,314.2
1916.....	13,293.9	35,295.7

Even the statement of gold retorted does not indicate the full total won from the Siberian placers, since a large part was sent to Ekaterinburg and some went abroad, while the Chinese miners carried quite a wealth of treasure over the southern border. In addition, considerable gold hidden from governmental ken entered from the Transbaikalian region and it is probable that the Government report shows only one-third, perhaps only one-quarter, and estimates have been made that the total gold output from the Siberian placers is between 40,000 and 65,000 pounds a year with a probable average of close to 55,000 pounds.

GOLD MINING IN OKHOTSK DISTRICT, SIBERIA.

[Translated in the Russian Division, Bureau of Foreign and Domestic Commerce, from *Golos Rodiny*, Vladivostok, for Oct. 16 and Oct. 18, 1919, in *Commerce Reports*, Dec. 17, 1919.]

The gold-bearing fields of the Okhotsk district are extraordinarily large. Gold is found in the following river basins: Gusinka, Tukhtuya, Marekan, Tunguska, and Ulbei. The fields cover an area of several hundred square versts (1 square verst=0.44 square mile). In all of the basins mentioned gold is found in sufficient quantities to warrant exploitation and is only awaiting large interests that would be in a position to establish mining on a proper basis, not in a primitive fashion, as is being done at the present time. A special correspondent of the Russian Telegraph Agency toured over about 100 versts (66 miles) and investigated the gold content of the fields. The exploration of sand banks of the Tunguska, Ulbei, Ulbikan, Tukhtui, and Kukhteryak Rivers gave $1\frac{1}{2}$ to 3 doli (0.0021429 to 0.0042858 ounce troy) per tray; and considering

each tray as 1 pood (36.1128 pounds avoirdupois) of sand, 100 poods of sand yield 2 to 3 zolotniks (0.274294 to 0.411441 ounce troy) of gold. If this is the gold content of the sand banks that of the basic deposits (rock deposits) is undoubtedly much greater. In the excavated pits of the Varvarinsky mines, by the Tyutryumovsky Spring, a large deposit was discovered, more than 14 feet in thickness. In one of the pits of this mine $6\frac{1}{2}$ funts (55.583 ounces troy) of coarse gold sand was washed out from 2,744 cubic feet of sand. The excavated pits in the basin of the Gusinka River, commencing at Sukhoi Log, yield 40 zolotniks to 1 funt of gold (5.486 to 13.167 ounces troy) per 100 poods of sand. In this connection it should be mentioned that unsystematic mining destroys the gold deposits and leaves a good half of the gold in the ground. The Government interests require that gold be mined under normal conditions, which is impossible without a Government mining engineer on the spot to direct the work.

Literally speaking, rivers in the Okhotsk district have golden bottoms. Three men working in a primitive fashion in the winter wash out easily up to 5 funts (66 ounces troy) of gold a day. The Okhotsk deposits contain many nuggets. Nuggets weighing one-half funt are not rare. Last winter 1 zolotnik (0.137147 ounce troy) of gold cost 20 rubles; at the present time it costs 100 rubles. Ducks sold last winter at 3 zolotniks each, geese at 12 zolotniks, and onions at 1 zolotnik each. In spite of the rich deposits in this district, many concessions are not being exploited. The firm of Fogelman & Koltsov, which controls the best concessions, is the only one in full operation at the present time. The Tyuryusov mine is being worked and is also rich in gold. Gold is chiefly exported to Japan at very low prices. The following method is used: A Japanese having a fishing concession brings along manufactures and spirits from Japan and exchanges them for fur and gold. In the fall he ships the fish by steamer and carries away with him the purchased fur and gold. An American firm has explored the mine purchased from Stepanov and is energetically preparing to work it.

ECONOMIC CONDITIONS IN SOVIET RUSSIA.

[Translation from the Finnish Trade Journal *Mercator*, July 18, 1919, by Commercial Attaché Norman L. Anderson, Copenhagen.]

GOVERNMENT BONDS AS CURRENCY—PAPER MONEY IN CIRCULATION.

The Petrograd Soviet Government's official organ, *Severnaya Kommuna*, some time ago published a list of all Russian State bonds whose coupons will in the future be valid as lawful means of payment just as paper money. This measure is a natural consequence of the great lack of means of payment, which still persists in spite of a strained printing of paper money. As regards the amount of paper money in circulation, the Moscow paper *Gazeta Pechatnikov* states that it amounted to 55,263,000,000 rubles on January 1, 1919. At the end of the Kerensky régime, on October 25, 1917, the amount of notes in circulation amounted to 18,917,000,000 rubles. On January 1, 1918, it had increased to 25,461,000,000 rubles. The *Gazeta Pechatnikov* denies that there has been a constant and uninterrupted increase in the printing of notes, and gives the following table showing the amount of notes printed per month during 1918:

	Rubles.		Rubles.
January.....	2, 735, 800, 000	July.....	2, 042, 000, 000
February.....	1, 380, 700, 000	August.....	2, 454, 800, 000
March.....	2, 716, 100, 000	September.....	2, 270, 000, 000
April.....	2, 732, 400, 000	October.....	3, 353, 000, 000
May.....	2, 374, 800, 000	November.....	3, 067, 000, 000
June.....	1, 720, 700, 000	December.....	2, 960, 000, 000

As regards the amount of notes printed during 1919 there are no official statements, but *Pravda* states the average for January–March to be 2,500,000,000 rubles, and adds that the maintenance of this low figure, in spite of the great increase in the public expenditures, is to be attributed to the partial abolition of cash payments between State departments, the partial payment in kind of State officials, and the satisfying, though small, decrease in the expenditures of certain departments. According to this estimate the amount of notes in circulation should have amounted to 70,000,000,000 rubles at the end of June. But the Moscow writer, Vasilyev, *Golos Rodimyi* in Berlin, and other authorities estimate the amount to be between 85,000,000,000 and 100,000,000,000 rubles.

FINANCIAL CONDITIONS IN THE PROVINCES.

The amount of local issues of means of payment is growing rapidly, especially in south Russia. Vremya says that in Odessa, besides Czar, Duma, and Kerensky rubles (all issued by the central Government), there is now also in circulation the currency of the Don Republic (worth one-third of the Czar currency), the currency of the community of Odessa, and Odessa karatinki (from carat), based on the diamond value. After the occupation of Odessa the Bolshevik military authorities introduced a firm rate of exchange for these local currencies. In many places the central Soviet Government is struggling with the towns and Provinces which want financial independence. Though the budget for 1918 showed payments of more than 600,000,000 rubles from the central treasury to the local councils to cover the expenses for local administration, there is a great deficit in the local finances. The local incomes are nominally large, but, as a rule, they cover only part of the local expenses. Thus, the provincial council in Orel had an income of 93,000,000 rubles and an expenditure of 740,000,000 rubles. The corresponding figures for Tver were 73,000,000 rubles and 540,000,000 rubles and for Vladimir 38,000,000 rubles and 377,000,000 rubles. To cover these expenses some councils print Czar and Duma rubles, which, though not authorized by the Government in Moscow, are, of course, not worse falsifications than the Czar and Duma rubles printed in Moscow and Pensa for the central Government. Certain local currencies, which are often printed on different kinds of waste paper, have a value of 0.5 kopeck per nominal ruble, or 1/200 of the gold value. As these bank notes are printed in considerable quantities and for great values, such as 1,000 rubles, they are a great help to the heavily burdened local councils. But the official paper Pravda considers their production objectionable, like the vodka monopoly reestablished in some places and other measures taken by local Bolsheviks.

INCREASE IN ISSUE OF BANK NOTES AND SOCIALIZATION OF BANKS.

[From *Moniteur des Interets Materiels*, Brussels, Oct. 17, 1919.]

Before the revolution the total issue of bank notes amounted to 9,000,000,000 rubles. At the end of June, 1919, it was estimated at 140,000,000,000 rubles.

The banks were prosperous and had large metallic holdings at the time of the revolution. Now, the metallic holdings and deposits above 10,000 rubles have been confiscated and the banks have become mere branches of the People's Bank.

ISSUE OF SPECIFICALLY BOLSHEVIK MONEY.

[From the *Economist*, London, July 5, 1919.]

The Soviet Government has come to the momentous decision to print and issue henceforth its own specifically Bolshevik money. The *Izvestia Petrogradskava Sovieta* (No. 109) publishes a decree declaring that, for the purpose of gradually replacing the currency now in circulation, will be issued new credit notes for 1, 3, 5, 10, 25, 50, 100, 250, 500, and 1,000 rubles. These notes will for the present circulate on the same conditions as the "Tsar," "Duma," and "Kerenski" notes now in circulation. No comments on or explanation of this decree are yet to hand, but the Bolshevik Press contains other currency matter of interest.

BOLSHEVIKI COUNTERFEIT OF CURRENCY.

[By F. A. Vanderlip, in the *Commercial and Financial Chronicle*, New York, May 31, 1919.]

The theory of the Bolsheviks was that in their order of society there was no place for money. They saw it was difficult, however, to go on without money, and so they set to work to print so much money as to make money useless, but they went further than that. They wanted money for their propaganda purposes in other countries. They found no way so easy to get it as to make it. They have counterfeited the pound, the franc, the mark, the lire, the peseta, to what extent I am not able to say. That has been done. There is no question of that. Some of the English counterfeits have found their way to England, a good many were used in the Near East, because they liked pounds better there than rubles; and so the Bolsheviks supplied the pounds.

BOGUS UNITED STATES MONEY IN RUSSIA.

[From The *Washington Evening Star*, June 4, 1919.]

PARIS, Monday, June 2.—Large amounts of counterfeit American paper money are in circulation in soviet Russia, according to unofficial dispatches received here. French notes also are being counterfeited.

VALUE OF RUBLE IN SIBERIA.

[Cablegram from Consul John K. Caldwell, Vladivostok, Siberia, May 12, in Commerce Reports, May 22, 1919.]

The Vladivostok Chamber of Commerce at a general meeting on Saturday adopted a resolution petitioning the Omsk authorities to close all free ports temporarily against imports of foreign commodities.

The resolution aims at the increase of the exchange value of ruble currency. In the last week dollars have been sold here at 36 rubles and at Harbin at 39 rubles.

NOTE.—The nominal value of the ruble is \$0.51455.

FINANCIAL NOTES FROM SIBERIA.

[Consul D. B. Macgowan, Vladivostok, Aug. 14, in Commerce Reports, Oct. 11, 1919.]

The Vladivostok municipal administration is considering an issue of 10,000,000 rubles in notes of small denomination. There is a dearth of small change everywhere due partly to the wearing out of former issues and partly to hoarding and speculation. In some interior cities a premium of 25 per cent for small change is not uncommon, and the premium is said to have reached 100 per cent in some places.

According to the report of the Ministry of Finance, published June 1, 7,116,000,000 rubles in obligations of the Government treasury and 575,000,000 rubles in 5 and 10 ruble bills have been issued. Of this amount, 1,900,000,000 rubles is in the Government banks and 5,056,000,000 rubles in circulation.

MONETARY SITUATION OF SIBERIAN STATE BANK AT OMSK.

[From Russian Economist, Vladivostok, Sept. 2, in Commerce Reports, Nov. 19, 1919.]

The total amount of paper money in circulation in Siberia on August 1, 1919, was 5,902,777,000 rubles.

Gold in coins at nominal rates, in ingots at the rate of 5.45 rubles per 0.137 troy ounce, amounted to 652,514,000 rubles.

Silver and copper coins, 16,477,000 rubles.

THE CURRENCY SITUATION AT ODESSA.

[From Consul William L. Jenkins, Odessa, Mar. 22, 1919, in Commerce Reports, Apr. 2, 1919.]

There are in circulation notes issued by the Hetman government and the city of Odessa, Romanoff and Kerensky rubles being held for speculation. The currency situation is rendered more complex by the existence of counterfeit money and unauthorized Ukrainian notes, the latter being estimated to exceed 50,000,000 rubles. It is necessary to examine each note carefully, and often they are indorsed by the last holder. There is unlimited speculation in gold bullion, with consequent violent fluctuations, that render it impossible to gauge the value of the cash on hand. The Imperial Bank notes sell at 50 per cent premium for small amounts and 100 per cent for large; Kerensky's at considerably lower rates. Money changers exact as much as 19 per cent for small change.

NEW BANK NOTE ISSUE BY NORTHWESTERN RUSSIAN GOVERNMENT.

[From the Commercial and Financial Chronicle, New York, Sept. 6, 1919.]

Press advices to the daily papers from Stockholm August 27, said: "A dispatch from Helsingfors says the northwestern Russian Government is printing 350,000,000 rubles in new bank notes for the replacement of its interim notes. The notes will bear the signature of Gen. Judenich, head of the new government in Helsingfors, and the circulation throughout Russian territory will be compulsory. "Three months after Petrograd is taken from the Bolsheviki the notes are to be redeemable against State bonds. The new issue is to be guaranteed by Russia's entire assets. Forty rubbles are to be considered equal in value to a pound sterling."

NOTE ISSUE OF ARCHANGEL GOVERNMENT.

[From L'Economiste Europeen, Paris, Apr. 25, 1919.]

Since its establishment in December, 1918, up to March 31, 1919, the National Bank of Issue of Northern Russia has put into circulation 118,294,000 rubles of notes, covered by 16,000,000 of rubles in Russian securities and 102,294,000 rubles in specie deposited at the Bank of England. The notes are exchanged at the rate of 40 rubles for 1 pound sterling.

SIBERIAN DECREE WITHDRAWING KERENSKY NOTES.

[Consul John K. Caldwell, Vladivostok, May 7, 1919, in Commerce Reports, July 14, 1919.]

The following is a portion of the decree of the Omsk government under date of April 16 with regard to the withdrawal from circulation of the "Kerenki," or 20 and 40 ruble notes, as published in the Vladivostok Golos Primorya for April 30, 1919:

"All those who have Kerenki in their possession may bring them immediately, not later than May 15, to the nearest savings banks, Government bank branches, or treasury offices and deposit them. Those who are not able to get their 20 and 40 ruble Kerenki to the aforesaid Government institutions by May 15 may bring them in up to June 15; but they will be given a Government receipt stating that they are entitled to receive in cash half of the amount deposited, to be paid from June 15 to January, 1920, in one payment or in part payments, according to the availability of paper currency in the aforesaid institutions, and for the other half they will receive coupons of a noninterest-bearing 20-year Government loan. This half will remain as a loan to the Government and will be paid back with July 1, 1920, in installments, during 20 years. From those who keep their Kerenki after June 15 the notes will be accepted at a discount."

THE ARCHANGEL PAPER MONEY.

[From *Moniteur des Interets Matériels*, Brussels, Sept. 5, 1919.]

A London report states that since September 1, the Bank of England no longer accepts pounds sterling to be used as cover for paper money to be issued at Archangel. This decision shows the intention of England to withdraw completely from northern Russia. It puts an end to an arrangement made last November with the British Government, whereby a national bank of issue was created at Archangel to issue ruble notes at the rate of 40 rubles to the pound sterling and guaranteed mostly by gold deposits at the Bank of England. The latter issued ruble notes to those desiring such notes for remittance to northern Russia, against deposits in pounds sterling, held as reserve to insure the convertibility of the said notes. On July 31 last the issue of these ruble notes amounted to 111,090,000 rubles, guaranteed by 29,000,000 rubles in Russian securities and the rest by gold deposits at the Bank of England.

THE KERENSKY PAPER MONEY.

[From *L'Economiste Européen*, May 23, 1919.]

Mr. Mikhailoff, the minister of finance of the Omsk Government, has granted an interview on the subject of the Kerensky paper currency which is to be withdrawn from circulation. The minister said:

"The panic caused in the Far East by the new law has ruined many speculators. The banks in which paper currency speculating was done are closed. Reports from Harbin state that the value of the ruble, which fell during March and April, is again rising, whereas the value of the yen is falling. The law has been framed carefully and will be enforced without reserve. The Government will notify the rural population in time so that it may exchange its notes at the banks without suffering any loss. The Government has received in this the energetic support of the cooperative societies and the Zemstvos. The result of this law was not long in coming. The banks and the savings establishments are receiving daily several million rubles of paper currency as well as treasury notes (Bona du Tresor)."

THE OMSK GOVERNMENT WITHDRAWS KERENSKY NOTES.

[From the *Commercial and Financial Chronicle*, New York, Aug. 16, 1919.]

There has been extracted from circulation notes of the 20 and 40 ruble Kerensky issues to the amount of 953,000,000 roubles. These Kerensky notes from June 16 to July 15 were accepted at the price of 50 kopecks for a ruble; under the conditions that half of the payment be made in cash before January 1, 1920, and the remaining amount considered as a twenty-year loan without interest.

Beginning with July 16, the 20 and 40 ruble notes will be accepted for 25 kopecks cash for a ruble.

Prompt measures are being taken simultaneously aiming at the unification of monetary tokens and to the extraction from circulation of different kinds of their surrogates.

REDEMPTION OF NOTES BY ARCHANGEL GOVERNMENT.

[Cablegram from Acting Commercial Attaché Felix Cole, Archangel, Russia, June 20, in Commerce Reports, July 2, 1919.]

The decree of the Siberian Government that all 20 and 40 ruble treasury notes should be removed from circulation is now being put into effect by the Archangel

Government, except that all such notes which have been perforated and thus made a part of the general circulating medium in the northern region will be redeemed to their full value at once in the legal tender of the region. The notes that have not been perforated and that consequently are not legal tender will be redeemed to 50 per cent of their value now and the remaining 50 per cent in the course of 20 years, in strict accordance with the Siberian scheme. The two operations will be carried out during the month of July.

EFFECT OF COLLAPSE OF RUBLE IN MANCHURIA AND HARBIN.

[From the Journal of Commerce, New York, June 4, 1919.]

LONDON, *May 20*.—Advices to the Times from Peking state that the collapse of the ruble, which has now dropped to about 165 to the pound sterling (the prewar rate was 10 to the pound), has created an extraordinary situation at Harbin and in north Manchuria. Business is at a complete standstill, and the Omsk Government, in seeking to maintain the ruble, has added to the confusion by forbidding the import of goods from China.

The various kinds of notes differ enormously in value, while scratched, dirty, and torn notes are arbitrarily discounted according to their condition. The time limit fixed for the "Kerensky beer labels," for 40 or 20 rubles, hitherto the principal currency on the Chinese Eastern Railway, has depreciated these notes by nearly 80 per cent, and railway and banking finances are totally out of gear.

The Chinese, who have been speculating extravagantly in rubles since the war began and are immense holders, are in a panic because they fear that the devaluation of one category may be followed by the devaluation of other categories. The curse of the situation is the shortage of small change, which leads to a special value being placed on certain denominations, and consequent hoarding. The urgent necessity is for some sort of unification and the withdrawal of various categories of notes in circulation.

NOTE.—The normal value of the ruble being over 50 cents, the depreciated value, as above indicated, would be about 3 cents.

FORTY RUBLES EQUAL TO ONE DOLLAR IN RUSSIAN ARMENIA—TIFLIS.

[Boris M. Baievsky, Bureau of Foreign and Domestic Commerce, Sept. 1, 1919. In Supplement to Commerce Reports, Nov. 3, 1919.]

A corporation has been organized with Armenian and American capital, contributing three-fourths and one-fourth, respectively, in all \$1,000,000. Recently orders were obtained by the new corporation for \$1,000,000 worth of American goods. The arrangement is a matter of barter, and this is the only possible way of conducting business between the Caucasus and the United States at present because of the depreciation in the value of the ruble. There are in circulation newly printed Georgian rubles, which are much depreciated, 40 rubles being equal to the dollar.

SPAIN.

No data available on the amount of gold and silver used in the industrial arts during the year ended December 31, 1918.

The Government mint received neither gold nor silver returned from use in the industrial arts during the calendar year 1918.

The imports of United States gold coin during the year 1918 amounted to 50,000 pesetas (\$9,650).

Stock of gold and silver, also paper money, used for monetary purposes on Dec. 31, 1918.

Quantity of gold and silver produced from the mines during the year ended December 31, 1918: Silver, 920 fine kilograms from deep mines and placer mining, and 98,060 kilograms from lead ore.

OPERATIONS OF THE BANK OF SPAIN.

[Consul General Carlton Bailey Hurst, Barcelona, in Supplement to Commerce Reports, Oct. 16, 1919.]

A general survey of the business of the Bank of Spain shows that during the period 1914-1918 operations increased in nearly every line. The gold reserve increased 248.07 per cent, bank notes 68.75 per cent, current accounts 92.72 per cent, while only the silver reserve and loans on personal credit decreased. The gold reserve rose from \$370,117,080 at the close of 1917 to \$415,772,820 at the end of 1918; the silver reserve fell from \$127,896,840 to \$115,588,260; bank notes in circulation increased from \$504,000,000 in 1917 to \$596,918,700 in 1918, current accounts from a value of \$172,000,000 to \$207,668,160; deposits from \$1,607,220 to \$1,711,440; and the value of discounts, securities, and loans from \$131,000,000 to \$205,178,400. The advance in this last item was chiefly due to loans negotiated with the United States and France according to commercial conventions with these nations to prevent the depreciation of their exchange. The increase in gold was less during 1918 than in 1917, amounting to 12 per cent as against 53 per cent. In December, 1918, the bank notes in circulation approached the limit authorized by law, and a question arose as to altering the regulations of the bank in this matter. In August, 1918, the bank was authorized to increase its bank-note issue from \$540,000,000 to \$630,000,000, provided the additional \$90,000,000 should be guaranteed by the gold reserve.

The balance at the close of 1918 showed profits of \$17,348,386, of which, after deducting taxes and expenses of \$3,825,724, there remained a surplus of \$13,522,662 for dividends, which were paid at the rate of \$19 per share.

PROPOSAL FOR GOLD STANDARD AND REDEMPTION OF EXTERIOR DEBT, REJECTED.

The question of gold circulation was again agitated but was finally dismissed. A bill was introduced in May providing for the gold standard and redemption of the exterior debt. By its provisions the silver 5-peseta coin (worth about \$0.90) was to be made legal tender only up to 50 pesetas (about \$9); a mint was to be established to coin gold, and, until it was running, foreign gold coins were to be put into circulation after their value in pesetas had been stamped on them; surplus silver was to be demonetized and sold, and the expense of its redemption was to be met by an appropriation from the State of not less than \$1,800,000 annually. The proceeds of the sale of silver abroad were to be devoted to the redemption of that portion of it not held in Spain. Gold coins were not to be minted for less than 20 pesetas during the period of silver demonetization, and the 25-peseta bank notes were to be withdrawn from circulation. It is interesting to note that the gold in reserve is chiefly American gold, of which there is \$146,253,600 worth, English gold \$78,764,000,

and French gold \$38,604,600, beside which there are some \$81,000 worth of German marks, as well as gold of other countries and bars of gold.

THE GOLD CURRENCY.

[From the Bankers' Magazine, London, June, 1919.]

The newspaper press of Madrid has started a campaign against the idea, attributed to the Spanish Government, and particularly to the minister of finance, of putting gold currency into circulation. The campaign started on March 13. A summary of these articles in the press, as given in the Board of Trade Journal, discloses the following points: (1) During the war there has been a considerable influx of gold into Spain. Most of this gold is held by the Bank of Spain, and against it paper money has been issued for circulation. (2) When loans were conceded to France, the guaranty of France was treated as gold, and paper money issued in Spain for circulation against that guaranty. Apropos the renewal of this loan, the minister of finance urges that the cost of living in Spain is being unduly inflated by the issue of paper money not backed by gold. To remedy this, he suggests that gold should be put into circulation. (3) In the press it is rumored that England and Spain would shortly be accepting and circulating the gold coinage. A storm of protests has arisen because of these suggestions. (a) It is urged that this is not the right time to circulate gold. (b) Gold flowed into the country because of the peculiar position of Spain during the war. (c) It does not seem likely that in the future there will be the same influx, or on the same scale as hitherto. (d) The gold already stocked by the Bank of Spain constitutes a big advantage to Spain in regulating exchange in her favor and in keeping the value of her peseta at a premium as regards foreign coinage. (e) Foreign countries are bound to concern themselves with their own exchange and will try to rake in gold from all parts of the world. (f) They will probably offer good prices for gold and persuade private holders of this precious metal in Spain to sell out. Therefore, to circulate gold in Spain now would be suicidal for Spanish interests, for foreigners would take it rapidly. Not only ought the bank to keep steadfast hold on the gold it has, but pressure should be brought to bear on private holders to deliver to the bank their holdings.

STERLING AND DOLLAR EXCHANGE.

[From bullion letter of Samuel Montagu & Co., London, Apr. 10, 1919.]

On March 10 the Bank of Spain paid for British and American gold coin 25.20 pesetas for each pound sterling and 5.18 pesetas for each dollar. The price has therefore reverted to that which constituted the normal gold par between these countries.

FLUCTUATIONS IN DOLLAR EXCHANGE.

[Consul Robert Harnden, Seville, in Supplement to Commerce Reports, Nov. 17, 1919.]

The American dollar during 1918 dropped to the extremely low figure of 3.30 pesetas, the normal exchange being 5.18 pesetas. This advantageous exchange—that is, from the point of view of the Spanish buyer of American merchandise—has been a decided factor in the placing of orders in America. With the signing of the armistice toward the close of the year, the exchange became almost normal again, the dollar equaling in value 5 pesetas.

INCREASE IN FIDUCIARY NOTES.

[From the Statist, London, Feb. 22, 1919.]

A recent decree of the Spanish Government has authorized an increase in the fiduciary note issue of the Bank of Spain to 4,000,000,000 pesetas (\$772,000,000). The reasons given for the increase are to afford facilities for carrying into effect the projected financial convention with Italy and also to augment the credit granted to France by the acquisition of certain products.

INCREASE IN NOTE CIRCULATION.

[From the Economist, London, Jan. 3, 1920.]

MADRID, December 27, 1919.—The Bank of Spain has been authorized by royal decree to raise the note circulation from 4,000 to 4,500 million pesetas. By a royal decree of January 2 of the present year the bank had already been authorized to increase the note circulation from 3,500 to 4,000 millions. By this royal decree the Bank of Spain is obliged to guarantee the excess with gold and to increase from 150 million pesetas to 200 millions the maximum balance of the current account of the treasury in the bank.

SWITZERLAND.

There was no gold or silver coinage executed at the Federal mint during the year ended December 31, 1919.

The amount of silver coin withdrawn from monetary use by private individuals during the year 1919 was 32,800 francs (\$6,330).

The estimated quantity of gold and silver used in the industrial arts during the year ended December 31, 1919, was: Gold, 45,000,000 francs (\$8,685,000); silver, 8,000,000 (\$1,544,000). It is also reported that 2,000,000 francs (\$386,000) worth of platinum was used.

The total import of United States gold bullion during the year ended December 31, 1919, was 1,960,000 francs (\$378,280).

LAWS AFFECTING THE CURRENCY.

At the meeting of the board of directors of the National Bank, which was held April 11, 1919, article 20, paragraph 2, of the banking law was amended to read as follows:

"The metallic reserve shall be at least 40 per cent of the notes in circulation. Under abnormal circumstances the said reserve may, with the approval of the board, fall temporarily to 33½ per cent."

HIGH RATE OF EXCHANGE AND INCREASING GOLD RESERVES IN SWITZERLAND.

[From the Commercial and Financial Chronicle, New York, Nov. 22, 1919.]

Under date of November 16 the Associated Press had the following to say in advices from Geneva:

"Switzerland is suffering from her increasing gold reserves and the high rate of exchange in her favor, according to financial writers. Swiss exchange now stands at 100 marks for 14 francs, which is the highest in Europe. This is considered too heavy, resulting in the crippling of Swiss industries and export trade. Neighboring nations, because of the loss in exchange, are refusing to buy Swiss goods, but are trying to sell at prices with which the Swiss are unable to compete. Germany is said to be profiting by the opportunity.

"The Swiss Government, desiring to aid home industries, is perplexed by the situation, as are other nations. For example, France and Italy, because of exchange rates, can buy from Germany at about one-third the price asked by the United States and England.

"Recently the Swiss Government asked bids for the construction of a bridge across the River Aar, near Berne. German contractors offered the complete bridge at a lower price than Swiss firms said would be required to buy the raw materials for the structure. The financial condition is considered by experts to be a new economic danger for Europe, especially as wages and the cost of living are continuing to increase."

IMPORTATION OF AUSTRO-HUNGARIAN PAPER MONEY PROHIBITED.

[From Bulletin de Statistique, Paris, August, 1919.]

By Federal decree of March 7, 1919, the importation of Austro-Hungarian paper currency, stamped or unstamped, was prohibited till further notice.

EXPORT AND IMPORT OF RUSSIAN PAPER MONEY PROHIBITED.

[From Bulletin de Statistique, Paris, August, 1919.]

A Federal decree of March 7, 1919, prohibits the importation and exportation of Russian paper money as well as the importation of Russian securities.

REPEAL OF LAW PROHIBITING PREMIUM ON ALL GOLD COINS.

[From Bulletin de Statistique, Paris, October, 1919.]

A Federal decree of July 25, 1919, repeals the law of July 8, 1918, prohibiting a premium on all gold coins.

COMPARATIVE ABRASION OF THE VARIOUS COINS.

[From the Bullion Letter of Samuel Montagu & Co., London, Jan 22, 1920.]

It is reported officially in Switzerland that the comparative abrasion of various coins was tested by placing equal weights of many varieties inside a drum which was revolved for 40 continuous hours. The result was as follows:

	Per cent.
10-rappen piece of aluminum alloy.....	11. 27
1-franc piece of 0.835 silver, 0.165 copper.....	7. 79
2-franc piece of 0.835 silver, 0.165 copper.....	6. 62
$\frac{1}{2}$ -franc piece of 0.835 silver, 0.165 copper.....	5. 77
5-rappen piece of brass (100 rappen=1 franc).....	4. 01
10-rappen piece of brass (containing 60 per cent copper, 40 per cent zinc).....	3. 69
5-rappen piece of copper-nickel.....	3. 29
10-rappen piece of copper-nickel.....	2. 45
1-rappen piece of bronze.....	1. 23
2-rappen piece of bronze.....	1. 09
20-rappen piece of pure nickel.....	. 59

It seems a pity therefore that the Indian Government did not decide upon pure nickel, which has also the faculty of retaining its pristine condition to a remarkable degree.

The hardness of pure nickel gives this metal many advantages. Owing to the clear cut effect produced by a die upon this metal, it is almost impossible to manufacture spurious coins. Great expense must be incurred in setting up suitable plant; and intense heat is required to melt and cast the blanks. We are informed that the methods of dealing with it are so perfected that ordinary steel dies can now be used.

The 1914 report of the deputy master of the royal mint referred to the resistance of pure nickel to chemical attack, and the discovery recently has been made that pure nickel coins harbor far fewer bacteria than those composed of other metals.

Like cobalt and iron, nickel is subject to magnetic attraction, but an admixture of only 5 per cent of other metals deprives it of this quality. Thus the detection of nickel-alloy coins is rendered easy.

The Swiss Government was compelled to relinquish coining nickel during the war, and resorted to brass scrap, out of which excellent golden colored pieces were minted. Iron, zinc, and aluminum have been utilized for coinage on the Continent of late, and it has even been stated that disks cut out of tin jampots have circulated as money in regimental districts in the East where troops have been stationed.

TURKEY.

PRACTICE OF BARTER IN TRADE.

[Trade Commissioner Mears, Constantinople, Dec. 15, in Commerce Reports, Jan. 27, 1920.]

Owing to the exchange situation, few Levant merchants are placing orders for future delivery. Trade through all the Black Sea ports is being done mostly on a barter basis.

NOTES IN CIRCULATION.

According to *l'Economiste Europeen*, Paris, January 23, 1920, the notes in circulation amount to 159,280,000 Turkish pounds (\$700,274,520), totally uncovered.

ASIA.

ARABIA.

NEW TRADE DOLLAR FOR RED SEA COMMERCE.

[Consul Addison E. Southard, Aden, Jan. 15, in Commerce Reports, Mar. 2, 1920.]

An Italian decree of May 31, 1918, provides for the coinage by the Royal mint at Rome of a silver trade dollar to be known as the dollar of Italy. This coin is primarily for use in the Italian colony of Eritrea, where it is meant to replace the well-known Austrian Maria Theresa dollar or thaler; but the possibility that it will replace the Austrian trade dollar throughout the Red Sea district was undoubtedly an important consideration in providing for the coining of this new dollar. The first consignments of the Italian thaler, amounting to probably 1,000,000, have recently been put into circulation in Eritrea.

IMPORTANCE OF MARIA THERESA DOLLAR.

For more than 100 years past the most important and widely used coin in the Red Sea commercial district—which includes Eritrea, Abyssinia, French, British, and Italian Somaliland; Socotra; Makalla; Aden Protectorate; and the Arabian Red Sea Provinces of Yemen, Asir, and Hedjez—has been the Austrian Maria Theresa thaler. This trade dollar was first minted at Trieste in 1780 to serve the eastern commerce of that port. Up to 1914 considerable quantities were minted each year at Trieste, usually bearing the date of 1780, and it is estimated that at the beginning of the World War there were as many as 200,000,000 Maria Theresa dollars in circulation or hoarded in the Red Sea commercial district. Naturally, the sending out of new supplies from Trieste was stopped by the war. The rise in the price of silver has resulted in the buying up of many of the dollars in this district by traders for export to India, England, and other places for melting down into bullion.

It is estimated that fully a third of all the Austrian dollars in circulation at the beginning of the war in this commercial district have gone to the world silver markets in the shape of bullion. With no new supplies available, there has resulted a serious shortage in a medium of exchange for commercial purposes, and traders have found themselves much handicapped in doing business away from the seaports. The Red Sea native much prefers the Austrian dollars to any other coin, and often he will refuse to sell his coffee, skins, hides, and other products for other coins. This situation can be met only by barter—that is, by actually trading to the native cotton piece goods and other manufactures for his own products. Obviously such a situation does not make for commercial progress, and this is one reason for the issuance of the new Italian dollar.

OPPORTUNE TIME TO SUBSTITUTE ITALIAN COIN.

Although the Italian dollar is planned to help Eritrean commerce, the matter of Italian pride has been even a more important factor in bringing about its issuance. The Italian Government has felt that its colony of Eritrea should not be permitted to depend upon an Austrian coin to facilitate trading and considers the present an opportune time to substitute for it a new dollar bearing the stamp of Italian sovereignty. If the new dollar can be popularized in other parts of the Red Sea district, as is planned, it should be a very valuable aid to Italian political and economic influence.

The Maria Theresa dollar was coined in Trieste for private demands and a mint charge of $1\frac{1}{2}$ per cent collected. It was solely a trade dollar and was not issued for governmental use. The Italian dollar is coined in Rome for the Eritrean Government but will also be coined upon private demand. Italian money is the legal circulating medium in Eritrea, and although the new dollar will be coined at the request of the Eritrean Government it will have the identity solely of a trade dollar.

ITALIAN AND AUSTRIAN TRADE DOLLARS COMPARED.

The new dollar has in place of the effigy of Maria Theresa on the Austrian dollar the effigy of symbolic Italy, which resembles somewhat that of Maria Theresa, but principally lacks the brooch of 10 jewels on the shoulder of the robe worn, which is important to the native user of the Austrian dollar as an indication of whether or not it is sufficiently worn to have lost weight. On the reverse side the double-headed Austrian eagle has been replaced with the single-headed Italian or Savoyard eagle, and the Austrian coat of arms on the shield carried on the eagle's breast replaced with the Cross of Savoy.

The difference in inscriptions is not important, as the native does not read them, but he has noticed already the absence of the shoulder brooch on the female effigy; and the substitution of the cross on the new dollar may also be objected to by the Red Sea natives, who are mostly Mohammedans. There is, however, a strong resemblance between the two coins, and the design is considered an attractive one in Red Sea commercial circles.

WEIGHT, SIZE, AND VALUE OF THE TWO COINS.

In weight and size the two dollars are almost identical. The Austrian dollar averages in weight 433.02 grains of silver, with a fineness of 0.8333 and a diameter of about 40 millimeters (1.57 inches). There is a slight variation of this weight and measurement in coins of different periods, although all are of the same design and bear usually the same date. The new Italian dollars will average 433.12 grains of silver of 0.835 fineness and have an average diameter of 40 millimeters.

The present (December, 1919) price of the new Italian dollar in Eritrea is 9 Italian lire. Theoretically the Austrian dollar has the same value, but some traders are understood to be offering in Eritrea a premium of one-half lira for Austrian dollars to be used in the Abyssinian trade. The Abyssinian is a particularly conservative individual, and it will probably be some time before he will accept the new trade dollar as the equivalent of the Austrian dollar, although the former weighs even slightly more. The present quotation on Maria Theresa dollars in the Aden market, the center of this commercial district, is 228 rupees per \$100 (the present exchange value of the rupee is around \$0.45 United States currency). The new Italian dollar is not yet in circulation in Aden, and is not, therefore, quoted.

INFLUENCE ON ITALIAN ECONOMIC PRESTIGE.

Indications are that the coinage of the Maria Theresa dollar will not be resumed, at least not in the near future, and that being the case the new Italian dollar has a favorable opportunity to take its place in Red Sea commerce, much to the advantage of the political and economic prestige of Italy and to the profit of the Italian banks and merchants dealing in the dollars. It is believed that the Red Sea commercial district could take upward of 2,000,000 of these trade dollars per year.

The proposed substitution of a new trade dollar for the old and established Maria Theresa dollar in this district promises to be an interesting contest between commercial progress and the decided conservatism of the native producer in Red Sea territories. Abyssinia offers the most important field for the use of these new dollars, and if they are established in that country the result will undoubtedly be decidedly in favor of the development of Italo-Abyssinian commercial relations. It is understood that prominent Arab merchants located in Eritrea will also undertake the introduction of the new Italian trade dollar into Arabian Red Sea ports. The commerce of these ports, which has long been controlled from Aden, is an important consideration in the future development of the Eritrean port of Massaua, and the dollar is likely to be a favorable influence in this situation.

This step of the Italian colonial Government to replace the Austrian Maria Theresa dollar will be not only a decided advantage to Italian commerce in all the Red Sea territories but will be, as well, an advantage to trading communities of other nationalities in the district which have been inconvenienced by the trade dollar shortage.

The gold coinage executed at the Sydney mint (Australia) for the Indian Government during the calendar year 1919 was 2,000,000 sovereigns, equal to 30,000,000 rupees (\$770,600). This represents sovereigns obtained from Australia in exchange for gold bullion sent to the Sydney mint.

The imports of United States gold coin and bullion during the year ended December 31, 1919, were as follows: American 20 and 10 dollar pieces, 3,326,497.2 grains (6,930.2 ounces fine); value, \$143,260; gold bars bearing United States mint marks, 112,173,-952.41 grains (233,695.7 ounces fine); value, \$4,830,920. In addition to this, \$18,789,000 worth of American gold was purchased by the secretary of state for India in the United States of America and shipped to India.

² The Government of India does not possess accurate information about the amount of gold and silver in circulation in India.

³ Held in currency offices and chests as part of the paper currency reserve.

⁴ Includes 296,427,148 rupees held in the currency offices and chests as part of the paper currency reserve.

⁵ Held at the head offices of the Presidency banks of Calcutta, Bombay, and Madras. Figures for branch banks and other banks are not available.

PREMIUM ON GOLD FOR 1919.

No quotations for the premium on the sovereign are available as dealing in this coin above its legal tender value of 15 rupees continued to be prohibited during the year. There was, however, a considerable premium on gold bullion as compared with the ratio of 15 rupees to the sovereign. Attempts were made to reduce this premium by means of sales by the Government of gold to the public. Seven such sales were held during the last four months of the year, the total amount sold being over 1,200,000 fine ounces (\$24,806,202). At the close of the year the market price for gold was 72½ rupees per fine ounce.

GOVERNMENT OF INDIA ADOPTS GOLD STANDARD AND SILVER TO REMAIN LEGAL
TENDER WITH FIXED RATIO TO GOLD.

[From the Engineering and Mining Journal, New York, Feb. 7, 1919.]

The Empire of India changed from a sterling and silver basis to a gold basis on February 2, according to a copyrighted dispatch in the Sun and New York Herald. The secretary of state for India in council announced the adoption of a report by the Indian exchange and currency committee and its recommendations go into effect at once so far as possible.

The main feature is that gold in the future will be the standard value in India and silver will remain a legal tender with the fixed ratio 1 rupee for 11.30016 grains of fine gold. The committee recommended that the British pound, which now is rated by law in India as worth 15 rupees, should be made legal tender in India at the revised rate of 10 rupees. This provision, however, is not to be adopted at once because disruption would ensue in commercial affairs. For the time being, therefore, gold imports will continue to control and will be converted into rupees at the rate of 15 to the pound.

The reorganization of the Indian currency system assumes great importance because of the huge volume to which foreign trade has grown and the consequent inconvenience in making payments to and taking payments from the outside world when silver, which is so hard to obtain, was the only metal that could be tendered in payment.

The currency report also goes into the matter of popularizing paper money in India. A system will be adopted providing for an issue of paper currency with a legal minimum metallic reserve of 40 per cent, the balance to be based on Government securities. The amount of this class of paper money necessarily will be rigid, expanding and contracting only as the metallic reserve or Government securities fluctuate. Such fluctuations might tend to contract the currency at the very time when active trade demanded expansion. To provide for such seasonal currency requirements an issue of paper currency by the presidency banks based upon commercial paper is to be permitted.

From this outline it will be seen that India's new system resembles that in vogue now in the United States, because part of the currency is backed by Government bonds and metal, while the balance is based on commercial paper and is regulated in quantity by the needs of commerce.

VALUE OF RUPEE RAISED TO TWO SHILLINGS.

[From the Commercial and Financial Chronicle, New York, Sept. 20, 1919, p. 1122.]

A special cable to the Journal of Commerce September 10 said:

"The decision to raise the value of the rupee to 2s. came as a surprise, although it had been expected some time back, when silver first rose above 5s. an ounce. This is the fourth advance this year. The main purpose is to prevent Indians from melting rupees for sale as bullion.

"A higher rupee benefits the Lancashire cotton industry and encourages exports to India, but discourages India's exports."

FURTHER CHANGE IN RUPEE-SOVEREIGN RATIO.

[From the Mining Journal, London, Jan. 31, 1920.]

In December, 1919, the ratio between rupees and sovereigns was fixed at 8.57 of the former for 1 of the latter.

OPERATIONS OF THE INDIAN MINTS.

[From the Australasian Insurance and Banking Record, Nov. 21, 1919.]

The officiating controller of currency, in reviewing the reports of the Calcutta and Bombay mints for 1918-19, states that the imported gold acquired during the year at the two mints under the gold import act of 1917 amounted to 294,872 rupees, against 183,666,547 rupees, the value of gold acquired during the previous year. The receipts on account of acquired gold and other minor receipts at the two mints from miscellaneous sources were: Sovereigns and half-sovereigns, including short weight and uncurrent coin, 77,863 rupees; foreign coin, 828 rupees; gold bullion, 237,125 rupees; total, 315,816 rupees. Besides the above, a consignment of 1,500,000 sovereigns was received at the Calcutta mint from the Commonwealth Bank, Sydney, under an arrangement whereby sovereigns coined at the Sydney mint were obtained in exchange for an equivalent amount of gold bullion shipped to Australia from the gold holdings in the currency reserve. The total value of bullion and foreign coin shipped abroad on this account and on account of the payment made in gold to the United States of America for silver received therefrom under the Pittman Act amounted to 53,294,147 rupees. Gold coin and bullion valued at 12,479,691 rupees were also issued to Native States in exchange for rupees. The Bombay mint continued to receive the usual consignment of gold from the Indian mines for safe custody on behalf of the Bank of England; £1,671,658 worth of South African gold held at the Bombay mint for safe custody, was shipped during the year on behalf of the Bank of England. During the year under review a branch of the Royal Mint was opened at Bombay with the object of coining sovereigns in India, the large accumulations of gold acquired under the gold import act being utilized for this purpose. The actual coinage was begun in August, 1918, and 1,295,372 sovereigns were coined during the year. Pending the completion of the arrangements at the branch royal mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign. Although 2,109,703 pieces of these new coins of the nominal value of 31,645,545 rupees, were struck at the Bombay mint. The quantity of silver coinage carried out at the mints during the year constitutes a new record, the total nominal value being 520,535,309 rupees, as compared with 307,707,326 rupees for 1916-17, which had hitherto been the heaviest coinage recorded.

Uncurrent coins of the nominal value of 5,543,733 rupees were received at the two mints for recoinage during the year. Apart from these, the coinage was from purchased silver, a considerable portion of which consisted of American dollars and other silver made over by the United States under the Pittman Act. The demand for fractional silver increased largely, and the coinage of half and quarter rupees during the year was exceptionally heavy.

NICKEL REPLACES SILVER.

[From the Statist, London, Jan. 17, 1920.]

Should the present high price of silver (82½d. per ounce) continue, the home Government may have to consider seriously whether they ought to follow India's example, and issue nickel tokens, or perhaps paper money of a lower denomination. The Indian mint is already issuing nickel pieces of 4 and 8 annas in place of silver coins, and the consequent withdrawal of silver currency will probably compel them to issue coins in the base metal of higher denominations.

THE MELTING OF GOLD MOHURS.

[From the Commercial and Financial Chronicle, New York, Nov. 22, 1919.]

Owing to the late arrival of dies, the Bombay mint did not commence the coinage of sovereigns until September, 1918. Between them and January, 1919, its output amounted to £1,295,372, which, however, did not reach the hands of the public. Issues had been made in the late spring which resulted in a net absorption of nearly £2,000,000 in 1918-19, about £200,000 more than in the preceding financial year. Although open dealing in sovereigns has ceased since the prohibition of their use otherwise than as currency, the official Indian report states that there is no doubt that melting has taken place behind the backs of the police. It is common knowledge that speculators have acquired new mohurs and sovereigns from cultivators and that the coins have now been lost to currency, probably forever.

ABSORPTION OF PRECIOUS METALS.

[From the Statist, May 31, 1919.]

India has been during the long period of the war and since the armistice, the dominating influence on the international market, as indeed she has to a large extent or at any rate, to an appreciable extent, on the gold market of the world. She has imported during the war over 50,000,000 worth of gold, and not satisfied with this, she has in addition imported nearly wholly through the medium of the United States 400,000,000 ounces of silver, and in addition she is obtaining nearly £200,000,000 worth of silver. This silver is said to be required for the coining of rupees, but there seems little possibility of doubt that the native, although it is illegal to do so, as soon as he gets the rupee from the mint, promptly melts it into bullion for the purpose of hoarding. Indian women from time immemorial have been accustomed to wear silver ornaments around their necks, on their arms, and round their ankles, and it is now reported by those in close touch with India that they are wearing gold chains concealed under their clothing about their persons. This is economically unfortunate, and it is, of course, in addition a disquieting political feature.

GOVERNMENT AUTHORIZES PURCHASE OF GOLD.

[From the Commercial and Financial Chronicle, New York, Aug. 16, 1919.]

An important statement was made during the week by Basil P. Blackett, of the British Treasury, to the effect that the secretary of state for India announced that on and after Tuesday, August 12, and until further notice, the deputy master of the Ottawa branch of the royal mint has been authorized to sell immediately telegraphic transfers on India without limit of amount in exchange for gold tendered at the Ottawa mint at the rate of 1 rupee for 10.3585 grains of fine gold. The reason for this action is found in the increased value of the Indian rupee in pounds sterling, caused by the anti-British Hindoo contingents, largely Bengalese, who are using the silver rupee as a political weapon and refusing to accept rupee notes or sterling credits in commercial transactions, thus causing embarrassment to the British authorities who find it difficult to either purchase silver at present exorbitant quotations or overcome the oriental demand for the metal, to which they are most accustomed by ages of usage and tradition. In addition to being an official recognition of the

intrinsic worth of the silver content of the rupee, the fixing of the new level is an attempt on the part of Great Britain to settle Indian balances in gold instead of silver, and should, it is argued, result in the elimination of India as a purchasing factor in the silver markets and a consequent reduction of the world demand for silver.

ISSUE OF 1-RUPEE NOTES.

[Samuel Montagu & Co., London, Sept. 4, 1919.]

An interesting feature is the issue of 1-rupee notes in booklets of 25. The innovation appears to be popular.

CEYLON—COLOMBO.

CHINA.

THE CURRENCY SYSTEM.

[By W. C. Lane, in the Bankers' Magazine, New York, May, 1919.]

The currency system of China is unbelievably crude. The only thing that bears any semblance to currency as we know it is the Mexican silver dollar. The remainder of the currency consists of bank notes. These notes, however, are good only in the province in which they are issued; notes of Shanghai are not good in Peking, for example, and even branches there of the issuing bank in Shanghai will not take the notes of their own head office except at a discount.

There is still another crudity. All values are estimated in taels, not in dollars, but the tael is not a coin; it does not pass as currency. It is a lump of silver stamped by the mint of the province in which it is issued. The taels of different provinces have different values. The Hongkong tael has not the same value as the Shanghai tael, so that when a Shanghai man buys goods in Hongkong, he has to figure out his expenditures first in Shanghai taels, then in their equivalent in Hongkong taels, and before he gets through with his business he has figured a lot and paid a good deal.

China must have a national system of currency, but I am afraid she can not devise one for herself. The great question is, who is going to do it for her? All we can hope is that it will fall into the right hands.

Another thing which it is important to remember is that the silver dollar is not a medium of exchange between banks; that is, if one bank owes another bank \$100,000, it can not pay 100,000 silver dollars. It must pay in taels. That is the only means of settlement. When a trade is made, the balance due—in lumps of silver contained in boxes—is wheeled through the streets in barrows. If you owe 10 banks you have to send one or more wheelbarrow loads of silver to each of them. It is a pre-Adamite system.

HOARDING SILVER.

[From the Far Eastern Review, Shanghai, February, 1920.]

Mr. Chang Kungchuan, vice governor of the Bank of China, says:

"According to reports to hand, the export trade of China has been decreased by \$100,000,000 annually, while \$300,000,000 worth of silver has been stored up by the people within the last three years. For the last six or seven years all the mints in China have produced about \$600,000,000 worth of silver coins.

"The habit of hoarding silver must be done away with if the native trade is to be improved. The redemption of the bank notes also depends largely upon the abolition of the silver-hoarding habit of the Chinese people."

IMPORTS AND EXPORTS OF GOLD AND SILVER IN 1917 AND 1918.

[Consul General Thomas Sammons, in Supplement to Commerce Reports, Oct. 15, 1919.]

Imports of gold, practically all from Hongkong, amounted to only \$811,772 in 1918, as compared with \$12,958,990 in 1917; exports of gold declined from \$3,698,308 in 1917 to \$2,636,738 in 1918. Silver imports advanced from \$18,904,507 in 1917 to \$34,674,435 in 1918, and came principally from the United States, Hongkong, and Japan; exports were \$9,927,033, against \$42,783,071 in 1917. Hongkong and India absorbed practically all that went out from Shanghai.

CHINESE NOTES AT A DISCOUNT.

[From the Annual Bullion Letter of Samuel Montague & Co., London, 1919.]

Notes issued by Chinese official banks have not been favored by the populace and have fallen to a heavy discount. Hence a shortage of metallic money was felt, and the mints, especially that at Nanking, were actively employed. It has been estimated that the Chinese mints have been absorbing 5,000,000 taels a month. The demand for silver from the interior of the continent was, and is likely to be, persistent, for many old forms of currency have ceased to circulate. Old stocks of silver roubles have been used up for jewelry or converted into rupees. Several varieties of rouble notes have become worth little more than the paper of which they are composed, while rupees are forbidden to be exported from the country of origin. In these circumstances China remains the chief source of silver supply for central Asia.

AMOY.

IMPORTS AND EXPORTS OF GOLD AND SILVER IN 1918.

[Consul C. E. Gauss, in Supplement to Commerce Reports, Dec. 30, 1919.]

The total treasure imported in 1918 amounted to \$4,234,773, compared with \$2,946,628 in 1917. Of the 1918 total, \$780,455 represents almost entirely imports from Hongkong and is made up of \$207,976 in gold and \$572,479 in silver, including approximately \$400,000 in subsidiary silver coins. The import from Chinese ports is almost entirely in silver coin, Shanghai supplying \$1,289,821, Foochow \$874,071, and Swatow \$1,283,268.

The exports of treasure show a value of \$1,802,238 in 1918, compared with \$2,339,245 in 1917. Of the 1918 export, \$36,658 represented gold and \$432,745 silver (total \$469,403) to foreign ports (Hongkong, Macao, Japan, and the Dutch Indies). Of the export of \$1,332,835 to Chinese ports, Shanghai drew \$742,054, Foochow, \$460,657, and Swatow \$130,124.

The unusual excess in the importation of subsidiary coins in 1918 is stated to be due mainly to remittances by the Peking authorities for the maintenance of the naval training squadron now at Amoy and of the Government troops in this district.

Accurate deductions can not be drawn from the figures for treasure imports and exports, however, as the money carried by the large number of passengers and by the crews of vessels is an unknown quantity which must affect the apparent excess of imports over exports of treasure.

RATE OF EXCHANGE.

Money was not free during the year, and at the end of the year it was particularly tight. With the Spanish dollar—the book unit employed by the British bank at the port—at par with the Hongkong dollar, gold exchange here followed the Hongkong quotations quite faithfully. The bank's average buying rate for the Spanish dollar, in terms of United States currency, was \$0.783; the average selling rate, \$0.771.

The premium on the silver dollar—sometimes known locally as the silver or chopped yen, and embracing Hongkong, Mexican, and Yuan dollars, Formosan silver yen, and Indo-China piasters—over the Spanish dollar fluctuated widely during the year and was the cause of much speculation. It was 4½ per cent at the beginning of the year and 10 per cent at the end; the lowest quotation was 3 per cent in April, and the highest 11½ per cent on December 29. The average rate, buying, was 5.75 per cent premium, and the average selling rate 6.5 per cent premium over Spanish.

ANTUNG.

EXCHANGE RATES.

[Consul John K. Davis, in Supplement to Commerce Reports, Jan. 26, 1920.]

The following table shows the high exchange value of the Antung tael, the unit of this district, which continued throughout the year:

of this district, which continued through

in the value of the local unit of

As during the two preceding years, this inflation in the value of the local unit of exchange tended greatly to stimulate imports from Japan, an advantage that was accentuated by the inability of the United States and Great Britain to secure sufficient bottoms to ship their products to this market.

CANTON.

According to information supplied by the Asia Banking Corporation, through the United States consul general at Canton, in June, 1920:

The Haikwan tael is never used in business by any of the banks, but only by the Chinese maritime customs.

The Canton tael is merely a weight and is never dealt with in the banking business.

The Yuan dollar is practically never used in business transactions.

The British dollar has entirely disappeared from the market, due to the fact that they contain more silver than the Hongkong dollar and have been swallowed up by the Chinese, and no quotations are available.

No quotations are available on the Mexican dollar, but quotations are given on the Hongkong dollar, as being the only ones available.

THE CANTON MINT.

[From the Far Eastern Review, Shanghai, January, 1920.]

Director Kun Ching, of the Government mint, Canton, has ordered the collection of all old Kwangtung 10 and 20 cent pieces for the purpose of recoinage. The mint has been turning out 750,000 pieces of 20 and 10 cent coins daily, and working day and night. The Canton Times claims that this mint is unique for the fact that it has turned out more individual coins than any other mint in the world, most of the coins being 1-cent copper pieces.

DAIREN.

BANKING AND CURRENCY.

[Consul A. A. Williamson, in Supplement to Commerce Reports, Jan. 26, 1920.]

All the large export business and the greater part of the local business is done in silver yen, and, as a rule, even payments made in gold are based on silver and are liable to the fluctuations of that currency. The silver yen is a monopoly of the Yokohama Specie Bank, and is issued at Dairen for circulation in Manchuria. These notes are supposed to be convertible (redeemable with silver coins), but it is commonly considered doubtful whether the note issue is adequately secured. A heavy run on the bank would probably force a cessation of payments, but governmental action would probably intervene to prevent such an occurrence. Other currencies are the ordinary Japanese gold yen and notes of the Bank of Japan and the Bank of Chosen (the latter being accepted in Japan proper at a discount). There is also the Mexican dollar, Chinese small silver coins, and Chinese notes issued at various places in Manchuria. According to information supplied by the local branch of the Yokohama Specie Bank (Ltd.), their silver yen notes in circulation at the end of 1917 amounted to 3,074,870 and at the end of 1918 to 2,366,089.

A bank clearing house was instituted in Dairen and began operations on September 5, 1918. The system used in compiling statements is somewhat different from that in use in the New York Clearing House, and their statements issued to the public are monthly compilations. Two banks listed on the gold-account statement are not found on the silver-account statement, as they do not handle silver accounts. The clearing-house statement for the month of December, 1918, shows that the bills cleared on gold the balance held by the banks was 36,443,020 gold yen, and that bills numbering 4,939, amounting to 19,777,523 silver yen, were cleared on silver accounts, leaving a balance of 6,125,969 silver yen in the banks.

The currency exchange, which has been functioning for some time, serves a real need in connection with legitimate business on the produce exchange. The standard currency of the latter is silver, and all quotations and accounts are in silver yen. Therefore, when purchases of soya beans, oil, or other listed products are in silver yen, the buyer generally covers at once on the currency exchange, buying either spot or future delivery silver to meet his requirements. Unless he does so, he takes a gambler's risk of exchange going against him with possibly heavy losses, for silver fluctuates from day to day, sometimes severely and from a variety of causes, local and international. The buyer of produce on the exchange, therefore, has to watch not only the price and gambling tendencies shown there, but also the daily and hourly fluctuations of silver. Both buyers and sellers at the produce exchange usually have reports brought them from the currency exchange or from currency brokers every one or two hours.

FOOCHOW.

COMPLICATED COINAGE.

[From the Far Eastern Review, Shanghai, February, 1920.]

There has been considerable talk of currency reform in China, but to date nothing tangible has been done. Recommendations have been made to the Chinese Government by diplomats and by responsible organizations, and expressions of good intention have come from the Peking Government, but there the matter ends for the moment. An illustration of the extraordinary confusion caused by the multiplicity of taels and dollars current in one locality is given by the commissioner of customs at Foochow in his report for 1918. He says the currency confusion there is unique even for Foochow, and illuminates his statement as follows: Prices are reckoned in dollars, which are of every variety—Mexican, French, Hongkong, Straits, "Yuan Shih-k'ai," and yen, to mention a few of the silver coins. There are also paper dollars, but as these are only current in Foochow itself and are not accepted by the tea dealers, there is no need to enter into their intricacies.

The silver dollar, as soon as it appears on the market, is chopped by each money shop or firm through whose hands it passes. A clean, unchopped dollar is looked upon askance. The chop affixed may consist merely of an ink stamp, which does no damage to the coin, or may consist of the money shop's or firm's name—a form of guarantee—being stamped in by means of a sharp die, which actually defaces the coin.

A properly guaranteed dollar assumes a cup shape, not infrequently with a hole through the center. Silversmiths levy toll by scooping out some of the silver. A clean dollar, once it escapes into circulation, comes back unrecognizable. Banks keep accounts in chopped dollars, but clean dollars may be bought and sold at differential rates.

The local currency, however, is not the dollar. There are two tael weights, of which the accepted standard is the Hsin-i-p'ing tael. One hundred chopped dollars are represented, nominally, by 74.16 Hsin-i-p'ing taels. There is no official guarantee that the scales in use do not differ. One hundred dollars, not overchopped, if paid into a bank account, will generally be accepted by count, larger sums by weight; but a cheque drawn for similar amounts may realize the amount it is drawn for by count, may have an enforced 1 per cent discount inflicted to cover good dollars issued, or may realize 102 or 103 or more pieces of silver, which may consist of some good dollars, some badly chopped dollars—which, however, may still pass for face value—and an assortment of what were once dollars but are now useless for any other purpose but to resell for their weight, attached to which transaction there is a gain or a loss, depending on the qualifications of the individual disposing of them.

The weights used for receiving and for paying out differ in some instances, the weight for receiving being Hsin-i-p'ing 74.16 taels and for paying a weight called a Yangp'ing tael, which is reckoned at 71.7 for each 100 dollars. Yangp'ing 100 taels, however, equal Hsin-i-p'ing 103.3 taels, so that the actual rate at which a depositor receives back his money is Hsin-i-p'ing 74.066 taels. A depositor who cares to make the experiment may get rid of his capital if he takes the trouble to pay it in and draw it out a sufficient number of times. This is roughly the position of the Foochow silver currency. The rate of exchange between the Foochow and Hongkong fluctuates. There may be a discount, or, at another time, the Foochow chopped dollar may reach an 8 per cent premium against the clean Hongkong currency. In other words, 92 clean Hongkong dollars, duly passed through the chopping process at Foochow, become equal to 100 clean dollars at Hongkong. The rate of discount of local dollars on Shanghai varies between 1 and 4 per cent. The average Shanghai tael selling rates quoted for the past four years were: 1915, 71.48; 1916, 70.49; 1917, 71.35; 1918, 71.73.

Sufficient has been said to show that trade has to work under extraordinary conditions at Foochow, of which not the least extraordinary is the currency question. What is more extraordinary than all is that it has been submitted to for all these years.

FINANCIAL CONDITIONS.

[Consul Geo. C. Hanson, in Supplement to Commerce Reports, Dec. 30, 1919.]

There are two foreign banks at Foochow, the Hongkong & Shanghai Banking Corporation, British, and the Taiwan Bank, Japanese. These banks do a general banking business and handle foreign and China coast exchange. In the fall of 1918 the Chartered Bank of India, Australia, and China closed its branch here, leaving its exchange

business in the hands of a British firm. While it is believed that, to a certain extent, lack of business caused it to close its doors, the shortage of available staff, due to the war, was a great factor in causing the bank to leave Foochow, where it had been long established. The other two foreign banks appear to have had a good year.

It is reported that there are 39 native banks at Foochow, the average capital of each being about \$22,000, and the average amount of their notes in circulation being about \$25,000. During 1918, about 10 of these banks failed, for an aggregate amount of about \$110,000, only half of which was a dead loss. Political disturbances caused poor trade throughout the Province, which was reflected in the poor banking business done.

The demand on the part of the military for money to enable them to finance the expedition against the revolutionists produced a tight money market at Foochow during the year. Ready money became very scarce and interest rates went up accordingly. Only merchants of high financial standing were allowed to borrow money for the usual three months term at a rate around 1 per cent per month. Local native banks advance money to reliable merchants without security. The interest usually charged is 1½ per cent per month. The merchants privileged to borrow money from the native banks are classified in three grades; first grade, those entitled to borrow from \$3,000 to \$5,000 Taifu currency (\$1 Taifu currency=\$0.73 gold); second grade, those who are allowed to borrow \$1,000 to \$3,000 Taifu currency; and, third grade, those who are only allowed to borrow up to \$1,000 Taifu currency. The Chinese Government has issued regulations forbidding the future circulation of native notes by native banks, therefore only a few of these banks are allowed by the provincial government to issue their own notes.

GOVERNMENT DEMANDS AFFECT BANKING PROFITS—CREDIT EXTENSIONS.

Heavy demands by the provincial government for funds caused the Bank of Fukien to have a bad year in 1918. The net profits of this bank were \$120,000 Taifu currency in 1917, while in 1918 they were only \$20,000 Taifu currency. Its notes in circulation at the end of 1918 amounted to \$90,000 against \$220,000 Taifu currency at the end of 1917. Business was done on a small scale and the bank was forced to reduce the 11 agencies which existed in 1917 to the 2 now existing, one at Foochow, and the other at Kuanton.

MOVEMENT OF TREASURE.

The following table shows the imports and exports of gold and silver and silver coins through the maritimes customs during the years 1917 and 1918:

Movement of treasure.	1917	1918	Movement of treasure.	1917	1918
IMPORTS.			EXPORTS.		
From Hongkong.....	\$350,341	\$2,884,959	To Hongkong.....	\$2,562,473	\$3,672,197
From Chinese ports.....	3,031,141	3,370,787	To Chinese ports.....	2,978,172	2,838,013
Total imports.....	3,381,482	6,255,746	Total exports.....	5,540,645	6,510,210

The imports and exports for both years consisted almost entirely of silver coins. The 1917 imports of gold amounted to \$105,186 in value and the 1918 imports of this commodity amounted to \$48,197. This gold was used in the arts and not as money. The Chinese ports to which reference is made are principally Shanghai and Amoy. The excess of exports over imports decreased in value from \$2,159,163 in 1917 to \$254,464 in 1918, evidently on account of the increased demand at Foochow for silver for military purposes and on account of the increase in exports and the decrease in imports.

HARBIN.

CURRENCIES IN CIRCULATION—EXCHANGE RATES.

[Consul Dougals Jenkins, in Supplement to Commerce Reports, Apr. 8, 1920.]

The currency question continues to be deplorable. The value of the ruble is lower at present (July 9, 1919) than it has ever been, and there are no indications of immediate improvement. This makes it extremely difficult for people in Siberia to buy goods from abroad, and, as a result, the transit business through Harbin must be curtailed accordingly. There are at present in circulation in Harbin, Russian ruble

notes of the Imperial Government, of the former Provisional or Kerensky Government, of the Siberian or Omsk Government, and a number of other notes of a more or less private sort, such as those issued by the Chinese Eastern Railway and the Russo-Asiatic Bank, the municipality, and the Chinese exchange.

There are also in circulation a great many checks issued by merchants and other private establishments who find it difficult to make change. These checks are in more or less general circulation, and their values, of course, extremely doubtful. The notes of the Imperial Government are still at a premium, whereas those of the Omsk Government are at a discount. This difference in values in the currency causes no end of confusion and embarrassment in the transacting of ordinary business. It is apparent also that speculators are industriously engaged in hoarding the better class of notes and also all notes of smaller denominations, so that there is a difference in value between notes of 3, 5, and 10 ruble denominations and those of 250 and 1,000 rubles, although they may be of the same issue.

Serious fluctuations in the value of the ruble during the year (1918)—exchange varied from 6 to 20 rubles to the dollar—tended to upset business, because the ruble is the only currency in general circulation in this district.

HONGKONG.

SHORTAGE OF SILVER IN SOUTH CHINA.

[From Consul General, Hongkong, Aug. 26, 1919.]

The shortage of silver which has been felt for a long time all over the silver-using portions of the Far East has finally come to be acute in Hongkong and South China and has shown itself particularly in the shortage of subsidiary coins. The shortage of subsidiary coins in Hongkong is such that the colonial government has passed an ordinance prohibiting the export or carrying away of these coins in any amount except that a bona fide traveler may carry away coins not to exceed \$5 value. All the native newspapers in South China report a similar shortage of silver and especially of small coins in the interior. Apparently more than half the silver in circulation has been exported. The latter is doubtless due to the clandestine export of such coins to other parts of China and India. The shortage in Hongkong is not explained. The colonial government has retired and melted down large quantities of these coins in the past 10 years but reached a point three years ago when the subsidiary coins were at par with the corresponding standard dollar and there has been no trouble over

maintaining them at par ever since. Either the present shortage is due to the hoarding of these coins by persons planning a "corner" in them or else there has been smuggling of such coins out of the colony to secure the profit higher exchange value of silver in north China entails.

In spite of the fact that enormous quantities of both gold and silver have come from the United States to the Far East in the past six months there has been little change in the silver situation, for all such shipments of specie or bullion have been immediately absorbed, mostly by India. While exchange in Hongkong, by reason of bank manipulation under the ordinance affording control of silver and gold in the colony, has not advanced much in consequence, bankers now seem to agree that in spite of the shortage of bills on the United States exchange will continue high while the demand for silver in this part of the world will increase. So long as such conditions obtain, however, active trade in either import or export is not to be expected.

MOVEMENT OF BULLION AT HONGKONG.

[Consul General George E. Anderson, Hongkong, Feb. 27, in Commerce Reports, Apr. 14, 1920.]

For the first time since war conditions have obtained the Hongkong Government has commenced the publication of import and export returns for the movement of coin, bullion, and other treasure in and out of the colony, the figures for the last three months of 1919 being published in the trade returns for that quarter.

Two interesting features stand out in the returns. One is that considerable quantities of gold have moved from Siberia (Vladivostok) to Hongkong as the basis for advances made the Siberian Government in London. The total amount of gold received in Hongkong from Vladivostok is reported as 90,000,000 rubles. The amount received during the last quarter was the equivalent of \$19,033,996 gold. This sum was deposited in Hongkong banks, and loans for the Siberian Government were made in London upon it. The other feature of special interest is that the steady stream of gold and silver from the United States to India through Hongkong stopped during the quarter, India taking very little of the exports of either metal from Hongkong, though it is probable that eventually that country received a large portion of the sums exported to the Straits Settlements.

Hongkong's total imports of treasure for the quarter were valued at \$47,782,372 and the exports to \$37,482,832, leaving a net increase in the stock of gold and silver in the colony of \$10,299,540. Of the imports Vladivostok furnished, as stated, \$19,033,996, the United States \$17,606,712, and North China \$9,748,604, a large portion of the latter being in fact more or less direct shipments from the United States. The balance was made up of small imports from various countries. The chief points of export were the Straits Settlements, which took \$15,908,128; South China, which took \$12,438,044; the rest of China, which took \$2,521,700; and Siam, which took \$1,716,552. Ceylon, India, the East Indies, and the Near East took various smaller amounts.

HIGH EXCHANGE VALUE OF SILVER.

[Consul General George E. Anderson, in Supplement to Commerce Reports, Oct. 31, 1919.]

The high value of silver reached in 1917 was exceeded in 1918. The year opened with the Hongkong dollar (telegraphic-transfer rate) at 71½ cents American gold. It hovered around that rate until March when it began to advance and by June 30 had reached 78. It continued to rise until by the middle of August it had passed 80 cents, by the middle of September 85 cents, and by September 20, it had reached 87½ cents, where it remained for a short time and then gradually declined until the middle of October when it was again below the 80-cent point, where it remained until the close of the year. The extraordinary rates were based largely upon the scarcity of silver generally, and also upon the general trade and economic conditions. As in the previous year Hongkong financiers, under special legislation for the control of the movement of silver, kept the actual exchange rates below the parity of silver and corresponding rates of exchange at other points in the Far East affected by silver currency. That the policy was beneficial is unquestionably true.

The exchange situation during the year also was marked by the general effects of the shortage of silver in China which controlled the exchange situation in North China, and at the same time was felt by all lines of trade and industry. The prohibition of the export of silver from the United States prevented Chinese banks from obtaining their usual supply of silver to replace that absorbed by the interior districts, with the result that for a time it was a very serious matter as to whether or not they could secure

enough to protect their notes and supply the absolutely necessary needs of their customers.

During most of the summer and fall the stock of silver on hand in Shanghai banks rated something like 18,000,000 taels and corresponding amount in dollars as compared with the 30,000,000 taels and corresponding amount in dollars usually considered necessary for Shanghai business. This condition of course was reflected in Hongkong, but it is of decided significance that while business in Shanghai was seriously threatened by the shortage it was felt comparatively slightly in actual business in South China, the place of silver being taken very largely by Hongkong bank notes issued by Hongkong banks under Government control. This condition obtained in spite of the fact that up to November 1 there had been shipped out of Hongkong a total of \$23,602,226, compared with imports of only \$10,898,391. According to best commercial data there was exported during the year from Hongkong, practically all to India, a total of over \$30,000,000 as compared with imports of only about half that amount. Nevertheless, the situation in North China as well as in Hongkong was greatly relieved in the closing month of the year by the importation of silver then allowed from the United States.

The general effect of the shortage of silver and of the financial troubles attending it was much less unfavorable in South China than in the Yangtze Valley and North China. That it resulted in no more unfavorable effects in the southern field was due altogether to careful management on the part of Hongkong financiers and the soundness of banking institutions operated under British or other foreign laws. The essential weakness of Chinese finance was again illustrated. The shortage of silver naturally resulted in more or less serious restriction of credits, but during the whole of the year it is doubtful if any deserving enterprise or firm in South China was prevented from making proper imports of foreign goods or of financing sales in the United States and elsewhere by reason of the general financial situation.

The high exchange value of silver was the chief consideration in the export of Chinese products. With silver at 80 cents gold to the Hongkong dollar a Chinese product selling for a silver dollar in Hongkong naturally cost 80 gold cents instead of the 40 gold cents it cost two years ago. Only extraordinary demand for such products from the United States or other gold-standard country would justify purchase under the circumstances, and unless exchange falls China must sell its products for about half what it has heretofore received in silver or must expect to see its trade go to other countries producing goods upon a gold basis.

* * * * *

High silver exchange practically increased prices for Chinese commodities to double their ordinary cost in gold, and this, too, without benefiting the Chinese producer in any material way.

MUKDEN.

CURRENCIES IN CIRCULATION.

[Consul General E. Carleton Baker, in Supplement to Commerce Reports, Apr. 8, 1920.]

The currency of this district is in a most chaotic state. Business is transacted in the following currencies: Mukden taels, Shanghai taels, Newchwang taels, Newchwang transfer taels, Tientsin taels, Kalgan taels, Shansi taels, Mexican dollars, Peiyang dollars, Hongkong dollars, small-coin notes, tiao notes, gold yen, silver yen, large-dollar notes, and rubles. Some of these currencies are only used in special lines of trade. The Kalgan taels, for instance, are used only in payment for furs from the Kalgan region. Rubles are not used to any extent, except in the vicinity of Changchun. The tiao notes are principally used in the interior districts of the Kirin Province, and they are based upon copper cash. Tiao notes in some places are worth 160 cash and in others 64 cash.

It requires many years to become familiar with the currency conditions in this district. For this reason many foreign merchants handle only gold yen or small-coin notes. The former are very useful, inasmuch as they have an almost fixed value as compared with foreign currency. The small-coin notes are most generally used, however, as they are preferred by the native merchants, but their value is subject to the most violent fluctuations and they have exhibited a downward tendency in the last few years.

NANKING.

GREAT DEMAND FOR SILVER.

[From the bullion letter of Samuel Montagu & Co., London, Mar. 11, 1920.]

The following communication to the North China Herald by its Nanking correspondent throws considerable light upon the large and continued silver demand emanating from China: "The discount on paper money has risen to 18 or 19 per cent and this has shaken public confidence and made the business outlook uncertain. Certain concerns which have large dealings in paper have opened about half a dozen shops in various parts of the town. These 'shops' do only purchasing. They will buy anything—oil, hides, sugar, etc., pay for them in local paper and ship them to Hongkong. There the stuff is sold and the money deposited in a Hongkong bank. But the local people are left with the paper. Silver is being withdrawn from circulation and hoarded. Almost everyone has his pile, from the official down to the coolie—waiting for the rainy day. This mineral wealth is of no use to anybody at present, and its withdrawal from circulation is another factor in making the price of that metal rise. The White Miao in the northwest of the Province and on the borders of Kueichow, who grow the opium and sell it, will take payment only in silver. But this silver is of no use to them or anybody else. They wax rich, but they buy nothing. They still live as their forefathers did, and the precious metal is buried and untouched.

SHANGHAI.

EXCHANGE AND BANKING.

[Consul General Thomas Sammons, in Supplement to Commerce Reports, Oct. 15, 1919.]

To the business man, exchange conditions throughout the year have been incomprehensible, for, while silver attained a seemingly incredible level in 1917, it reached figures that could almost be said to be ridiculous in 1918. Exchange opened with 1 tael equaling \$1.02 (telegraphic transfer), and within a few days the tael went up to \$1.05; from then on, with occasional setbacks, it advanced until, on June 30, 1918, the value was \$1.1125. In July the quotation was \$1.115, and the official quotations of bankers were more or less nominal. In September, business was transacted at the rate of \$1.33, \$1.34, and \$1.35 to the tael, the nominal quotation being \$1.19. Upon the receipt of the news of the Bulgarian surrender in October the tael dropped to \$1.19. The signing of the armistice in November affected the market value of silver; the value of the tael ranged from \$1.25 down to \$1.19, and it stood at \$1.23 at the close of the year. (The dollar figures given in this paragraph refer to United States currency.) Local banks are said to have made large profits in exchange transactions.

Among the small Chinese banks there was a serious shortage of silver, with consequent high prices, toward the end of the year, and Chinese speculators rushing to buy gold. In this connection it may be explained that Chinese depositors withdrew practically all their ready cash from the native banks to meet their commitments for the purchase of gold from foreign banks, and if the foreign banks had not gone to the assistance of the native banks with large loans, said to be between 3,000,000 and 4,000,000 taels, there would likely have been a crash, involving serious consequences to the business community in general and the involuntary bankruptcy of some of the native banks. As it is, no failures have been reported, although several contracts have had to be carried over to another year.

Another cause for the shortage of silver coin is the alleged hoarding of silver on a large scale by the Chinese farmers. There is no doubt that the sale of crops brought considerable surplus money into the hands of farmers, and it is not improbable that they are hoarding it somewhere outside of the banks. The lack of ready cash during the latter part of the year caused the interest rate among Chinese money lenders to rise to a rate of over 25 per cent per annum.

THE SILVER SITUATION.

[From the Numismatist, April, 1920.]

The Numismatist quotes C. D. Komaroff, Far Eastern manager for Gaston, Williams & Wigmore, as follows:

"Within the last 18 months nearly 200,000,000 ounces of silver have entered the port of Shanghai. But none of it remained in Shanghai. It has not gone into circulation; it has not helped the exchange situation; it has simply 'evaporated.' All of it has gone into the interior—to Tientsin, Hankow, Harbin, and other points, not to

enter into common use, but to be hoarded, hidden away, lost from sight. To hoard silver is part of the Asiatic temperament. It can not be explained.

"Notwithstanding the flow of silver through Shanghai, the shortage of the metal has become so acute that the Foreign Bankers' Association of Shanghai in alarm has joined with the Chinese Bankers' Association to mint coin of their own. It must be understood that every bank issues its own notes, which must be protected by silver reserve. Because of silver scarcity most of the banks are unprepared to redeem their currency and unable to afford their customers all of the services called for. It is proposed to obtain a concession from the Chinese Government to permit the Shanghai banks to mint a sufficient percentage of incoming silver to give ample protection for currency outstanding. It is planned to coin sufficient republican dollars to help in financing all part of the country. This will give Shanghai enough silver for legitimate demands, help to check hoarding and ease the money market. It also is calculated to be a factor in stabilizing exchange. When I left Shanghai the plan was well advanced and, if government sanction be obtained, it will be put into effect within a few months."

This will not mean, asserted Komaroff, that the Chinese absorption of silver will suddenly cease. With the impending development of the country silver will be required in steadily increasing quantities for circulation purposes, while the hoarding propensity that has grown with centuries may not be shaken off for centuries to come.

SWATOW.

FINANCIAL CONDITIONS.

[Consul Myrl S. Myers, in Supplement to Commerce Reports, Dec. 30, 1919.]

A still further reduction in remittances from Chinese emigrants in Siam and the Straits Settlements occurred, due chiefly to the increased value of silver. This directly affects the trade of the region, as these remittances furnish much ready money for the purchase of imports.

Exchange on Hongkong and Shanghai fluctuated greatly, especially during the latter half of the year. The Hongkong dollar ranged between 2 and 11 per cent discount as compared with the Mexican, while the Shanghai dollar ranged between 1 and 8 per cent premium. The embargo on the export of silver from Hongkong was the chief reason for the discount of Hongkong currency. It may be said that Swatow interport exchange is regulated by the Hongkong money market. In order to conserve the supply of silver, the local native bankers entered into an agreement near the end of 1917 to refrain from exporting silver. This agreement was rescinded late in 1918. High premium on silver at Amoy for paying the troops induced exportation from here.

Runs on banks were fairly frequent but not serious. Near the end of the Chinese year (Jan. 31, 1919) several banks closed their doors, but only one actually failed, its liabilities, however, being not more than \$30,000 or \$40,000 (Swatow currency). The native banks, as during the past few years, conducted their business along very conservative lines. The money market, which was fairly easy during a great part of the year, became very tight in the last quarter. Interest rates, which generally ruled low owing to business stagnation, began to rise in November and reached \$1.40 per thousand per day for short-term loans to meet annual settlements. The average interest rate allowed on deposits was about 6 per cent. The bankers had a very poor year.

MOVEMENT OF TREASURE.

The movement of treasure is not included in the general trade returns. A general decrease occurred both in imports and exports and the excess of exports over imports dropped from \$2,059,122 in 1917 to \$1,507,804 in 1918, as shown in the following table, which gives the movement of treasure into and out of Swatow during 1917 and 1918:

Movement of treasure.	1917	1918	Movement of treasure.	1917	1918
IMPORTS.			EXPORTS.		
From foreign countries.....	\$709,296	\$454,556	To foreign countries.....	\$1,002,960	\$735,922
From Chinese ports.....	597,069	331,446	To Chinese ports.....	2,362,527	1,557,884
Total imports.....	1,306,365	786,002	Total exports.....	3,365,487	2,293,806

Foreign imports were almost entirely from Hongkong and Macao, 34 per cent of which, as compared with 60 per cent in 1917, was in gold and the remainder in silver coin. Chinese imports were from Shanghai and Amoy and also in silver coin. Exports to foreign countries were almost entirely to Hongkong and Macao, while exports to native ports were chiefly to Amoy. With the exception of \$21,500 in gold bullion to Siam, exports were in silver coin.

CYPRUS ISLAND.

The coinage executed at the London mint, for Cyprus, during the year ended December, 1919, was 400,000 9-piaster silver pieces, of the face value of £20,000 (\$97,330).

The monetary stock of the country in circulation on December 31, 1919, was: Gold coin, £290,800 (\$1,415,178); silver coin, £95,000 (\$462,318); Government notes, £674,822 (\$3,284,021).

Imports into and exports from Cyprus during the year ended Dec. 31, 1919.

DUTCH EAST INDIES—JAVA.

NEW PAPER CURRENCY—SHORTAGE OF MEDIA OF EXCHANGE.

[Consul Harry Campbell, Soerabaya, Java, Oct. 1, in Commerce Reports, Dec. 9, 1919.]

Much favorable comment has been heard locally concerning the new paper guilder currency that has recently been issued by the Java Bank. The notes are printed by an American company, and are generally recognized as being a great improvement over the old notes in circulation. They are attractively engraved on durable paper, and were so much prized by the Chinese and natives when first issued as to lead to hoarding, thus taking them out of circulation. The scarcity in coin and paper of small denominations has shown little improvement, and considerable inconvenience is being experienced in making change. The new issue of notes includes 2½-guilder and 1-guilder notes, intended to relieve the present scarcity of silver coins.

PAPER CURRENCY IS POPULAR.

[W. M. Anderson, in Commerce Reports, Jan. 6, 1920.]

The increase of the gold price of silver has been so great in recent years that the intrinsic value of the silver coinage is greater than its legal value. There is a scarcity of small money, which has been met by the issue of Government notes for 2½ and 1 guilders, which have been well received by the public.

Apart from these small notes, the Java Bank enjoys a monopoly of the issue of paper money in the Dutch East Indies; their notes are very popular and command the complete confidence of the public. The amount of gold in active circulation is very

limited, and instances are mentioned where the natives up country have refused gold, but gladly accepted payment in these notes. In this regard Java differs from British India, where the demand for hard coin and the hoarding habits of the natives have been, especially of recent years, a source of embarrassment to the Government and of great economic loss to the country.

FEDERATED MALAY STATES.

The amount of gold and silver withdrawn from monetary use during the year ended December 31, 1918, is not known.

No data available on amount of gold and silver used in the industrial arts, nor of United States gold coin and bullion imported during the calendar year 1918.

Production of gold during the year ended Dec. 31, 1918.

SCARCITY OF SMALL COINS.

[From the Economist, London, Mar. 1, 1919, p. 368.]

The scarcity of small coins in Japan has for several years been an increasing evil, and it has not been materially relieved by the issue of small notes of 50, 20, and as low as 10 sen—2½d. These scraps of paper, often in an extremely dirty state, are now the chief medium of exchange for small daily affairs, for even copper coin seems to be following the example of silver and gradually retiring into invisibility. Gold is practically never seen, but there is occasionally a complaint that the gold obtained from the Bank of Japan by conversion of notes is used illegally by jewelers and others. It is estimated that the total amount of gold coin melted down by these agencies reaches about 1,000,000 yen.

MESOPOTAMIA.

CURRENCY IN USE.

According to Commerce Reports of January 12, 1920, the coinage of British India is now being used in Mesopotamia.

NORTH BORNEO.

Stock used for monetary purposes on Dec. 31, 1918.

Character of stock.	In Govern- ment treasury.	In circulation.	Total used for monetary purposes.

LAWS AFFECTING THE CURRENCY.

By royal decree of January 27, 1919, the currency office, which is bound by the paper currency act, R. S. 121, to redeem in coin any amount of paper currency presented, was released from that obligation until further notice.

THE GOLD STANDARD ACT AMENDMENT ACT, B. E. 2462.

Whereas owing to the great rise which has taken place in the value of silver, it is desirable that certain changes shall be made in the gold standard act, R. S. 127:

Now, therefore, His Majesty the King is pleased to command as follows:

SECTION 1. Section 5 (3) of the gold standard act, R. S. 127, shall be repealed and the following substituted:

"The subsidiary silver coins shall contain 650 parts of pure silver and 350 parts of copper."

SEC. 2. Section 16 of the gold standard act, R. S. 127, shall be repealed and the following substituted:

"Gold coins and 1-tical pieces shall be legal tender without limit as to amount. As a temporary measure, 2-salung pieces shall also be legal tender without limit as to amount."

"One-salung pieces shall be legal tender only up to the value of 5 ticals, and nickel and bronze coins only up to the value of 1 tical."

Proclaimed on the 2d day of July, B. E. 2462 (1919).

THE GOLD STANDARD ACT AMENDMENT ACT (NO. II), B. E. 2462.

Whereas owing to the continued high price of silver it is expedient to raise the gold exchange value of the tical, in order to protect the issues of silver coinage:

Now, therefore, His Majesty is pleased to command as follows:

SECTION 1. Section 3 of the gold standard act, R. S. 127, is hereby repealed and the following substituted:

"The theoretical unit of the Siamese monetary system shall be the tical of 61 centigrammes of pure gold.

"The silver tical minted under the gold standard act, R. S. 127, and previous acts (except such issues as have already been withdrawn from circulation by official notification) shall, under this act, have a value equal to 61 centigrammes of pure gold, and the silver 2-salung piece (equal to half a tical), minted under the provisions of the gold standard act, R. S. 127, and of the gold standard act amendment act (No. 1), B. E. 2462, shall similarly, as a temporary measure, have a value equal to 30.5 centigrammes of pure gold.

"The tical shall be divided into 100 satangs."

SEC. 2. In sections 11 and 12 of the gold standard act, R. S. 127, the words "at the rate of 2459 ticals for every 100 ticals weight (1,500 grams) of pure gold tendered" shall be substituted for the words "at the rate of 2,680 ticals for every 100 ticals weight (1,500 grams) of pure gold tendered."

SEC. 3. In section 14 of the gold standard act, R. S. 127, the words "the value of 61 centigrammes of pure gold" shall be substituted for the words "the value of 55.8 centigrammes of pure gold."

Proclaimed on the 4th day of September, 2462 (1919).

THE GOLD STANDARD ACT AMENDMENT ACT (NO. III), B. E. 2462.

Whereas the price of silver continues to advance and it is necessary to make provisions for raising further the gold exchange value of the tical in order to protect the issues of silver coinage:

Now, therefore, His Majesty is pleased to command as follows:

SECTION 1. Sections 3, 11, and 12 of the gold standard act, R. S. 127, as amended by the gold standard act amendment act (No. II), B. E. 2462, together with the notification by the minister of finance relative to sections 11 and 12 of the gold standard act, R. S. 127, proclaimed on the 4th day of September, B. E. 2462, are hereby suspended.

SEC. 2. The minister of finance is authorized to continue to receive gold abroad and to fix the rate for the issue in Bangkok of legal currency in exchange at such amount, not exceeding 11.88 ticals for £1 sterling, as may be necessary to protect the silver coinage the minting of which was provided for in the gold standard act amendment act (No. I), B. E. 2462.

SEC. 3. The rates of exchange to be fixed from time to time under section 2 shall be published by the minister of finance in the Government Gazette, and shall come into force from the date of such publication.

Proclaimed on the 4th day of October, 2462 (1919).

By decree of January 16, 1920, the fineness of the subsidiary silver coins was further reduced to 500 thousandths, and the fineness tolerance thereof was raised to 7 thousandths.

CIRCULATION IN 1917.

[Consul General Edwin N. Gunsaulus, Singapore, in Supplement to Commerce Reports, Jan. 22, 1919.]

Excluding subsidiary coins, the currency of the colony in circulation at the end of the year 1917 consisted of \$49,437,774 in currency notes and \$3,767,019 in dollars and half dollars, while there were still in circulation notes issued by two leading banks to the value of \$96,487. The large increase of \$6,070,799 recorded in 1916 was still further increased by \$10,603,582, owing almost entirely to the issue of notes in exchange for gold in London. The coin reserve held by the commissioners at the close of the year against the note circulation amounted to \$30,101,218. By reason of the shortage of small silver in the latter part of 1917 it was found necessary to issue notes of smaller denominations, and by the end of the year \$183,965 worth of 10-cent notes had been issued.

GOLD EXPORTS.

[From Consul General Edwin N. Gunsaulus, Singapore, Apr. 21, 1919.]

The total gold exports for 1918 were 18,309 ounces, valued at \$345,246, compared with 18,154 ounces, valued at \$341,880, in 1917.

TRANSCAUCASUS.

[Commerce Reports, Feb. 13, 1920.]

According to Vice Consul Hooker A. Doolittle, Tiflis, Caucasus, on December 7, 1919, an American dollar at Tiflis was worth 170 rubles.

AFRICA.

ALGERIA.

FURTHER INCREASE IN ISSUE OF BANK OF ALGERIA NOTES.

[From Commerce Reports, Oct. 31, 1919.]

Ambassador Wallace reports from Paris that a decree dated September 18 has authorized a further increase in the maximum issue of notes of the Bank of Algeria and its branch offices, the fixed maximum issue being 1,200,000,000 francs.

BELGIAN CONGO.

The production of gold from all sources during the year ended December 31, 1919, was 3,355 kilograms (107,863 ounces).
The monetary stock of the country on December 31, 1919, was: Silver coin, 25,860,000 francs (\$4,990,980); notes of banks of issue, 15,000,000 francs (\$2,895,000); all in circulation.

ACTION TO RESTORE GOLD TO CIRCULATION.

[From the Commercial and Financial Chronicle, New York, Nov. 15, 1919.]

The following is taken from the New York Evening Sun of last night (Nov. 14):
 "Mail advices received here say that an economic conference held at Pretoria, South Africa, has decided to recommend drastic measures in order to restore gold to circulation and to provide against the inflation of the paper currency.
 "In order to attain the former object the conference urges the establishment of a mint and refinery, the termination of the selling agreement with the Bank of England, and the removal, after the establishment of a mint, of any embargo on the export of specie."

CREATION OF A MINT FOR COINAGE.

[From Commerce Reports, Oct. 25, 1919.]

The creation of a mint in the Union of South Africa was provided for in legislation passed by the Union Parliament in June. The mint will be a branch of the royal mint so far as gold coinage is concerned. This insures that the output will be legal tender throughout the Empire.
 The creation of the mint was strongly urged by the mining interests, as it will greatly add to their profits, and will no doubt relieve them from many of the diffi-

culties which now beset the industry. The mines exist now entirely by selling their gold. Their realization costs amount to 1s. 2½d. (\$0.29) per ounce, a sum which includes exchange, freight, and Bank of England commission. This, in its totality, represents a sum of about \$2,710,640 subtracted from the profits of the mines. Much of the biggest part of this expense could be saved, the mining men claim, if the gold coming out of the reef could be minted on the spot and thus made marketable in the form of pounds sterling within the country. During the war period the charges were considerably higher, aggregating a loss of \$4,705,900 a year.

NOTE.—The new mint is to be located at Pretoria.

FINANCIAL SITUATION.

[Vice Consul Charles H. Heisler, Cape Town, Nov. 28, in Commerce Reports, Jan. 22, 1920.]

In view of the recent suggestion that the Union Government should authorize an inconvertible issue of notes, it is of some interest to observe the present position of the note issues of the country. On the eve of the war the legal-tender notes in circulation amounted in value to £1,083,677 (\$5,273,714). To-day they stand at £2,246,562 (\$10,932,894). Other note issues in circulation totaled in 1914 £1,066,671 (\$5,190,954). To-day they stand at £4,546,312 (\$22,124,627). The total note issue of 1914, when there was a tendency toward restricting the use of paper, was £2,150,348 (\$10,464,669). On September 30, 1919, the figure stood at £6,792,874 (\$33,057,521). The coin and bullion in the hands of the banks in 1914 amounted to £6,913,000 (\$33,642,115). To-day it stands at £7,100,000 (\$34,552,150).

BRITISH WEST AFRICA (GOLD COAST).

The production of gold from deep mines during the year ended Dec. 31, 1919, was 295,226.07 fine ounces (\$6,102,864).

The amount of government notes in circulation on December 31, 1919, was £3,959,495 (\$19,268,882).

THE MONETARY CIRCULATION.

[From the Bankers' Magazine, London, February, 1920.]

According to the report of the West African Currency Board for the year to June 30 last, says a writer in the Morning Post, the termination of hostilities brought about a demand for currency in West Africa vastly in excess of all local expectations. The board's stock of silver coins in West Africa was quickly exhausted, and, while regular shipments from England were maintained, they could not be materially increased because a larger quantity of silver could neither be obtained nor minted. It accordingly became necessary to extend the use of the West African currency notes, which were made legal tender in the Gold Coast, Sierra Leone, and the Gambia, as they had always been in Nigeria. These notes were issued in West Africa against payment wholly in London. It was found necessary, in order to provide as much silver currency as possible, to release the stocks which were held in reserve, and in March the board was empowered to defer the encashment of notes for three months, which period was subsequently extended for a further six months. During the year the nominal value of silver coin put into circulation was £1,414,934, and the net issue of currency notes was £2,306,895.

BRITISH WEST AFRICA—NIGERIA.

The silver coinage executed in Great Britain, for Nigeria, during the year ended December 31, 1919, was £773,150 (\$3,762,534).

The estimated quantity of gold used in the industrial arts during the year ended December 31, 1919, was 1,500 fine ounces, or £8,250 (\$40,149). It is impossible to obtain data as to amount of silver jewelry, plate, etc., used for industrial purposes.

The production of gold for the year ended December 31, 1919, was 319 fine ounces, or £1,276 (\$6,210).

The gold production for the years 1918 and 1917 was 1,415 ounces (\$29,251) and 2,868 fine ounces (\$59,287), respectively.

The stock of silver and notes used for monetary purposes on December 31, 1919, was: Silver coin, £5,804,900 (\$28,249,546); Government notes, £2,499,495 (\$12,163,792).

NOTE.—In addition, there are notes in reserve to the amount of £717,500 (\$3,491,714). There is no gold in circulation. The currency of the country consists of currency notes, silver coins, and nickel-bronze coins; also manillas.

The gold, silver, and copper coins of Great Britain are all legal tender in Nigeria, but they are very seldom seen.

The British West African silver coins of 2 shillings, 1 shilling, 6 pence, and 3 pence are of the same weight and fineness as the similar coins used in Great Britain.

British West African nickel-bronze coins of 1 penny, one-half penny, and one-tenth penny are also used.

Imports into and exports from Nigeria during the year ended Dec. 31, 1919.

SPECIE IMPORTS AND EXPORTS—CIRCULATION.

[Consul W. J. Yerby, Dakar, Senegal, in Supplement to Commerce Reports, Dec. 17, 1919.]

The imports of specie in 1918 amounted to \$4,356,238 (£=\$4,866), as against \$8,389,680 in 1917; and the exports amounted to \$257,353 in 1918 and to \$610,119 in 1917. There is estimated to be nearly \$25,000,000 worth of coin in circulation in Nigeria. The coins current are: British gold, silver, and bronze, West African silver coins, and Nigerian nickel-bronze coins.

FLUCTUATION OF EXCHANGE.

[Vice Consul Ernest E. Evans, Tangier, in Supplement to Commerce Reports, Dec. 11, 1919.]

The circulation in Morocco of various currencies renders the question of exchange one of more than ordinary complexity. The Hassani or native silver currency, which for many years was at a discount varying between 50 and 25 per cent in relation to francs, rapidly appreciated in value during the latter part of 1917 and has now been officially fixed at par with francs. This change has proven beneficial to the natives, who sell their produce for Hassani coin, which under the conditions above described has increased in purchasing power, in respect to imported articles, the cost of which is based upon the franc or the pound sterling. Francs and Hassani currency being now equivalent, commercial transactions have become simplified in the French zone, where the franc has almost entirely driven the Spanish peseta out of use.

By treaty, Spanish currency is legal tender throughout Morocco, and the abnormal appreciation of the peseta is an important cause of the enhanced cost of living, owing to the fact that Morocco is relying upon Spain for many articles, among which are all varieties of fruits and vegetables, the staple foodstuffs of the poorer classes. On the other hand, these conditions have limited the development of Spanish-Moroccan trade in manufactured goods, as the difference in exchange in favor of the peseta has brought about a corresponding increase in the cost of Spanish manufactures as compared with similar goods obtainable in France or in Great Britain.

The local exchange of these various currencies, in relation to the American dollar, follows the Paris or Madrid quotations, with a further difference of one or two points against the dollar.

Soon after the signing of the armistice the premium on the Spanish peseta as against francs and pounds sterling rapidly dropped to about 15 per cent and remained in close proximity to this rate up to the end of 1918.

MADAGASCAR.

GOLD PRODUCTION FOR 1917 AND 1918.

[Vice Consul E. A. Feibelman, Tananarive, in Supplement to Commerce Reports, Mar. 3, 1920.]

The production of gold amounted to 844 kilos, 191 grams (27,141 Troy ounces) in 1918, against 35,548.78 Troy ounces in 1917.

FINANCE AND BANKING.

[Consul Harris N. Cookingham, Tunis, in Supplement to Commerce Reports, Jan. 28, 1920.]

The relative prosperity of the Regency throughout 1918, despite the greatly disturbed conditions, is suggested by heavy native investments in lands, flocks, and other forms of wealth rather than reflected in any important banking transactions during the year. Partly on account of the complexity of the Tunisian financial system, tributary to that of France through the Algerian organization, and partly because of the rich Arabs' innate preference for material holdings rather than bank stock, the banking institutions and trust companies of the Regency do not show the country's real economic situation. Indeed, the banks of Tunis are apparently dependent largely upon foreign business and perhaps for that reason comprise for the most part branches of foreign banking houses, chiefly French.

The Banque de Tunisie, which is an incorporated company, nowise official, having an announced capital of 8,000,000 francs, is one of the few banks with head offices in the Protectorate; but neither this nor any of the branch banks publishes a periodic statement of its condition, except the Banque de l'Algerie, which occupies the somewhat anomalous position of depository for the Tunisian Government. The report of the situation of the Banque de l'Algerie on December 31, 1918, showed assets of 2,392,428,675 francs (as compared with 1,619,844,913 francs on December 31, 1917), of which total 1,178,659,510 francs represented the accounts of the banks' various branches, 441,847,880 francs the portfolio, 215,989,952 francs advances on title deeds, and, among various other items, 1,000,000 francs an advance to the Tunisian Government; the bank's liabilities included, in addition to the capital of 25,000,000 francs, and reserves of about 31,000,000 francs, its account of 1,110,525,037 francs with its agencies, 11,242,440 francs of the Tunisian treasury, and bills payable to the bearer, issued by the bank to the value of 909,408,810 francs.

SCARCITY OF METALLIC CURRENCY.

By conventions with the French Government and successive decrees of the Tunisian Government, this quasi-official relation of bank and State, by which the Banque de l'Algerie is granted certain specified privileges in Tunis in exchange for the special

advantages to accrue to the Protectorate by virtue of the convention, will be maintained until 1945. Until that date this bank may issue bank notes which will be accepted as the legal tender throughout the Regency. French money, however, circulates here widely. In fact, the growing scarcity of currency, accentuated by the gradual withdrawal from circulation of silver coinage (imputed to the Arab instinct for hoarding treasure), even brought into daily use an increasing number of foreign copper coins, particularly Italian centesimi and English pennies, which were accepted without question as mediums of exchange at par with the French and Tunisian coinage.

To relieve this irregular condition the Tunisian Government by decree of February 16, 1918, authorized the director of finances of the Regency to make up the temporary deficiency of metallic, especially silver, currency by an emission of small bank notes, paper tokens of the denominations of 2 francs, 1 franc, and 50 centimes, the aggregate monetary value of which should not exceed the total of the profit still to be made by the Government on its previous coinage of metallic currency; and it was further provided that these tokens, which should be guaranteed by the deposit at the Banque de l'Algerie of bonds or title deeds of the national-defense loan, were to be retired from circulation not later than two years after the cessation of hostilities. The first issue of the war paper by the Regency of Tunis was limited by the decree to 900,000 francs in monetary value; the success of this tentative emission was tacitly acknowledged by a later decree authorizing the issuance before harvest time of a second series of 50 centime, 1 franc, and 2 franc notes to the number of 2,100,000 and the aggregate value of 2,100,000 francs.

FINANCIAL SITUATION UNSETTLED.

With the free circulation throughout Tunis of the fiduciary currency, domestic tender was regularized. Foreign trade, however, penalized in 1918 by a drop in the exchange value of the franc (following invariably the Paris Bourse) so disadvantageous as to discourage unnecessary purchases, showed throughout the year the effect of the handicap, in a money market rarely active even under less adverse conditions.

But the situation was fundamentally less insecure than unsettled. Although the period proved almost inevitably unfavorable to a few great enterprises, the State's finances indicated the essential stability of the Tunisian Government's resources.

RESERVE FUNDS AT THE CLOSE OF 1917.

The Tunisian treasury itself showed at the close of 1917 reserve funds of 13,912,315 francs.

AUSTRALIAN BANKS HOLD \$100,000,000 IN GOLD.

[From the Journal of Commerce, New York, May 21, 1919.]

MELBOURNE, April 2.—At a recent session the acting prime minister stated that it was absolutely impossible until peace was signed to allow free export from the Commonwealth of gold, but the Federal Government might grant export permits to producers within certain limits. He suggested that the system should be given a trial for, say, three months, and that the exports should not be permitted to go beyond allied or neutral countries, but kept under such restrictions as would prevent their reaching enemy countries.

The minister said the Australian banks had over £20,000,000 (\$100,000,000) worth of gold in their vaults, but as it might be necessary later on for the Commonwealth to deal with that in connection with their currency arrangements he did not propose to issue export permits to the banks, but to gold producers only.

GOLD INDUSTRY.

[From Commerce Reports, May 12, 1919.]

HIGH PRICE OF GOLD.

The action of the Government in permitting the export of gold under license has had a decidedly good effect on the gold-mining industry, which has hitherto been described as in a moribund condition. The gold exporters get £5 (\$24.33) per ounce in China, as against about £4 (\$19.47) in Australia.

According to a recent item in the Melbourne Daily Argus, the Victorian minister of mines believes the policy of exporting gold to be economically unsound. He argues that the gold reserve should be increased in order to augment the credit of the country. Since for every ounce of gold sold to the mint the Commonwealth may issue twelve £1 notes, the minister believes the Commonwealth can better afford to meet the eastern price of gold than to allow it to be shipped out of the country.

NEW GOLD DISCOVERY.

Rich specimens of the ore broken in the mica vein on the Hill End field have been brought into Bathhurst. The largest specimen, says the Sydney Morning Herald, weighed 10 pounds and was estimated to carry 10 ounces of gold. The smaller specimens were equally rich, and were similar to those in four bags lodged for safety in the lockup at Hill End pending treatment.

It is stated that the reef is 4 inches wide at best, and varies freely, even changing within 3 feet.

SOVEREIGNS VANISH FROM CIRCULATION.

[From Samuel Montagu & Co., London, Mar. 20, 1919.]

Sovereigns have almost vanished from circulation and people seem satisfied with the change. The Australian Federal treasury, so cables the Times correspondent from Sydney, holds £23,228,000 in gold against a note circulation of £57,035,000.

NEW ZEALAND.

GOLD STOCK AND NOTE CIRCULATION.

[Consul General Alfred A. Winslow, Auckland, Jan. 23, in Commerce Reports, Mar. 5, 1920.]

The paper currency of the country at the close of the year (1919) was \$35,303,596, and the coin and bullion was valued at \$38,262,442, as compared with \$32,905,837 and \$45,913,821 at the close of 1918, and \$12,722,160 and \$30,216,648 at the close of 1914, respectively. This shows a much greater increase in the paper currency of the Dominion for 1919 over 1914 than does the increase of coin and bullion. Counting the population of New Zealand at 1,200,000 the paper currency represents about \$40 per capita, with something over \$40 per capita in coin and bullion, which indicates a very healthy condition. (The above amounts have been converted at the rate of \$4.8665 to the pound sterling.)

GROWTH OF WORLD PAPER CURRENCY DURING AND SINCE THE WAR.

[From the Commercial and Financial Chronicle, New York, Jan. 31, 1920.]

World paper currency has increased 600 per cent since the beginning of the war, while the gold reserve behind it has increased but 40 per cent. The face value of the paper currency of 30 principal countries of the world aggregated \$7,250,000,000 in 1914, \$40,000,000,000 at the date of the armistice, and \$50,000,000,000 in December, 1919, these figures being exclusive of the \$34,000,000,000 of paper issued by the Bolshevik Government. Meantime the bank deposits and consequent use of checks as a circulating medium have correspondingly increased and the world national debts have grown from \$40,000,000,000 in 1914 to \$260,000,000,000 in 1919. This is a summarization of a study of world currency and indebtedness, prepared by O. P. Austen, statistician of the National City Bank of New York, and appearing in the January number of *The Americas*, issued by the bank. It shows in detail the note circulation and gold reserve in each of the 30 principal countries of the world in July, 1914, November, 1918, and December, 1919, utilizing the official figures of the State banks of the European countries, and in the case of the United States figures supplied by the Treasury Department, all figures of foreign currency being transformed into United States dollars as at the prewar face value of the respective currencies.

The four Central Powers, Germany, Austria-Hungary, Turkey, and Bulgaria, show an advance in note circulation from \$1,200,000,000 in 1914 to \$12,300,000,000 at the close of the war, and \$18,770,000,000 in December, 1919, the gold reserve falling from \$600,000,000 in 1914 to \$327,000,000 in 1919, the ratio of gold to notes declining from 49.7 per cent in 1914 to 5.5 per cent in November, 1918, and 1.7 per cent in December, 1919. The allied group of 18 countries (including Russia up to October, 1917) shows notes aggregating \$4,900,000,000 in 1914, \$25,000,000,000 in November, 1918, and \$30,000,000,000 in December, 1919, their gold reserves \$3,763,000,000 in 1914 and \$5,070,000,000 in 1919, the ratio of gold to notes declining from 76.6 per cent in 1914 to 20.9 per cent in November, 1918, and 17.1 per cent in December, 1919. The eight principal neutrals named aggregated \$1,166,000,000 of the notes in 1914 and \$2,420,000,000 in 1919, their gold reserve increasing from \$516,000,000 to \$1,450,000,000, and their ratio of gold to notes advancing from 44.3 per cent in 1914 to 59.9 per cent in 1919. In the case of the United States the figures supplied by the Treasury Department show note circulation at \$1,056,000,000 in June, 1914, \$3,643,000,000 in November, 1918, and \$4,051,000,000 in December, 1919, the gold reserve \$1,023,000,000 in 1914 and \$2,107,000,000 in 1918, and the ratio of gold to notes 99.6 per cent in 1914, 63.2 per cent in November, 1918, and 52.3 per cent in December, 1919, these figures of notes being exclusive of the gold and silver certificates which are considered as "warehouse receipts" for an equivalent amount of metal deposited with the United States Treasury. The statement in condensed form is as follows:

Paper circulation and gold reserve in 1914, 1918, and 1919, transformed to United States dollars at normal (prewar) values of the currencies of the respective countries.

[In millions of dollars.]

¹ At average price of a fine ounce of silver in New York, \$0.98446 in 1918 and at \$1.12087 in 1919.

**WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY
AT THE CLOSE OF THE YEARS 1918 AND 1919.**

The following compilations have been made from such data as are available—avowedly incomplete. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coin as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted to bullion.

Monetary stocks of the principal countries of the world.

END OF CALENDAR YEAR 1918.

1 Gold and silver certificates not included, as they represent those metals, dollar for dollar.
2 State bank figures only.
3 Fluctuates with price of silver.
4 All except \$4,246,000 are German marks.
5 Monetary standard not established.
6 Shanghai stock only.
7 Government Currency Department only.
8 Does not include metallic reserve in Government Treasury.
NOTE.—Figures given represent each country's stock at the end of the year, except where otherwise indicated. Population figures are from the Statistical Abstract of the United States, 1917. Blanks indicate no figures available, rather than no stock. Gold held abroad as follows, not included in above figures: Argentina, \$96,062,428; British Honduras, \$250,000; Ecuador, \$4,986,545; Netherlands, \$18,026,670; Rumania, \$338,160,300; France, \$338,160,300; Egypt, \$15,831,811; Haiti, \$500,000; Straits Settlements, \$21,479,267.

Monetary stocks of the principal countries of the world—Continued.

Production of gold and silver in the world since 1860.

[The annual production of 1860 to 1872 is obtained from 5-year period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint.]

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1918

REPORT OF THE DIRECTOR OF THE MINT.

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 17, 1918.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1918, being the forty-sixth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1917.

OPERATIONS OF THE MINTS AND ASSAY OFFICES.

The fiscal year 1918 was for the Mint Service the most active in its history, the three coinage mints at Philadelphia, San Francisco, and Denver working 16 to 24 hours per day for the greater part of the year to keep up with the demand for coin of denominations below the dollar.

The unprecedented demand for fractional coin is doubtless due to war activities—general acceleration of business transactions requiring more frequent settlements; larger earnings of the people, resulting in more expenditures; demands of camp activities, etc. Internal revenue taxes on amusement entrance fees and on numerous other services, as well as increased street car fares and additions to other prices, required many 1-cent pieces.

Notwithstanding our 24-hour-a-day, working-to-capacity basis, for weeks our orders for coin exceeded the supply; but by the close of the year all orders had been filled and a considerable stock of each denomination of the fractional coins had been accumulated. The 1918 domestic coinage has never previously been equaled, totaling 714 million pieces, compared with 406½ million in 1917 and 155 million in 1916. In addition there were executed in 1918 for foreign Governments 52 million pieces of coins and blanks. Percentage comparisons give, on domestic coinage, 75½ per cent higher in 1918 than in 1917, and 362 per cent higher in 1918 than in 1916; on combined domestic and foreign pieces executed, 80½ per cent higher in 1918 than in 1917, and 269½ per cent higher in 1918 than in 1916.

SILVER DOLLARS CONVERTED TO BULLION.

An unusual feature of the year was the conversion of over 68 million silver dollars into bullion, this being responsible for much overtime in the melting rooms during April, May, and June, at the Philadelphia and San Francisco Mints and New York Assay Office. This work was materially facilitated by use of the electric furnace

installed the previous year at the Philadelphia Mint. The conversion of silver dollars to bullion was in accordance with the act of April 23, 1918, printed elsewhere in this document. The bullion was used to assist foreign Governments at war with the enemies of the United States.

PLATINUM DEPOSITS.

Receipt and determination of values of platinum deposits, refining of platinum and its manufacture into shapes for use of Government institutions, particularly in connection with war work, has been an important feature at the New York Assay Office.

The platinum work has been materially extended during the past year. Platinum deposits had not previously been accepted by the Government, that obtained being recovered in our refineries from deposits of gold and silver containing small quantities of the metal.

Cooperating with the War Industries Board, platinum deposits were accepted at the New York Assay Office after April 25; and to June 30, 1918, 269 deposits requiring 350 assays were received. By August 26, 1918, these deposits had increased to 867 requiring 1,002 assays, ranging in quantity from one one-hundredth to several hundred ounces each, and consisting of grains, sponge, fine platinum, jewelers' and dental scrap, etc.

In January, 1918, the New York Assay Office received, to be refined and prepared for United States war uses, a large shipment of Russian platinum in the form of grains and nuggets, consisting of 20,922.89 gross ounces. This was all refined, much of it to a fineness of 0.999 and above, by the end of the fiscal year; from it was obtained 17,639.892 fine ounces platinum; 64.751 fine ounces palladium; 182.113 fine ounces iridium, and 48.563 fine ounces rhodium.

For Ordnance Department uses the platinum is made into the form of sponge, platinic chloride, and wire drawn to a diameter of $\frac{3}{16}$ inch. For use of Government laboratories over 250 platinum articles of various kinds were manufactured during the year.

To meet the platinum situation it was found necessary to establish at the New York Assay Office special divisions for receiving, for assaying, and for melting and refining. Special furnaces have been designed and an original system of electrolytic refining of metals of the platinum group evolved, by the superintendent of the melting and refining department, Mr. B. P. Wirth. These devices have given results which are believed to be second to none.

DEPOSITS OF GOLD AND SILVER.

The work incident to receipt, determination of value, and payment for deposits of gold and silver bullion continues to be largely increased over prewar years, many more individual deposits being received. These include a number of Red Cross and similar deposits of contributed jewelry and household plate that under ordinary circumstances would not have reached the melting pot; also foreign bullion that was diverted by uncertain shipping conditions from the usual European channels.

REFINERIES.

The refineries of the Mint Service did excellent work during the fiscal year 1918, the output being 15 per cent greater than for the prior year and the stock of unrefined bullion on hand at the close of

the year being about 22½ per cent less than that of the prior year. The more favorable results were particularly noticeable at the San Francisco institution, which operated its refinery the full year as against five months the previous year, and where the output was more than tripled. The New York refinery met an increased demand of the industries for gold of high fineness, notwithstanding the large expansion of the platinum work. Our refinery output is of very high grade—of fineness nine hundred and ninety-nine thousandths and above.

CONFERENCE OF MINT OFFICIALS.

A conference of mint officials was held in September, 1917, meeting at the San Francisco and Denver Mints and inspecting the Seattle Assay Office and the Carson City Mint. The Director of the Mint, a representative of the Secretary's office, and the superintendents and heads of departments of the larger mint institutions were present. Exchange of experience in administration and operation and inspection of varying equipments led to a number of suggestions which should materially increase the efficiency of the Mint Service.

INSTITUTIONS OF MINT SERVICE.

There has been no change for several years in the number of active Mint Service institutions, those operated during the year ended June 30, 1918, being: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which has a large trade in bars of fine gold and silver; mints at New Orleans and Carson City conducted as assay offices, and assay offices at Seattle, Boise, Helena, Salt Lake City, and Deadwood, these being bullion-purchasing agencies for the large institutions. Refineries were operated at the New York, Denver, and San Francisco institutions.

MINOR ASSAY OFFICES.

The activities of the minor assay offices are limited by lack of appropriations sufficient to permit them to accept all business available to them, and if the policy followed since 1915 of endeavoring to extend the usefulness of these offices to the mining industry is to be fully realized, increased appropriations are imperative.

At some of these offices, particularly at Carson City and Salt Lake City, the number of deposits, as well as their value, materially increased during the fiscal year 1918. Additional employees are needed at both to properly handle the work coming to them and provide efficient service. At Carson City the number of deposits increased 12 per cent and their value increased 92½ per cent over last year.

The making of ore assays at a nominal cost continues to be a useful service to the mining industry of the West, as is evidenced by the larger patronage since adoption of this policy in 1915. At the Salt Lake City office the number of these assays has nearly doubled during the past year, their total being 1,042, which includes 480 assays made on samples submitted by the General Land Office and the Forest Service.

Alaska continues to be the source of most of the gold received at the Seattle Assay Office, but, as usual, substantial quantities were received during the past year from the Yukon and British Columbia.

GOLD OPERATIONS.

The value of the gold acquired by the Government at the mints and assay offices during the fiscal year 1918 was \$303,056,486.50. United States gold coin received for recoinage was of value \$6,431,235.68; transfers of gold between Mint Service offices totaled \$17,426,122.17; making an aggregate of gold handled by the Mint Service during the fiscal year 1918 of \$326,913,844.35.

SILVER OPERATIONS.

Passage of the act of April 23, 1918, had the effect of stabilizing the price of silver at \$1 per fine ounce, which price has been paid for all silver acquired by the Mint Service since that date. Prior thereto our purchase price fluctuated, during this fiscal year, between 77 cents (paid in July) and \$1.15 $\frac{1}{4}$ (paid in September, 1917). Silver has not previously reached so high a price in many years. The average cost per ounce for the silver acquired during the fiscal year was 95+ cents. About one-half as much silver as is produced in the United States during a year was acquired by the Mint Service during the past fiscal year, the total being 34,211,367.91 fine ounces, costing \$32,643,809.61; the silver received and repaid to the depositors thereof in bars bearing the Government stamp totaled 1,834,907.18 fine ounces; the United States silver coin received for recoinage totaled 478,611.09 fine ounces with recoinage value of \$661,636.21; silver dollars aggregating 7,697,722.54 fine ounces, having face value of \$10,017,000, were received from other Treasury offices for melting; Philippine silver coins received for recoinage totaled 1,910,998.01 fine ounces; the transfers of silver between Mint Service offices totaled 4,232,789.43 fine ounces, making an aggregate quantity of silver handled by the Mint Service during the fiscal year 1918 of 50,366,396.16 fine ounces. This is about 2 $\frac{3}{4}$ times the quantity handled last year, the large increase being due principally to the extraordinary demand for subsidiary silver coin.

COINAGE.

The United States coinage for the fiscal year 1918 amounted to \$43,596,895.91, of which \$35,004,450 was silver, \$4,136,163.90 was nickel, and \$4,456,282.01 was bronze. There was no gold coined during the fiscal year.

There were also coined at the Philadelphia Mint 8,980,000 nickel pieces for Ecuador; 1,000,000 nickel pieces for Salvador; and 800,000 gold planchets in addition to 9,500,000 nickel coins for Peru. The mint at San Francisco coined for the Philippine Islands 16,968,341 silver, 3,000,000 nickel, and 12,500,000 bronze pieces. Total number of foreign pieces executed, 52,748,341.

The seigniorage on United States coinage executed totaled \$20,538,055.58, of which \$13,279,648.34 was on subsidiary silver coins and \$7,258,407.24 was on minor coins.

STOCK OF COIN AND BULLION IN THE UNITED STATES.

On June 30, 1918, the estimated stock of domestic coin in the United States was \$2,068,153,106, of which \$1,336,780,596 was gold, \$499,515,930 was silver dollars, and \$231,856,580 was subsidiary silver coin.

The stock of gold bullion in the mints and assay offices on the same date was valued at \$1,738,559,152.15, an increase over last year of \$188,201,169.39, and the stock of silver bullion was 14,895,910.79 fine ounces, an increase over last year of 4,841,493.98 fine ounces.

PRODUCTION OF GOLD AND SILVER.

The production of the precious metals in the United States during the calendar year 1917 was as follows: Gold, \$83,750,700; and silver, 71,740,362 fine ounces.

INDUSTRIAL ARTS CONSUMPTION OF GOLD.

The amount of gold consumed in the industrial arts during the calendar year 1917 was \$52,915,641, of which \$34,803,445 was new material. Silver consumed amounted to 27,039,845 fine ounces, of which 15,998,807 fine ounces was new material.

Approximately \$64,000,000 worth of gold bullion, or more than half that issued by the Mint Service during the fiscal year 1918, is estimated to have been for use in the arts.

EXPORT OF GOLD COIN.

The net export of United States gold coin for the fiscal year ended June 30, 1918, was \$121,836,033.

LEGISLATION SUGGESTED.

Legislation suggested last year is still much needed in order to increase the efficiency of the Mint Service, viz: Increase of the minor coinage metal fund from \$200,000 to \$400,000, and a permanent indefinite appropriation for the purchase of metals to alloy gold and silver for coinage.

ESTIMATES FOR THE FISCAL YEAR 1920.

The total of estimates for the Mint Service for the fiscal year 1920, including the office of the Director in Washington, is \$1,782,530, which compares with estimates of \$1,662,980 for the fiscal year 1919 and appropriations for the latter year of \$1,661,280.

APPROPRIATIONS, EXPENSES, AND INCOME.

The appropriated amounts available for Mint Service use during the fiscal year 1918 totaled \$2,125,333.67, reimbursements to appropriations for services rendered amounted to \$259,541.68, making an available total of \$2,384,875.35.

The expenses chargeable to appropriations were \$2,125,504.78; those chargeable to income \$71,764.53; total, \$2,197,269.31.

The income realized by the Treasury from the Mint Service totaled \$22,804,037.37, of which \$20,538,055.58 was seigniorage.

ELECTRIC FURNACE.

Operation at the Philadelphia Mint of a 1,000-pound Rennerfelt electric melting furnace constantly throughout the year has demonstrated that melting silver, nickel, and bronze alloys by electricity

The cost to melt our most refractory alloy—i. e., cupro-nickel—in this electric furnace is \$9.45 per net ton, which is less by 50 per cent than we show with gas and crucible furnace melting.

ADDITIONS AND IMPROVEMENTS.

PHILADELPHIA MINT IMPROVEMENTS.

No new machinery has been completed in the mechanical department of the Philadelphia Mint during the past fiscal year, for the reason that every effort has been made to keep the machinery already in use running day and night.

Several experiments, which give promise of success, have been conducted on labor-saving devices, one of which is a power baling machine for pressing strips from which coinage blanks have been punched, into bales weighing, approximately, 30 pounds, of size 6 by 6 by 12 inches. Another is a coin cleaning, washing, and drying machine, all in one unit; the annealed blanks will be dumped into a tumbling hopper, then carried automatically through the different washing solutions, then into a drying drum, from which they will be dumped into boxes ready for the coining presses. The operation is entirely automatic, the blanks requiring no handling after they are delivered into the hopper from the annealing furnaces. These two machines are expected to be in operation at an early date.

The Steuben lift-truck system has been installed. This improved system of trucking eliminates all unnecessary handling of ingots, clippings, and blanks, as one movement of the handle will lift 3,000 pounds. The load can be moved to the different departments and unloaded by simply pressing a foot lever.

DENVER MINT IMPROVEMENTS.

Several changes have been made at the Denver Mint with a view to increasing its capacity. The ingot-melting room has been enlarged by taking over the room formerly occupied by the superintendent of the melting and refining department; the 8 old furnaces have been removed and replaced by 12 improved furnaces, which have been shown, by tests, to be more efficient.

The interior arrangement of a large part of the second floor has been changed to accommodate increased refinery equipment; an additional furnace has been installed in the refinery melting room, giving a total of 5; the silver cells have been increased from 10 to 16 and the gold cells from 18 to 22; a large generator with switchboard, cables, etc., was received from the Philadelphia Mint and has been installed in the refinery to help carry the load necessary to operate the gold and silver cells. Three new tanks have been installed for the purpose of precipitating metallic silver from the nitrate solutions with metallic copper, this method superseding the one formerly in use of precipitating all silver-nitrate solutions to chloride with salt and then by addition of iron and hydrochloric acid reducing the chloride to metallic silver.

The Denver Mint received from the Philadelphia Mint, for the coining department, two rolls and two milling machines; these have been installed and will be ready for use in the coining operations of the next fiscal year.

There has also been installed in the Denver Mint a complete burglar-alarm system, connecting every part of the building with the superintendent's office and the guards.

NEW YORK ASSAY OFFICE IMPROVEMENTS.

An innovation which promises most satisfactory results is the use of a nichrome muffle in the cupel furnaces of the assay department. In evenness of temperature and freedom from cracks it is proving much superior to the best of clay muffles, and it is anticipated that the life of this muffle will be not less than a year, making it a valuable improvement. Nichrome plates holding 16 cupels are also used, permitting the whole number to be inserted and removed from the furnace at one time.

¹ Includes transportation of bullion and coin between mints and assay office.

COINAGE DURING THE FISCAL YEAR.

The coinage executed at the Philadelphia Mint during the fiscal year 1918 was the largest in the history of any mint in the United States, in fact, the largest known output for an equal period of any mint in the world; it includes nearly 465 million pieces of domestic coin and over 20 million pieces of foreign coin and coinage blanks, totaling 485 million pieces.

At the Denver Mint the number of pieces coined—128½ millions—practically trebled that of any previous year; while at the San Francisco Mint the number of pieces executed—153 millions—was over twice that of the preceding year, which, in turn, was more than twice the number struck in any prior year of the mint's history. Details are given in the following tables:

DOMESTIC COINAGE OF THE UNITED STATES MINTS DURING THE FISCAL YEAR 1918.

DESCRIPTION OF THE DESIGN OF THE ILLINOIS CENTENNIAL HALF DOLLAR.

The striking of 100,000 pieces of silver half dollars to commemorate the one hundredth anniversary of the admission of the State of Illinois into the Union as a State was authorized by act of Congress approved June 1, 1918.

The obverse bears the low relief portrait of President Lincoln. This is taken from the heroic statue which was unveiled at Springfield, Ill., in August, 1918. This statue, a fine example of American art, is by Sculptor Andrew O'Connor.

The inscriptions "Liberty" and "In God We Trust," together with the year of the coinage, are in accordance with the law regulating the devices and emblems to be on all coins of the United States.

The reverse is an adaptation of the seal of the State of Illinois, with the motto "State Sovereignty National Union." The inscription "United States of America," the value of the coin, and the national motto "E Pluribus Unum" are placed on this side of the coins as required by the coinage laws.

The act referred to is printed elsewhere in this report.

DEPOSITS OF FOREIGN GOLD BULLION AND COIN.

Foreign gold bullion containing 7,421,000 fine ounces, of the value of \$153,405,687, and foreign gold coin containing 1,955,421 fine ounces, of the value of \$40,422,147, was deposited and received from the following countries during the fiscal year ending June 30, 1918:

Country.	Crude bullion.		Refined bullion.		Coin.

OPERATIONS OF THE MELTING AND REFINING AND OF THE COINING DEPARTMENTS, FISCAL YEAR 1918.

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints, and assay office at New York, during the fiscal year ended June 30, 1918, was 9,458,285.093 fine ounces of gold and 94,345,183.60 fine ounces of silver. There were also operated upon at the coinage mints 192,209,263.89 ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative officers, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015. Coiner—Gold, 0.0005; silver, 0.001.

GOLD BULLION.

ENGRAVING DEPARTMENT.

The engraving department of the Philadelphia Mint manufactured 11,029 dies during the fiscal year 1918, an increase of 2,929 as compared with 8,100 manufactured last year. The large increase was due to the heavy coinage at each of the mints, for which all dies are here manufactured. This department also manufactured dies for foreign coinage, for medals of a national character, postage-stamp dies, and dies and seals for Government bonds.

EMPLOYEES.

The total number of persons employed in the institutions of the Mint Service on June 30, 1918, was 961.

The number of employees in each of the various departments of the large institutions is given below:

NUMBER OF EMPLOYEES, BY DEPARTMENTS.

Institution.	General.	Engraving.	Assaying.	Coining.	Melting and refining.	Total.
Philadelphia Mint.....	176	17	10	230	66	499
San Francisco Mint.....	67		12	45	54	178
Denver Mint.....	39		9	20	24	92
New York Assay Office.....	83		18		42	143
Total.....	365	17	49	295	186	912

A number of employees have joined the colors, among them being 2 from the Director's office, 17 from the Philadelphia Mint, 16 from the San Francisco Mint, 6 from the New York Assay Office, and several from the Denver Mint.

VISITORS.

No visitors have been admitted to the Mint Service institutions since the declaration of war; prior thereto, thousands were received each year.

LABORATORY OF THE BUREAU OF THE MINT.

From the domestic coinage of the calendar year 1917 the assayer of this bureau tested 2 gold and 1,180 silver coins, all of which except 2, were found within the legal requirements as to weight and fineness.

The greatest deviation in fineness of silver coins above standard (the limit being 3 above or below) was 2.8, while the greatest deviation below was 2.0.

The following table summarizes the silver coins:

Fineness.	Number of silver coins.			
	Philadel- phia.	San Fran- cisco.	Denver.	Total.
898.0.....		1		1
.5.....	3		1	4
.7.....	4			4

Average.....	899.994	900.252	899.819	900.046

Thirty-eight Philippine coins were examined, all of which were within the legal requirements.

The receipt of certificate bar samples was very large during the year, and besides the regular assays made here many samples were sent to various service laboratories for test assaying, some being returned to the offices of origin without information as to what the samples were; many others were tested in several laboratories and some were assayed more than once in the same laboratory. This work had not been completed at the end of the year.

PROCEEDINGS OF THE ASSAY COMMISSION, 1918.

The following-named gentlemen were designated by the President as commissioners to examine and test the weight and fineness of the coins reserved at the several mints during the calendar year 1917, pursuant to the provisions of section 3547 of the Revised Statutes of the United States: Hon. William A. Ashbrook, M. C.; Mr. Will H. Rounds, Sioux Falls, S. Dak.; Mr. John L. McNeil, Durango, Colo.; Mr. W. P. Morris, Salem, Ill.; Mr. Samuel Newhouse, Salt Lake City, Utah; Mr. Calvin Page, Portsmouth, N. H.; Mr. L. V. Bassett, Rocky Mount, N. C.; Mr. A. C. Weiss, Duluth, Minn.; Mr. J. H. O'Neil, Boston, Mass.; Mr. L. W. Nieman, Milwaukee, Wis.; Mr. Martin H. Glynn, Albany, N. Y.; Mr. Roy W. Keehn, Chicago, Ill.; Mr. S. B. Amidon, Wichita, Kans.; Mr. Robert P. Oldham, Seattle, Wash.; Mr. Kenneth M. Simpson, San Francisco, Cal.; Dr. George F. Kunz, New York, N. Y.; Dr. Marcus Benjamin, Washington, D. C.; Mr. Louis A. Fischer, Washington, D. C.; Dr. W. F. Hillebrand, Bureau of Standards.

The commission met at the mint at Philadelphia, Wednesday, the 13th day of February, 1918, and Hon. William A. Ashbrook was elected chairman.

The following committees were appointed by the chairman, with the approval of the commission:

Committee on counting.—Mr. S. B. Amidon, chairman; Messrs. Weiss, O'Neil, Bassett.

Committee on weighing.—Maj. Louis A. Fischer, chairman; Messrs. Benjamin, Keehn, Rounds.

Committee on assaying.—Mr. Kenneth M. Simpson, chairman; Messrs. Hillebrand, Kunz, and Comings.

On the nomination of Mr. Amidon, Congressman Ashbrook was elected chairman of the committee on resolutions, who appointed Messrs. Weiss, Benjamin, O'Neil, and Kunz as members of this committee.

COMMITTEE ON COUNTING.

The committee on counting reported that the packages containing the pieces of coins reserved by the several mints for trial, in accordance with section 3539 of the Revised Statutes of the United States, were received from the superintendent of the mint at Philadelphia, compared with the transcripts kept by the Director of the Mint, and were found to be correct to as date, number of delivery, number of pieces and denomination, except in package dated December 1, 1917, from the mint at San Francisco, supposed to contain 115 dimes from delivery No. 228, of the coinage of \$23,000, the said package containing in addition thereto one small envelope inclosing ten 10-centavo Philippine coins, which seem to be a surplusage. This verification having been completed, packages were selected at random, several from each month's delivery of each denomination coined by each mint, and, with the exception above stated, all were found to be correct. These coins were then delivered to the committees on weighing and assaying for further examination and test.

The following table gives the packages verified by the committee, being the total number of coins reserved by the several mints:

Denominations.	Philadelphia.		San Francisco.		Denver.		Total.	
	Pieces.	Value.	Pieces.	Value.	Pieces.	Value.	Pieces.	Value.
Gold:

10 centavos.....			2,997	29,970.00			2,997	29,970.00
Total Philippine.....			4,913	38,533.00			4,913	38,533.00

COMMITTEE ON WEIGHING.

The committee on weighing reported that they have examined certain coins selected at random from those reserved for the annual trial by the Assay Commission. The weighings, as usual, were made on the Troemner balance provided for the purpose by the mint. It was carefully examined as to the equality of the arms and as to its sensibility, both of which were found to be satisfactory. The weights employed for testing the United States coins were a set of coin weights furnished by the Director of the Bureau of Standards, with a certificate giving the variation in mass from the standards fixed by law.

The weights used for testing the Philippine coins were a set of grain weights belonging to the Philadelphia Mint, which were checked by the committee by comparison with the coin weights referred to above. All weighings of coins were made to the nearest one-hundredth grain.

Time did not permit of a complete intercomparison of the standard weights, but enough check weighings were made to show that the weights had substantially the same values that they had last year.

On account of the unusually large coinage the number of weighings of coins made by the committee was largely in excess of the number made last year, being, approximately, six times the number.

Out of 332 coins weighed, all of them, with the exception of one half dollar coined at the Philadelphia Mint on February 9, were found to be within the tolerance established in section 3536 of the Revised Statutes.

COMMITTEE ON ASSAYING.

The committee on assaying reported that from the coins reserved from the United States mints at Philadelphia, San Francisco, and Denver, samples for assay have been taken representing all denominations coined at each mint during each month of the year.

The results of assays made of the individual coins and of samples from larger numbers massed and melted are given in the following schedules. From these it will be seen that—

At Philadelphia, the assays made of the McKinley gold dollars (the only gold coined during the year) showed a fineness of 900.

The highest assays upon the silver coinage of the different mints (the limit of tolerance being three one-thousandths) are at Philadelphia, 900.7; San Francisco, 901.3; Denver, 900.9.

The lowest assays upon the silver coinage of the different mints (the limit of tolerance being three one-thousandths) are at Philadelphia, 898.5; San Francisco, 899.1; Denver, 898.6.

The highest and lowest assays upon the Philippine silver coinage at San Francisco are 750.7 and 749.2.

The committee has tested the quartation silver and found it to be free from gold. The acid used in the humid assay of silver was tested and found to contain only a trace of chlorine. The lead foil contained only a trace of silver.

The balances used were also tested and found to be correct, and the committee deem the assays exhibited to be entirely correct.

ASSAYS OF SILVER COINS MELTED IN MASS.

The following report submitted by the committee on resolutions was unanimously adopted:

Whereas the Annual Assay Commission appointed by the President of the United States to examine and test the weight and fineness of the gold and silver coins reserved by the mints of the United States has held its meeting in the city of Philadelphia on February 13 and 14, 1918; and

Whereas the commission has about completed its labors, the committee on resolutions desires to offer the following resolutions:

First. That the commission renews the recommendations of prior commissions, not perfunctorily, but very urgently, with reference to the maintenance and increase of the national coin collection of the mint at Philadelphia.

Second. This commission desires to reiterate the recommendations of former commissions relative to the souvenir mint medal and believes that it might well be made a profitable and helpful adjunct to the mint exhibit of coins and medals. We also urgently urge the importance and necessity of an increased appropriation for the purchase of rare coins and medals and believe that the honorable Secretary of the Treasury might properly make such recommendation to the Congress for increased appropriation and the necessary legislation.

Third. That this commission, sharing the opinion of former commissions, as to the importance of the adoption of the metric system of weights and measures, do again respectfully recommend to the Director of the Mint that he give this question the benefit of his good consideration.

Fourth. The commission is pleased to note the greatly increased production of the several mints during the year 1917 and feel that all of the officials and employees, from the highest to the humblest, are entitled to favorable mention and great praise, who by their deep devotion to their several tasks have made it possible to meet the abnormal demands of the war period and have therefore patriotically done more than their bit.

Resolved, That the thanks of the commission are due the splendid Director of the Mint, Hon. R. T. Baker; the able superintendent of the mint, Hon. A. M. Joyce; our indispensable secretary, Mrs. Virginia H. Carpenter, and the other officials and employees of the mint for the courtesy and consideration shown this commission. We find naught to fault and much to commend.

Respectfully submitted.

WILLIAM A. ASHBROOK, *Chairman.*
A. C. WEISS.
JOSEPH H. O'NEIL.
GEORGE F. KUNZ.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1918, is respectfully submitted.

Hon. WILLIAM G. MCADOO,
Secretary of the Treasury.

RAY. T. BAKER,
Director of the Mint.

PART II

REPORT OF THE DIRECTOR OF THE MINT ON
THE PRODUCTION AND CONSUMPTION OF GOLD
AND SILVER IN THE UNITED STATES DURING
THE CALENDAR YEAR 1917

REPORT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1917.

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint and the Geological Survey working in conjunction, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the figures of the mine production made by the survey. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1917 is estimated to have been \$83,750,700, and the production of silver is estimated at 71,740,362 fine ounces. A comparison of these figures with those for 1916 indicates decrease of production of both gold and silver, the former by approximately 8.8 million dollars and the latter by approximately 2.7 million ounces.

Alaska and all the States, except Arizona, which produce largely of gold, show reductions for 1917. Arizona's production increased about 1 million dollars. The greatest reduction was over 3 million dollars in Colorado, Nevada coming next with 2 million, Alaska with 1½ million, and California with about 1 million.

As regards silver, the only States showing material differences over last year's production were Nevada, where the reduction was about 2½ million ounces, this approximating the same difference as for the entire United States, and Montana, the output of which was ½ million ounces more than last year.

A brief review of mining conditions in each State follows, for which acknowledgment is made to the Geological Survey:

ALASKA.

The production of gold in Alaska in 1917 declined about \$2,500,000 and was the smallest since 1904. The reduction in output of gold was due chiefly to curtailment of operations because of the scarcity of labor and the high cost of materials, but in part also to the disaster from cave-in at the Treadwell mine in April and to the depletion of some of the richer placers. There was a reduction in the output of silver, which was due to the decrease in production of gold and copper. The value of silver produced in Alaska in 1917 was, however, the greatest in the history of mining in that Territory.

The value of the gold produced in Alaska in 1917 is estimated at \$14,657,353, and the output of silver was 1,239,150 ounces, valued at \$1,021,060.

In 1917 about 31 per cent of the total gold production came from lode mines, compared with 38 per cent credited to lode mines in 1916. In 1915 it was 37 per cent of the total.

The auriferous lode mines produced during the year gold and silver valued at \$4,691,529, compared with an output valued at \$5,985,149 in 1916. These mines produced 133,587 fine ounces of silver in 1917 and 110,050 ounces in 1916.

Thirty-one gold lode mines, including properties which made only small outputs, were operated the whole or a part of 1917. A number of gold prospects, some of which produced a little gold, were also worked. Of the producing mines, 10 were in southeastern Alaska, 3 on Prince William Sound, 4 in Kenai Peninsula, 5 in the Willow Creek district, and 9 in the Fairbanks district. It is estimated that these mines had an output of 3,414,700 tons of ore, compared with 3,448,798 tons in 1916. In 1917 the average value of the gold and silver contents for all the ores mined was \$1.37; the average for 1916 was \$1.70.

There were 115,341 fine ounces of gold and 29,296 fine ounces of silver recovered by amalgamation, and 47,815 fine ounces of gold and 4,640 fine ounces of silver recovered by cyanidation in 1917. The copper ores contained \$265,900 in gold and 1,041,153 ounces of silver valued at \$857,910. The average recovery of gold and silver from copper ores was \$1.70.

The value of the placer gold product in Alaska in 1917 was about \$9,810,000; in 1916 it was \$11,140,000. The decrease was due chiefly to restriction of operations by the high cost of supplies and the scarcity of labor. These adverse conditions were felt in all parts of Alaska and everywhere tended to reduce the output of gold. Production was increased only where local conditions permitted an expansion of the industry notwithstanding increased costs. Such conditions prevailed in some of the newly discovered camps, and consequently there was an increase in the output of placer gold in the Tolovana, Marshall, Tolstoi, and Koyuk or Dime Creek districts. The production of the Ruby district increased slightly, owing to the very successful operation of the Greenstone dredge. There was also an apparent increase in the output of the Kuskokwim region, but this may be due to underestimates of the production in 1916. It is estimated that about 810 placer mines were operated in 1917, but many for only a part of the season; the number was 865 in 1916.

Thirty-six gold dredges were operated in Alaska in 1917, 2 more than in 1916. Twenty-eight dredges were in Seward Peninsula, 3 in the Iditarod, and 1 each in the Ruby, Fairbanks, Circle, Fortymile, and Yentna districts. These dredges handled about 3,700,000 cubic yards of gravel, and produced gold valued at about \$2,500,000. In 1916 the 34 dredges handled about 3,900,000 cubic yards of gravel, and produced gold worth \$2,679,000. The average gold recovery per cubic yard was about 67½ cents in 1917 and 69 cents in 1916. Up to the end of 1917 gold to the value of \$17,610,000 had been mined by dredges.

ARIZONA.

The value of the mine output of gold, silver, copper, lead, and zinc in Arizona in 1917 was \$209,393,802, an increase of \$18,587,632, or nearly 10 per cent. There was a good increase in the gold output, and a considerable increase in the production of zinc, but the silver, copper, and lead product was less than in the previous year.

The gold production had a value of \$5,068,193, an increase of \$1,082,634 from that of 1916. Of this amount, \$17,214 represented the value of the placer gold. Mohave County, with \$2,463,178, was first as a gold producer. Cochise County took second place, with \$1,149,782, closely followed by Yavapai County. The largest part of the gold, or \$2,493,778, had its source in bullion from ore amalgamated or cyanided. Crude ore shipped directly to smelters contained \$2,003,570, and concentrates \$542,446. The gold from deep mines was derived from the following sources: Siliceous ore, \$2,728,632; copper ore, \$2,036,816; lead ore, \$118,636; zinc ore, \$84,307; copper-lead ore, \$1,132; lead-zinc ore, \$48,638; and copper-zinc ore, \$32,818. There was a decided decrease in gold from copper ores, due to labor strikes, but a marked increase in gold from siliceous ores, resulting from the production from the Oatman Camp, and especially the United Eastern mine. About 94 per cent of the State's gold came from copper ore and siliceous ore combined. Placers are unimportant. With each million pounds of copper the gold output is increased approximately \$3,000. Arizona has already reached an astonishingly high mark in copper production, so that a large increase can hardly be expected, and some of the copper ores contain very little gold. Since, however, the mines of Oatman have contributed so much to the increase in the total gold, it would seem reasonable to give some form of encouragement to the mining of gold ores.

The silver output amounted to 6,983,913 ounces, a decrease of 228,126 ounces, or more than 3 per cent, due to strikes in copper camps. Of this total, Cochise County alone produced 2,707,220 ounces, and Yavapai County followed with 2,207,583 ounces. There was a decrease of over 1,000,000 ounces in Cochise County and an increase of 472,281 ounces in Yavapai County. The greater part of the silver, or 5,312,292 ounces, came from crude ore shipped to smelters; concentrates contained 1,271,890 ounces, and the gold and silver bullion 254,353 ounces. The sources of the silver output were as follows: Siliceous ore, 848,500 ounces; copper ore, 5,214,411 ounces; lead ore, 553,544 ounces; zinc ore, 116,179 ounces; copper-lead ore, 33,647 ounces; lead-zinc ore, 190,033 ounces; and copper-zinc ore, 27,372 ounces.

There were 484 mines producing during the year, of which number only 32 were placer mines. The ore output was 15,770,193 tons, a decrease of 1,263,617 tons. A great part of this decrease was due to the low-grade copper properties in Gila, Greenlee, and Pinal Counties. Of the total ore, 10,943,997 tons were concentrated to make 783,832 tons of concentrates, 3,782,494 tons were shipped directly to smelters, 243,769 tons were treated in gold and silver mills, the remainder being made up by slag, old tailings, and ore leached. There were increases in lead ore and zinc ore, but other ores and especially copper ores, decreased.

Arizona is the largest copper-producing State, and the output in 1917 was 712,166,891 pounds, or a decrease of 1.3 per cent; lead output was 23,465,445 pounds, a decrease of more than 13 per cent; and recoverable zinc output was 20,894,860 pounds, an increase of 6 per cent. The value of the copper and lead was greater on account of the increase in the metal prices.

CALIFORNIA.

The yield of gold in California in the year 1917 showed a material decrease as compared with that of 1916, according to Charles G. Yale, of the United States Geological Survey, who annually compiles the figures in that State. This was mainly, if not entirely, due to war conditions. There has been a serious shortage of skilled labor, especially in the deep or quartz mines, large numbers of men having been drawn into the Army and Navy, and many others into industrial occupations where higher wages are paid than in gold mining. The cost of all mining supplies has advanced materially, and it has been difficult to get railroad transportation even for very essential material. The action of the War Department in enforcing the construction of expensive concrete dams for the impounding of tailings from quartz and gravel mines has also had a deterrent effect on both old and new properties. These and other features connected with war conditions have led to a curtailment of operations in larger mines and an entire stoppage of production and development in smaller ones, both quartz and placer.

The total mine production of gold in California in 1917 was \$20,087,504, or \$1,323,237 less than in 1916. Of this total \$11,013,474 was derived from the deep mines. Of the deep-mine gold 93 per cent came from siliceous ore, 6 per cent from copper ores, and the remainder from silver-lead, lead, and zinc ores. There was, owing to the "dry season," a great scarcity of water, which shortened the season during which gravel could be washed and which also compelled a reduction in the number of stamps used in the quartz mills. The producing deep mines of California in 1917 may be classified by chief metallic products as follows: Gold, 145; copper, 48; silver, 3; silver-lead, 24; lead, 19; zinc, 2; total, 241. There were 56 less in 1917 than in 1916. Of the total gold the deep mines produced 55 per cent, as compared with 60 per cent in 1916. The production of gold from deep mines in 1917 decreased more than 14 per cent, while that of placer mines increased by nearly 6 per cent. The total output of ores from the deep mines was 3,003,250 tons or 184,392 tons less than in 1916. The average value per ton in gold and silver was \$4.146, exclusive of the value of the copper, lead, or other metals. Mines in the Mother Lode counties of the State treated 156,885 tons of ore less in 1917 than in 1916. In these counties the total tonnage treated was 1,236,903 tons, yielding in gold and silver \$5,130,682, or an average of \$4.15 per ton as compared with \$4.20 per ton in 1916.

Of the total ore milled in the State 41.18 per cent came from the Mother Lode counties in 1917. Amador, the largest producer of the Mother Lode counties, produced 44 per cent of the total quantity of ore milled in the State, and 65 per cent of the ore milled in the Mother Lode counties. While the deep-mine output materially decreased, that from the placers increased by \$498,373, due entirely to larger returns from the gold-dredging operations. The dredges yielded 91 per cent of the placer gold output, or 41 per cent of the total gold yield of the State. There were 490 mines reporting production in 1917, of which 241 were deep and 249 placers. There were 43 fewer producing placers and 56 fewer deep mines. The placers were made up of 71 hydraulic, 55 dredges (number of machines), 58 drift, and 70 surface or sluicing mines. The production of gold from placer mines in 1917 was \$9,074,030, which is \$498,373 more than in 1916, or 5.81

per cent increase. Of this total placer gold the hydraulic mines produced \$267,103, the dredges \$8,313,527, the drift mines \$366,759, and the surface placers \$126,641. The more important factor of the placer mining industry, gold dredging, showed an increase of gold output of \$544,300 more than that of 1916, so that notwithstanding predictions to the contrary, and the exhaustion of much of the dredging ground, this industry shows no present evidence of decrease.

It is true that the Oroville field, which is the oldest of the larger ones, is much less productive than formerly, owing to much of the ground having been worked out and to the decreased number of dredges in operation. But the increase in the output of the Marysville field and smaller fields in other parts of the State more than make up for the deficiency at Oroville. Since gold dredging began in California in 1898, the total output of gold from that source to the end of 1917 has been \$95,186,985. Since 1898 the Oroville (Butte County) dredging field has yielded \$30,160,486, not including \$2,148,444 mined in the last eight years from adjacent dredging districts in the same county. The Marysville (Yuba County) field has produced from 1903 to 1917, inclusive, \$28,119,067 in gold; the Folsom (Sacramento County) field has yielded since 1902, from dredging, gold valued at \$21,835,675. The output of gold from isolated dredges in various districts in seven other counties of the State is not included in the figures of the three main fields named. The dredges produced 91.6 per cent of the placer gold of California in 1917 and 41 per cent of the total gold. The hydraulic mines only produced 3 per cent, the drift mines 4 per cent, and the surface or sluicing mines 1.4 per cent. Of the 26 counties producing gold in California in 1917, there were 3 which yielded no placer gold, and 4 yielded no gold from deep mines. Five counties produced more than \$1,000,000 each in 1917, as follows: Nevada, \$3,682,947; Yuba, \$3,677,673; Amador, \$3,664,164; Sacramento, \$1,919,581; and Calaveras, \$1,471,442. The leading hydraulic mining county was Siskiyou; the greatest producer of gold from drift mines was Placer; the largest producer of gold from dredges was Yuba; and the largest producer from surface or sluicing mines was El Dorado. The most productive deep or quartz mine county in the State was Nevada. The largest increase—\$509,950—in gold in 1917, as compared with 1916, was in Yuba County, followed in order by Trinity, Calaveras, Placer, Sacramento, Nevada, Madera, and Fresno Counties.

The total yield of silver in California in 1917 was 1,775,431 fine ounces, valued at \$1,462,955, which is a decrease of 30 per cent in quantity and 13 per cent in value as compared with 1916. Of the total quantity, 1,748,148 ounces, valued at \$1,440,495, were derived from deep mines of all kinds, and the remainder from placers. The largest part of the output—1,524,109 ounces, valued at \$1,255,865—was derived from crude smelting ores. Siliceous ores yielded 139,492 ounces. Inyo is now the leading county in California in the production of silver, having displaced Shasta County as first in rank. This is due to the increased productivity in silver, silver-lead, and lead mines. Silver from purely silver ores equaled only about 8,300 ounces, but silver-lead ores yielded 552,641 ounces and lead ores yielded 165,155 ounces. Silver derived from copper ores amounted to 882,480 ounces, which is more than a million ounces less than in 1916.

COLORADO.

Colorado mines during 1917 produced \$15,849,302 in gold and 7,304,353 ounces of silver, compared with \$19,153,821 in gold and 7,656,544 ounces silver in 1916. This shows a decrease of \$3,304,519 in gold and a decrease of 352,191 ounces in silver.

The lead smelters in the State, at Globe, Leadville, Pueblo, Durango, and Salida, were operated about as in 1916, the ore coming from Arizona, Canada, Colorado, Idaho, South Dakota, and other States, and including a large quantity of zinc residues from Kansas and Oklahoma smelters. The copper matting plants at Ouray and Vulcan were idle. The United States Zinc Co.'s magnetic wet-concentration mill and zinc smelter at Pueblo were actively operated on zinc ores from Colorado and other Western States. The Western Chemical Co.'s acid plant and magnetic-separation wet-concentration mill at Denver and the Empire Zinc Co.'s 200-ton magnetic-separation plant at Canon City were operated steadily, both treating chiefly Leadville lead-zinc sulphide ores. The River Smelting & Refining Co.'s plant at Florence continued to treat zinc-lead-copper sulphide ores from several counties in Colorado, part of the product being forwarded to this company's electrolytic zinc plant at Keokuk, Iowa. The Western zinc-oxide plant at Leadville was operated steadily on zinc carbonate ores. Copper ore and cyanide precipitates were shipped from Colorado to the smelter at Omaha, Nebr., and some copper and lead ores were shipped to plants in Utah.

Cripple Creek produced \$10,394,847 in 1917 as compared with \$12,119,550 in 1916, a decrease of \$1,724,703. During the year the Roosevelt tunnel was continued so that it will end at the Portland mine, not at the Golden Cycle-Vindicator mine, as originally intended. A crosscut was also started toward the Crescent mine. The Portland Co. abandoned its plan of using the flotation process in its Independence mill at Victor and continued to use the cyanide process with considerably increased capacity. The Vindicator Co. continued its experiment with the flotation process and washing apparatus.

The Golden Cycle cyanidation mill at Colorado City and the Portland cyanidation mill at Colorado Springs were operated steadily as was the Portland cyanidation mill at Victor. The yield from the small cyanide plants in the Cripple Creek district was not so large as usual and the shipments of smelting ore directly to smelters fell off considerably.

Lake County, chiefly Leadville, but including also the Lakawanna Gulch, Sugar Loaf, St. Kevin, and the Wortman lode districts and the Arkansas River dredge district, produced slightly over \$1,000,000 in gold, slightly more than 2,000,000 ounces of silver, 20,000,000 pounds of lead, 2,000,000 pounds of copper, and 60,500,000 pounds of zinc a decrease for all metals, as compared with the output for the year 1916, which was the largest in the history of that district. Shipments of manganese iron ore, manganese silver fluxing ore, lead carbonate, and zinc carbonate ores continued in increasing quantities from the Down Town district, unwatered in 1916. Some zinc carbonate and zinc sulphide ores were shipped from the Fryer Hill district, also unwatered in 1916, and considerable iron-sulphide ores were shipped from the unwatered Carbonate Hill district. The output of zinc carbonate from the Leadville district decreased heavily.

The Derry Ranch dredge, below Malta, continued operations during the year. The San Juan region of Dolores, La Plata, Ouray, San Juan, and San Miguel Counties produced approximately \$2,500,000 in gold, 2,500,000 ounces of silver, 20,000,000 pounds of lead, 3,700,000 pounds of copper, and 6,700,000 pounds of zinc, which is an increase for silver, lead, and zinc, but a material decrease for gold. San Miguel County mills maintained their production of gold, which was about \$2,000,000, and increased their production of silver to over 1,000,000 ounces, but considerable quantities of the ore treated in these mills came from operations in Ouray County along the strike of the veins. San Juan County produced considerably less gold but made an appreciable increase in the output of silver and a large increase in the output of lead, copper, and zinc. The yield of zinc in Dolores County increased heavily, but the yield of the other metals fell off somewhat. In Ouray County there was naturally a heavy decrease in the output of gold, due to the idleness of the Camp Bird mill, both the mine and mill having been closed down in August, 1916, to await the completion of the low level adit, which was driven steadily during 1917. This adit is to be 10,700 feet long and will cut the Camp Bird 450 feet below the present deepest workings and 800 feet below workings of the next most important section. Boulder, Gilpin, and Clear Creek Counties produced less gold but a slightly increased yield of silver, copper, lead, and zinc. The gold decrease was divided between the three counties. Clear Creek County increased its output of silver, lead, copper, and zinc.

In Chaffee County the output of gold, lead, copper, and zinc fell off, but the output of silver increased. The output of Pitkin County (Aspen) was 659,000 ounces of silver and 14,200,000 pounds of lead. The output of zinc from this county, however, increased considerably.

The production of Creede (Mineral County) fell off considerably, and the gold production of Gunnison County fell off materially, but the yield of the other metals in that county increased.

The four gold dredges at Breckenridge and the hydraulic and placer mines of that district in 1917 produced \$540,540 in gold as compared with \$579,050 in 1916. The production of gold from deep mines also decreased but the yield of zinc from the Breckenridge district showed a very considerable increase.

Mining was very active at Red Cliff, Eagle County, and some shipments were also made from the Brush Creek district. The output from both lode and placer mines in Park County decreased. The output from the mines in Custer County was the largest for several years, and there was also a considerably increased production from the Kerber Creek district of Saguache County.

The number of mines producing metals in 1917 was 748, of which 33 were placers, as against 852 mines, of which 27 were placer in 1916.

CENTRAL STATES.

Only three of the Central States—Michigan, Missouri, and Illinois—produced any silver in 1917. The total production in 1917 was 757,323 fine ounces, valued at \$624,034, against an output of 852,380 ounces, valued at \$560,866 in 1916.

All of the silver produced in the Central States in 1917 was recovered incidentally to the production of copper and lead.

Of the 1917 production 688,551 ounces came from the copper lodes of Michigan, a decrease of 28,089 ounces. A few ounces of silver were recovered from copper ore mined in Missouri, but nearly all the output of 61,586 ounces was derived from 76,222 tons of lead concentrates which were desilverized.

From the lead concentrates derived from the southern Illinois fluorspar ores, 7,186 ounces of silver were recovered. This was 1,502 ounces more than the recovery in 1916.

No silver ore was shipped from Oklahoma in 1917.

EASTERN OR APPALACHIAN STATES.

The total production of gold of Alabama, Georgia, Maryland, North Carolina, South Carolina, Tennessee, Vermont, and Virginia in 1917 was \$29,227, a decrease of \$35,143 from the production in 1916. There was a small increase in the quantity of gold from mines in Maryland, South Carolina, and Virginia, but large decreases from mines in Alabama, Georgia, and North Carolina. The largest gold production made in 1917 in the Eastern States was 285.55 ounces from mines in North Carolina. The by-product gold from Tennessee copper ores was the next largest, being 257.65 ounces in 1917. In the Eastern States in 1917 the production of gold from placer mines was 416.17 ounces; from siliceous gold-silver ores, 336.41 ounces; and from copper ores, 661.28 ounces.

The silver produced in the Appalachian States in 1917 was 106,450 ounces, an increase of 6,127 ounces over the 1916 output. The increase in silver output was due to the greater production from copper ores mined in Tennessee (from which 99,053 ounces of silver were recovered in 1917) and in Virginia, and to the recovery of some silver from lead ore. In 1917 only 43 ounces of silver were produced from placer mines and 148 ounces from siliceous gold-silver ores.

Value of estimated production of gold in the southern Appalachian States, 1799-1917, by States.

Alabama.....	\$765, 539	Tennessee.....	\$248, 144

IDAHO.

In 1917 the total value of the metal output of Idaho was \$54,-845,153, or an increase of \$6,077,370 over that of 1916. Of this total, the gold was valued at \$804,809; silver, \$9,912,175; copper, \$2,136,928; lead, \$33,846,119; and recoverable zinc, \$8,145,122. There was a fair increase in the output of lead, but the quantity of other metals decreased.

Gold decreased from \$1,115,810 in 1916 to \$804,809 in 1917. Of this total, the placer gold amounted to \$135,231, against \$449,093 in 1916. The gold won by dredges was valued at \$59,447, a decrease from \$327,696 in 1916. Siliceous ore produced more gold than any other kind, or \$515,334. Gold in copper ore was valued at \$81,881; lead ore, \$53,073; and lead zinc ore, \$19,290. Boise County was the largest gold producer, but there was a large decrease because the dredge at Idaho City was idle. Idaho County followed with \$211,924 in gold, due largely to operations at the Holte mine at Burgdorf. Gold in crude ore shipped directly to smelters had a value of \$116,504; gold in concentrates, \$82,889; and gold in ores amalgamated and cyanided, \$469,686. It will be seen that nearly three-fourths of Idaho's gold comes from placers and siliceous ore. A large increase in the output of lead ore or copper ore would not greatly increase the gold output. Most of the deposits of siliceous ore are far from rail transportation, as in Idaho, Elmore, Lemhi, and Owyhee Counties. Some of the ores are difficult to treat, and costs are abnormally high.

The silver output was 12,029,338 fine ounces, a decrease of 271,535 ounces, or more than 2 per cent. In Blaine, Boundary, and Custer

Counties the output increased, but the decrease was large in Shoshone and Lemhi Counties. The value of the output, however, increased by \$1,818,201, because of the better price of the metal. Most of the silver production came from lead ore and lead-zinc ore, the former supplying 8,063,768 ounces and the latter 3,619,535 ounces. Copper ore supplied 232,840 ounces; siliceous ore, 81,514 ounces; zinc ore, 29,684 ounces; and small quantities came from placers and copper-lead ore. Concentrates of various kinds supplied 8,044,469 ounces of silver; crude ore shipped to smelters, 3,926,092 ounces; and bullion from gold and silver mills, 20,877 ounces. The Coeur d'Alene region of Shoshone County produced 11,241,126 ounces of silver, valued at \$9,262,688.

There were 359 mines producing during the year, of which 112 were placer mines and 247 deep mines. The total ore mined and treated was 2,758,507 tons, an increase of 40,462 tons over the total of 1916. Of this tonnage, 2,375,891 tons were concentrated, 284,567 tons were shipped directly to smelters, and 67,677 tons were treated in gold and silver mills; the remainder being slag and old tailings. The mines of Idaho also produced 7,827,574 pounds of copper, 393,559,521 pounds of lead, and 79,854,136 pounds of recoverable zinc.

MONTANA.

The mine output of gold, silver, copper, lead, and zinc in Montana in 1917 had a total value of \$110,149,382, a decrease of \$23,733,565 from that of 1916. There was a good increase in the lead output, but decided decreases in gold, silver, copper, and zinc, due principally to labor troubles at Butte.

The total gold output was valued at \$3,517,253, of which \$3,050,190 came from deep mines and \$467,063 came from placers. Most of the placer gold, or \$409,455, came from dredge operations, which decreased from \$642,572 in 1916. As in former years, the gold was derived principally from siliceous ores, which supplied \$2,215,459. Copper ore was next in importance with \$569,748; lead-zinc ore supplied \$131,746; zinc ore, \$30,496; lead ore, \$96,923; copper-lead ore, \$4,619; and copper-lead-zinc ore, \$1,199. The gold from crude ore shipped to smelters contained \$984,625; concentrates, \$675,460; and bullion from amalgamation and cyanide mills, \$1,383,097. About 92 per cent of the State gold output came from siliceous ore, copper ore, and placers combined. In 1917 there was a decided decrease from all of these sources. Gold from copper ores will probably improve if the operation of the mines at Butte is not interrupted by strikes. In 1917 new ore bodies were opened and increased gold production came from Marysville, in Lewis and Clark County.

The silver output decreased from 16,494,366 ounces in 1916 to 13,128,142 ounces in 1917, a decrease of 3,366,224 ounces. The value of the output was \$10,817,589, which is close to the value of 1916 on account of the better price. Silver Bow County, or the Butte region, produced 11,511,600 ounces, and Granite County was next with 445,806 ounces. There were 10,053,994 ounces derived from concentrates, 2,580,608 ounces from crude ore, and 235,068 ounces from bullion produced at gold and silver mills. Separated as to kinds of ore, copper ore supplied 8,911,389 ounces; lead-zinc ore, 2,386,824 ounces; siliceous ore, 954,477 ounces; zinc ore, 378,239

ounces; lead ore, 388,435 ounces; copper-lead ore, 95,747 ounces; copper-lead-zinc ore, 9,480 ounces; and placers, 3,551 ounces. The decrease was general, except in lead ore.

There were 617 producing mines, of which 518 were deep mines and 99 were placer properties. The total output of ore was 6,307,164 tons, a decrease of 1,553,261 tons from that of 1916. Of this total, 5,086,706 tons were concentrated, 503,023 tons were shipped directly to smelters, and 327,748 tons were treated in gold and silver mills. In addition to gold and silver, the deep mines of the State produced 274,462,574 pounds of copper, 21,951,220 pounds of lead, and 186,259,331 pounds of recoverable zinc.

NEVADA.

The total value of the production of gold, silver, copper, lead, and zinc in Nevada in 1917 was \$54,424,580, an increase of \$4,478,156. There were good increases in copper and lead, but decided decreases in gold, silver, and zinc. The price of silver increased materially, so the value of the output was somewhat increased.

The gold output had a value of \$6,959,468, against \$8,866,237 in 1916. Nye County took the lead in 1917 with \$2,007,234, but it was followed very closely by Esmeralda County with \$1,986,001. White Pine County and Mineral County were also important gold producers, with Storey, Humboldt, and Elko Counties following. A large part of the decrease was in the Goldfield and Tonopah districts. The placer gold output was valued at \$292,584, against \$354,313 in 1916. No dredges were operated in 1917, and most of the placer gold came from the Manhattan district in Nye County and the Battle Mountain district in Lander County. The greater part of the gold, or \$5,127,799 was obtained from ores amalgamated or cyanided. Crude ore shipped to smelters contained \$477,627 and concentrates, \$1,043,217. The siliceous ores contained \$5,553,940; copper ore, \$1,021,598; lead ore, \$81,443; zinc ore, \$170; copper-lead ore, \$5,452; and lead-zinc ore, \$4,281. In Nevada, as in other States, part of the decrease in gold and silver is due to depletion of ore bodies, and part to abnormal costs.

The production of silver in 1917 was 11,269,969 ounces, against 13,837,525 ounces in 1916, a decrease of 2,567,556 ounces. There were decreases in all but three counties. The output of the Tonopah district, in Nye County, continued to decrease decidedly, and there was a marked decrease in Churchill County. Most of the silver, or 10,176,717 ounces, came from siliceous ores, and the source of the remainder was as follows: Copper ore, 327,751 ounces; lead ore, 556,706 ounces; lead-zinc ore, 177,930 ounces; zinc ore, 2,620 ounces; copper-lead ore, 21,967 ounces; placers, 6,278 ounces. Bullion from gold and silver mills, supplied 9,241,543 ounces of silver; concentrates, 713,459 ounces; and crude ore shipped to smelters, 1,238,946 ounces.

There were 943 producers in the State in 1917, of which 91 were placers and 852 deep-mine properties. The production of ore sold or treated increased considerably, from 5,941,165 tons in 1916 to 6,473,519 tons in 1917. Most of the ore, or 4,524,310 tons, was concentrated, making 627,416 tons of concentrates. The ore milled and treated largely by the cyanide process amounted to 1,125,255

tons, and crude ore shipped to smelters was 658,447 tons. The deep mines also produced 122,794,704 pounds of copper, 27,677,928 pounds of lead, and 22,307,868 pounds of recoverable zinc. There was a good increase in the copper output, as the Mason Valley and the Nevada Consolidated plants were both active.

NEW MEXICO.

New Mexico mines during 1917 produced \$1,067,618 in gold and 1,453,454 ounces of silver, compared with \$1,382,480 in gold and 1,766,274 ounces of silver in 1916. This shows a decrease of \$314,862 in gold and a decrease of 312,820 ounces of silver.

Mills of the Mogollon district, Socorro County, yielded \$258,620 in gold and 722,644 ounces of silver, as compared with \$373,068 in gold and 1,008,483 ounces of silver in 1916. Considerable new development work was done in this district in 1917 but the destruction by fire of the Fanney mill on October 26, 1917, seriously curtailed production of the district. The output of gold from the Aztec mine, at Baldy, Colfax County, was not so large as in 1916. The Cossak cyanidation mill, in the Cochiti (Bland) district, Sandoval County, a contributor of considerable gold and silver in 1916, was not operated in 1917. A very small production was made from the gold district at Whiteoaks, Lincoln County, but a new 250-ton amalgamation mill was completed and set in operation during the year at Parsons, Lincoln County. The decrease in the quantity of ore shipped from the Lordsburg district necessarily decreased its production of gold and silver. The closing of the San Pedro smelter, Santa Fe County, also materially decreased the gold output of the State. The Burro Mountain district contributed an increased quantity of gold and silver, and the copper ores produced in the Orogrande district, Otero County, and the copper concentrates of the Chino Copper Company also contained a small quantity of gold.

The principal metal produced in New Mexico is copper, which since 1910 has been obtained chiefly from the Chino Copper Co.'s low-grade copper deposits at Santa Rita. The ore is milled at Hurley in a large wet concentration flotation plant. In 1917 this company made its largest output, 83,339,782 pounds. The Burro Mountain Copper Co.'s concentration mill, which began operations at full capacity June 1, 1916, was operated continuously in 1917 and increased considerably its production. The output from the Lordsburg district was not equal to that of 1916. During the later part of 1917 a flotation plant was being built in this district at the Eighty-Five mine. The Santa Fe Gold Copper Co.'s 125-ton matting plant, at San Pedro, was operated for only three months in 1917. Increased shipments of copper ores were made from the Magdalena district, Socorro County, and a large quantity of low-grade copper ore in a gangue of calcite, was shipped from the Apache mine, Hachita. Orogrande, Otero County, also contributed some copper. Small quantities of copper ore were shipped from the Mora Grant, Mora County, and from the Nacimientos Mountains, Sandoval County. Shipments of copper ore were also made from the Carocito district, near Scholle.

Lead ores were shipped from the Central, San Simon, and Pinos Altos districts, Grant County, and Cooks Peak, Tres Hermanas, and Victorio districts, Luna County. Considerable quantities of lead-carbonate and lead-zinc carbonate ores were shipped from Kelly, Socorro County. During the latter part of the year lead shipments were started from the Organ Mountains district, Dona Ana County. The old lead smelter at Deming was rebuilt in April and was operated on lead ores until the smelter was destroyed by fire in October.

Decreased shipments of zinc-carbonate and zinc-sulphide ores were made in 1917. At Kelly, Socorro County, the principal producing mines were the Kelly, Graphic, and Juanita. The Ozark mill was destroyed by fire in August, 1916, but a new mill was put in operation in the summer of 1917 and made a considerable output for the year. The Kelly magnetic mill was also in operation in 1917. At Hanover, zinc-carbonate ores were shipped from the Hanover mines and others, and zinc-sulphide concentrates were shipped from the Hanover magnetic separation mill. The Cleveland magnetic separation mill, at Pinos Altos, was operated steadily. The mill erected in the revived Steeplerock district, Grant County, was also operated for a short time. Zinc-sulphide concentrates were also shipped from the Rocky Mountain mill, at Los Cerrillos. Zinc-carbonate ores were shipped from the Magdalena, Hanover, Cooks Peak, Florida Mountains, Tres Hermanas, Hachita, and Pinos Altos districts.

OREGON.

There were 32 less producing mines in Oregon in 1917 than there were in 1916, and the number of mines reporting production in 1917 was only 76. The total gold production of the State in 1917 was \$1,491,798, which is 21.5 per cent less than in the previous year; and the silver output was 125,656 fine ounces, a reduction of 50 per cent in quantity. The producing placers which reported decreased in number by 22 in 1917, and the producing deep mines by 10. According to Charles G. Yale, of the United States Geological Survey, the gold and silver mining industry of Oregon has been affected unfavorably for the same reason it has in other Western States of the Union during the past year. Scarcity and high cost of skilled labor and supplies, as well as increased prices for materials used in mining, have combined to discourage new mining ventures and to retard those already in operation. There has been a general curtailment of operations and an entire shutting down of a number of formerly productive mines. This is particularly evident in the case of the smaller properties of the State, which have been unable to make any profit under prevailing conditions. Even the larger deep mines and extensive gold dredging enterprises show a much decreased yield. The older dredging fields of the State show a material reduction in yield, one of the larger dredges in them having worked out its ground entirely and quit work permanently. The other dredge in the Powder River field has worked out its richer ground and in 1917 worked a less productive area. Two new dredges were built in other sections in the last two years and are working profitably. The placer mines of Oregon produced \$727,366 in gold in 1917, which is a decrease of \$145,151 from 1916. The hydraulic mines produced \$106,991 in

1917, or \$57,557 less than in 1916; the drift mines, \$1,350, or \$3,082 less; the dredges and surface placers combined, \$619,025, or \$84,512 less. There were 46 hydraulic mines, 4 dredges, 1 surface, and 2 drift mines reporting production in 1917.

The total output of gold from deep mines in 1917 was \$1,491,798, or \$410,381 less than in 1916. There were only four deep mines in Oregon in 1917 which exceeded an annual output of \$100,000. The largest yield of gold from one county came, as usual, from Baker County, the output in 1917 having been \$1,228,199, or \$412,427 less than in 1916. The next county in rank of gold production was Grant, with \$137,720 to its credit, an increase of \$74,127, entirely due to newly installed dredging operations. All classes of mines, placers and deep ones, showed a diminished yield of gold, with the exception of copper mines, from which a small increase of gold as a by-product was shown.

From ores and placers in Oregon in 1917 there was recovered 125,656 fine ounces of silver, valued at \$103,541, a decrease in quantity of 105,686 ounces and in value of \$48,682. Baker County made the largest output of silver, as it did of gold.

The combined output from the southwestern counties of Oregon, which are Benton, Coos, Curry, Douglas, Jackson, Josephine, and Lane, was \$117,075 in gold and 758 ounces of silver in 1917. The total decrease of gold in these southwestern counties in 1917, as compared with 1916, was \$55,214. Benton County reported no yield of either gold or silver.

The gold-producing northeastern counties of Oregon comprise Baker, Crook, Grant, Harney, Malheur, Umatilla, Union, Wallowa, and Wheeler, but in 1917 neither Harney, Umatilla, Union, nor Wallowa reported any production. The combined gold output of the five producing counties of this region in 1917 was \$1,374,723 (of which Baker County contributed 94 per cent), or \$353,494 less than in 1916. The yield of placer gold in 1917 was \$637,349, or 14 per cent less than in the previous year. The lode mines produced, in gold, \$737,374, or 25 per cent less than in 1916. The greatest gold decrease in any county was in Baker—\$412,427. The 4 dredges in operation in Oregon in 1917 yielded \$618,922, out of a total placer gold production of \$727,366.

SOUTH DAKOTA.

The total value of the gold, silver, copper, and lead produced in South Dakota in 1917, from 30 producing mines, 7 of which were placers, amounted to \$7,526,905, a decrease for the year of \$77,787. The gold output in 1917 was valued at \$7,364,233, a decrease of \$96,411. The production of silver decreased from 215,205 fine ounces to 186,765 fine ounces, but the value increased from \$141,605 to \$153,894. The yield of placer gold amounted to only 45 ounces, some of which went directly into jewelry.

South Dakota has produced, from 1876 to 1917, inclusive, \$207,518,822 in gold and 6,434,503 fine ounces of silver, having a commercial value of \$4,610,504; a total of \$212,129,326.

The Homestake mines and mills operated without interruption. At the Oro Hondo mine, adjoining the Homestake property, the

shaft was sunk from 2,000 feet to 2,200 feet and considerable drifting was done, as well as much diamond drilling. The Golden Reward mill was operated steadily on silicious ores from its own mines. The Mogul mill was operated steadily, chiefly on custom ore. The Trojan mill was operated continuously on company and custom ore. The Bismarck mine and mill were operated for a short period. The Wasp No. 2 Co. did not operate its mine or mill during the year and the mill was dismantled. The New Reliance mine and mill were idle. The Deadwood-Standard mill was operated on ore from the Elk Mountain mines during part of the year.

In the Galena district, the Rattlesnake-Jack was idle, but considerable lead-silver ore was shipped from the district.

A very small yield in placer gold was made in Lawrence and Pennington Counties. Small shipments of copper ore were made from the Keystone and Rochford districts, and of gold ore from the Keystone district.

A small shipment of lead ore was made from the Spokane mine, near Custer.

From 1875 to 1917, inclusive, the Homestake mine has produced a product with a total value of \$154,760,960, and has paid in dividends \$39,785,164.

TEXAS.

Texas mines in 1917 yielded 595,789 ounces of silver, and small quantities of gold, copper, lead, and zinc.

Since the beginning of mining in Texas in 1885 the output of silver has been 13,667,126 fine ounces with a commercial value of \$9,187,862. The greater part of this silver has come from the Presidio silver mine and cyanidation mill, in the Shafter district, Presidio County, which was also actively worked during the year 1917. Small shipments of copper ore were shipped from Foard County during the year. Small shipments of silver-copper ore were shipped from the Van Horn district. Several cars of copper ore were shipped from surface properties near Chillicothe, Hardeman County. Several cars of copper and lead-silver ores were shipped from the Allamoore-Sierra Blanca district, Hudspeth County.

UTAH.

The value of the gold, silver, copper, lead, and zinc in Utah in 1917 was \$99,328,155. This represents an increase of \$10,059,471 over that of 1916, which was \$89,268,684. Part of the increase was due to the higher prices of silver, copper, and lead, though there was a slight increase in the quantity of silver and a good increase in copper. There were decided decreases in lead and zinc, and a slight one in gold.

The gold output was valued at \$3,355,156, a decrease of \$219,791 from that of 1916. Of this total Salt Lake County produced \$2,268,684 in gold and Juab County produced \$843,609. Separated as to source, copper ore was most important, containing gold valued at \$1,960,617. Lead ore supplied in gold \$560,527; lead-zinc ore, \$410,399; siliceous ore, \$421,594; copper-lead ore, \$1,907; and placers, \$112. Concentrates of various kinds produced gold valued

at \$1,522,982, of which the copper concentrates contained \$1,039,396 and the lead concentrates \$465,586. The value of the gold in crude ore shipped to smelters was \$1,799,079, principally in copper ore. There was only \$2,908 in gold from gold and silver bullion. Since Utah produces so little placer gold and gold from ores treated by amalgamation and cyanidation, it will be necessary to increase the quantity of ore and concentrates smelted if the State output is to be materially changed. The smelters were taxed beyond capacity in 1917, and were forced to declare embargoes on ore shipments. One of the copper plants, however, is being enlarged, and a leaching plant at Silver City produced some gold with considerable silver.

The silver output of Utah increased from 13,253,037 ounces in 1916 to 13,479,133 ounces in 1917, or 226,096 ounces. The increase in value, however, was \$2,386,308. Utah, therefore, holds the record of being the largest silver-producing State in 1917. Juab County produced 4,988,005 ounces of silver; Salt Lake County, 3,769,884 ounces; and Summit County, 2,276,583 ounces. Separated as to source, the silver came principally from lead ore, which supplied 7,490,650 ounces. Other sources were copper ore, which supplied 2,225,119 ounces; lead-zinc ore, 1,329,531 ounces; siliceous ore, 2,340,537 ounces; and copper-lead ore, 93,296 ounces. Crude ore shipped to smelters supplied 10,498,129 ounces; concentrates, 2,469,804 ounces; and gold and silver bullion, only 26 ounces. From old tailings, slag, and from ore leached, 511,174 ounces were produced. The Tintic district, in Juab and Utah Counties, produced 5,558,763 ounces, against 5,113,566 ounces in 1916. The Bingham district of Salt Lake County produced 2,786,120 ounces, and the Park City region, in Summit and Wasatch Counties, 2,937,438 ounces.

The copper production of Utah increased from 240,275,222 pounds in 1916 to 246,674,153 pounds in 1917, which is a record for the State. The deep mines also produced 178,521,958 pounds of lead and 21,286,871 pounds of recoverable zinc, a smaller yield in both metals than in 1916.

There were 334 producing properties in 1917, of which 3 were placer mines and the remainder deep mines. The ore output increased from 13,920,643 tons in 1916 to 15,358,481 tons in 1917. Most of this, or 13,718,660 tons, was concentrated, making 813,287 tons of concentrates. There were 1,178,002 tons of crude ore shipped to smelters, and only 190 tons were treated in gold and silver mills. The smelters at Murray, Midvale, Garfield, and Tooele were unusually active during the entire year.

WASHINGTON.

The production of gold, silver, copper, lead, and zinc of Washington in 1917 had a total value of \$2,289,285, an increase of \$240,935 over the production of 1916. There was a good increase in lead, but gold, silver, copper, and zinc decreased in output.

The gold output had a value of \$492,324, a decrease of \$85,331, or nearly 15 per cent. Ferry County, including the Republic district, was the largest gold producer, with \$332,071, and Whatcom County contributed an important amount of gold, valued at \$137,382. Most of the gold, or \$480,426, came from siliceous ore, principally from the

Republic district. Copper ore supplied only \$5,828 in gold, and placers, \$5,868. Lead ore and lead-zinc ore were not important sources. Gold contained in crude ore shipped was valued at \$345,306; gold in bullion, \$139,198; and gold in concentrates, \$1,270. In the last 57 years the average yearly output of gold in Washington was about \$500,000, which is small compared with other Western States.

The silver output in 1917 was 282,320 ounces, a decrease of 52,801 ounces. Stevens County was the main silver producer, with 161,013 ounces, and Ferry County followed closely. Of the total silver, 154,747 ounces had its source in copper ore, 120,510 ounces came from siliceous ores, 5,630 ounces from lead ores, and a few ounces from placers and lead-zinc ore. Concentrates contained 122,556 ounces of silver, shipping ore, 159,174 ounces; and ores treated in gold and silver mills, only 461 ounces.

There were 17 placers and 119 deep producing mines. The latter, in addition to gold and silver, produced 2,199,518 pounds of copper, 9,789,687 pounds of lead, and 1,195,567 pounds of recoverable zinc. The quantity of ore sold or treated was 172,119 tons, an increase of 7,121 tons. Of this quantity, 87,416 tons were shipped directly, 73,673 tons were concentrated, and 10,986 tons were treated in amalgamation or cyanide mills.

WYOMING.

The metal mines of Wyoming during 1917 produced only \$3,728 in gold, 3,415 ounces of silver, and 2,027,857 pounds of copper.

The Hartville district, Platte County, with shipments slightly in excess of those of 1916 in weight of ore but of lower content of copper, maintained its place as the principal producing district in Wyoming in 1917. The increased shipments of copper-platinum-palladium ore from the Rambler property, at Holmes, Albany County, made that district the second in Wyoming. Various shipments of copper-bearing material from the Encampment district, Carbon County (long idle) contributed an appreciable quantity of copper to the State's output. Reopening of properties in the Copper Mountain district, Fremont County, resulted in shipments of copper ore from the Williams-Luman and McGrath mines. Small shipments of copper ore were made from the Muskrat Creek (or Manville) district, Goshen County; a car of copper ore was shipped from the Cokeville district, Lincoln County; and one car of copper ore from Tie Siding, Albany County. Small shipments of gold ore and a small lot of placer gold bullion were made from the Atlantic City district, Fremont County.

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1917, BY STATES.

The Bureau of the Mint and the Geological Survey have issued the following joint statement of the final compilation of the production of gold and silver in the United States during the calendar year 1917:

State or Territory.	Gold.		Silver.	
	Ounces.	Value.	Ounces.	Value. ¹
Alaska.....	709,729	\$14,671,400	1,207,164	\$994,100
Alabama.....	106	2,200		
Arizona.....	250,613	5,180,600	6,962,257	5,733,400
California.....	1,012,461	20,929,400	2,107,107	1,735,200
Colorado.....	772,766	15,974,500	7,291,495	6,004,500
Georgia.....	314	6,500		
Idaho.....	36,511	754,800	11,402,542	9,390,000
Illinois.....			7,116	5,900
Maryland.....			538	400
Michigan.....			684,225	563,400
Missouri.....	15	300	63,344	52,200
Montana.....	177,690	3,673,200	14,555,034	11,986,100
Nevada.....	335,361	6,932,500	11,217,654	9,237,700
New Mexico.....	52,505	1,085,400	1,535,807	1,264,700
North Carolina.....	524	10,800	590	500
Oregon.....	81,624	1,687,300	172,152	141,800
Philippine Islands.....	69,953	1,446,100	12,715	10,500
Porto Rico.....	5	100		
South Carolina.....	82	1,700		
South Dakota.....	356,662	7,372,900	190,382	156,800
Tennessee.....	267	5,500	106,975	88,100
Texas.....	5	100	587,945	484,200

PRODUCTION OF GOLD AND SILVER IN THE UNITED STATES SINCE 1792.

The production of gold and silver from the mines of the United States since 1792 is shown in the following table.

The commercial value of the silver product is reckoned at the average yearly market price of silver on the New York market.

Production of gold and silver in the United States from 1792 to 1844 and annually since.

[The estimate for 1792-1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint.]

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
1792 to July 31, 1834.....	677,250	\$14,000,000	Insignificant.	
July 31, 1834, to Dec. 31, 1844.....	362,812	7,500,000	193,400	\$253,400
1845.....	48,762	1,008,000	38,700	50,200

GOLD AND SILVER USED IN INDUSTRIAL ARTS IN THE UNITED STATES DURING THE CALENDAR YEAR 1917.

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the mint at Philadelphia and the United States assay office at New York hold the foremost places; consequently, the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1917, with the class of material from which they were made:

Gold and silver issued for use in the industrial arts during the year ended Dec. 31, 1917.

Material used.	Value of gold issued by—			Weight of silver issued by—		
	Government institutions.	Private refineries.	Total.	Government institutions.	Private refineries.	Total.
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>	<i>Fine ozs.</i>	<i>Fine ozs.</i>	<i>Fine ozs.</i>
Bullion, old plate, etc.....	45,470,919	3,944,722	49,415,641	3,210,631	23,751,870	26,962,501
United States coin.....		1,079,577	1,079,577		218	218
Total.....	45,470,919	5,024,299	50,495,218	3,210,631	23,752,088	26,962,719

Estimating that the total amount of gold coin used in the arts during the calendar year 1917 has been \$3,500,000, and silver coin \$100,000, equivalent to 77,344 fine ounces, the total industrial consumption of gold was \$52,915,641 and of silver 27,039,845 fine ounces.

In order to arrive at the net consumption in the industrial arts there should be deducted from the foregoing totals the amount of old jewelry, plate, etc., included in the private refinery returns and also the same class of material returned to monetary use. In the year 1917 these amounts aggregated \$18,112,196 in gold and 11,041,038 fine ounces in silver, which leaves \$34,803,445 of gold and 15,998,807 fine ounces of silver as the net amount of new bullion devoted to industrial use.

The table following gives the amounts and classification of the gold and silver used in the industrial arts in the United States since 1880:

Gold furnished for use in manufactures and the arts and classification of the materials used, by calendar years, since 1880.

Calendar years.	New material.			Old material.	Grand total.

COINAGE AT THE UNITED STATES MINTS DURING 1917.

The coinage for domestic use during the calendar year 1917 consisted of 501,030,628 pieces, exceeding that of 1916—which was the largest output in the history of the mint service—by 153,130,159 pieces.

The following statement shows, in detail, the coinage by pieces and value:

Coinage of the United States mints during calendar year 1917.

Denomination.	Philadelphia.		San Francisco.

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873-74 to 1886-87 are estimated only, deduced from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

NOTE.—Later figures are not available.

THE COURSE OF SILVER.

The following review of the London market for silver during the calendar year 1917 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

In reviewing the silver market for the past year, the most striking feature is the very great rise in value which has taken place, the quotation reaching a figure without a parallel since 1878.

The price opened at the beginning of January at 36½d. per ounce standard, but before the month was out had mounted higher than the highest point of last year. After a rise of about 2d. above the starting point, it gradually fell back again, and by the last day of March was again 36½d. per ounce standard. From thence onward the rise was rapid, 38d. being marked in May, 39d. in June, 41d. in July, 46d. by the end of August. After this date the rise was more rapid still, and by the 24th of September the quotation had reached its maximum for the year, 55d. per ounce standard, which remained the figure for several days. In October a general decline began and prices fell away rather quickly as low as 41¾d., when after a temporary reaction to 46d. it continued downward again to 42¾d. on November 26 and remained round about 43d. until the end of the year, slightly improving toward the end, and closing on December 31 at 43½d. per ounce standard.

The average price for 1917 is 40¾d. per ounce standard.

The primary influence during the whole year has been the continued requirement of silver for Government currencies. The home mint alone has coined even more than last year, and our allies have also issued very large amounts; the necessity for this in face of the enormous war expenditure is so manifest that further explanation is needless. The entry of America into the struggle has also brought in a further need of the same sort, and large purchases of silver have been made in that quarter, too; in addition to all which the mintage of rupees in India has run into prodigious figures, for not only have they had to provide for the increased cost of Indian produce, but the war expenditure financed from India for the campaigns in Asia has been very great. Some idea of the extent of this may be gathered from the statement of the financial authority that the war expenditure there for the current year may be estimated at 38½ millions sterling.

As a result of all this coinage the metallic reserve against the note issue in India gained ground, and a smaller denomination of notes may to a certain extent relieve the pressure, but with a total of 110 crores of rupee notes in circulation, the metallic reserve of 21 crores in silver and 25½ crores in gold can not be said to be a sufficient percentage for perfect safety.

The second most potent influence in the movement of prices has been the action of China. It will be remembered that during 1916 an immense quantity of silver was parted with by China to India, leaving the former country very much denuded of stock, and toward the end of last year trading requirements made it necessary for it to enter the market as a buyer. This movement was not constant, and from time to time in the earlier part of 1917 some further sales were made on China account, the high price of silver making it a tempting proposition to withdraw from China at the higher rate of exchange funds formerly invested there. This did not attain any large proportions, and about the beginning of September the Shanghai exchange rose to a very high figure and 4s. 10½d. per tael was reached about this time. The exact reason for this high exchange is not clear, and it was doubtless partly due to speculative dealings. This view seems to be borne out by the fact that although the price of silver in London continued to rise by leaps and bounds and went to its highest figure (55d.) at this period, the Shanghai exchange did not advance further, but all the time extensive purchases of the metal were being made in America for shipment to China from San Francisco, the cost of freight and insurance across the Pacific being so much less than that to Europe that China was able to offer a considerable premium in the States and so intercept the supplies which might otherwise have come this way. This was one of the reasons for the great rise in silver which took place here in September, and buyers in this market had the greatest difficulty to obtain even small amounts. A new departure was now made by a regulation in America forbidding the export to China except under license which could not be very easily obtained, and this action soon produced a striking effect, for the buying for China ceased and speculators started a contrary action which resulted in a sudden and phenomenal reduction in Shanghai exchange to 4s.; and even some of the purchases of silver which had been made were put again on the market, and, increasing the supply for London, became a factor in the considerable fall on this side, the high figure, 55d. per ounce standard for silver, dropping 6d. in four days and thereafter giving way further about one-fourth or three-eighths daily until the quotation got back to a more reasonable rate.

Gold and silver coin and bullion imported into and exported from British India since 1873-74 (British standard ounces).

THE COURSE OF SILVER.

The following review of the London market for silver during the calendar year 1917 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

In reviewing the silver market for the past year, the most striking feature is the very great rise in value which has taken place, the quotation reaching a figure without a parallel since 1878.

The price opened at the beginning of January at 36½d. per ounce standard, but before the month was out had mounted higher than the highest point of last year. After a rise of about 2d. above the starting point, it gradually fell back again, and by the last day of March was again 36½d. per ounce standard. From thence onward the rise was rapid, 38d. being marked in May, 39d. in June, 41d. in July, 46d. by the end of August. After this date the rise was more rapid still, and by the 24th of September the quotation had reached its maximum for the year, 55d. per ounce standard, which remained the figure for several days. In October a general decline began and prices fell away rather quickly as low as 41¾d., when after a temporary reaction to 46d. it continued downward again to 42¾d. on November 26 and remained round about 43d. until the end of the year, slightly improving toward the end, and closing on December 31 at 43½d. per ounce standard.

The average price for 1917 is 40¾d. per ounce standard.

The primary influence during the whole year has been the continued requirement of silver for Government currencies. The home mint alone has coined even more than last year, and our allies have also issued very large amounts; the necessity for this in face of the enormous war expenditure is so manifest that further explanation is needless. The entry of America into the struggle has also brought in a further need of the same sort, and large purchases of silver have been made in that quarter, too; in addition to all which the mintage of rupees in India has run into prodigious figures, for not only have they had to provide for the increased cost of Indian produce, but the war expenditure financed from India for the campaigns in Asia has been very great. Some idea of the extent of this may be gathered from the statement of the financial authority that the war expenditure there for the current year may be estimated at 38½ millions sterling.

As a result of all this coinage the metallic reserve against the note issue in India gained ground, and a smaller denomination of notes may to a certain extent relieve the pressure, but with a total of 110 crores of rupee notes in circulation, the metallic reserve of 21 crores in silver and 25½ crores in gold can not be said to be a sufficient percentage for perfect safety.

The second most potent influence in the movement of prices has been the action of China. It will be remembered that during 1916 an immense quantity of silver was parted with by China to India, leaving the former country very much denuded of stock, and toward the end of last year trading requirements made it necessary for it to enter the market as a buyer. This movement was not constant, and from time to time in the earlier part of 1917 some further sales were made on China account, the high price of silver making it a tempting proposition to withdraw from China at the higher rate of exchange funds formerly invested there. This did not attain any large proportions, and about the beginning of September the Shanghai exchange rose to a very high figure and 4s. 10½d. per tael was reached about this time. The exact reason for this high exchange is not clear, and it was doubtless partly due to speculative dealings. This view seems to be borne out by the fact that although the price of silver in London continued to rise by leaps and bounds and went to its highest figure (55d.) at this period, the Shanghai exchange did not advance further, but all the time extensive purchases of the metal were being made in America for shipment to China from San Francisco, the cost of freight and insurance across the Pacific being so much less than that to Europe that China was able to offer a considerable premium in the States and so intercept the supplies which might otherwise have come this way. This was one of the reasons for the great rise in silver which took place here in September, and buyers in this market had the greatest difficulty to obtain even small amounts. A new departure was now made by a regulation in America forbidding the export to China except under license which could not be very easily obtained, and this action soon produced a striking effect, for the buying for China ceased and speculators started a contrary action which resulted in a sudden and phenomenal reduction in Shanghai exchange to 4s.; and even some of the purchases of silver which had been made were put again on the market, and, increasing the supply for London, became a factor in the ping 6d. in four days and thereafter giving way further about one-fourth or three-eighths daily until the quotation got back to a more reasonable rate.

The conditions throughout the year have been abnormal and to some extent artificial. Formerly the silver from the United States, which is the ordinary source of supply and includes what is produced in Mexico, was offered freely in the market day by day to meet the wants of India, China, and the European Continent, but in the early part of this year some arrangement was made by which a large proportion of these supplies was put at the disposal of the Government on terms which are not generally known, but the effect was that the large public needs previously alluded to were more easily bought and power was attained to supply the remaining reduced buying at prices which were more convenient to the authorities, and by this means lower rates have from time to time been brought about than might otherwise have been the case. This position was accentuated by the request made to the silver brokers by the Treasury that speculative transactions should not be countenanced, which request has been generally observed; later on, a regulation came into force restricting the shipment of silver to Scandinavia and adjacent countries, which had a further result of obstructing the purchases which usually take place for those quarters, a by no means inconsiderable portion of the buying which usually had to be satisfied. The result has been that the scope of business on the London market has been much smaller than formerly, and in forming an opinion as to the future these factors have to be taken into consideration.

The public newspapers of December 5 contained the following statement: "It is announced by the United States Treasury Department that the Government will take over the country's silver output and will fix the price," but no definite information has been available since that date, and it is not at all clear whether this announcement refers really to the total output of the United States or whether it applies to the endeavor which was known to be in progress to secure for the United States and the English Governments a very large amount—described by some as 100,000,000 ounces, by others as 150,000,000 ounces—deliverable during the year 1918, partly for coining into rupees in India, and partly into French currency for the use of American soldiers in France, but in either case it is evident that action of this sort must have a very great influence upon the price of silver next year. The fact that after three weeks no definite decision has been arrived at points to difficulty in inducing producers to accept the offered terms and suggests that a higher price may have to be fixed than was originally thought probable. If the arrangement can be effected the general opinion is that silver prices will soon be higher than at present, although those competent to express an opinion are not unanimous on the point, some thinking that so large a provision for future needs might so relieve the pressure to buy that prices may recede; the more prevalent opinion points to the former, but whether the quotation mounts to such figures as have been realized this year is very doubtful, although the possibility of China requiring to buy more must not be overlooked.

[From Bulletin de Statistique, January, 1918.]

The war has not failed to have its destructive effect upon the production of silver the world over. The loss for the three years 1914, 1915, and 1916 is estimated at 90 million ounces. This inevitably made a rise in the price of silver on the London market. But the exceptional rise in the price of silver during the year 1917 is not due wholly to the small production during the last three years. The frequent fluctuations observed during the year 1917 were unquestionably due to other causes. The rise of price in February was due to the large amount of silver China bought at San Francisco. Then the price fell but rose again toward the end of April, when the United States, having declared war, purchased silver for subsidiary coinage. Further purchases by China in June and July and a large order for coins for the Italian Government contributed to keep the price up. The price fell at the end of July when China stopped buying and began to sell; but it rose again in August. Then the United States and India prohibited the export of silver coinage as bullion, and the price rose immediately by leaps and bounds to reach 55 pence September 21-25. Not since 1878 had the price of silver been so high. September 27, however, the price fell again, to the end of October. This phenomenon is explained mainly by the fact that China from buyer became again a seller and that England prohibited the export of silver into Holland and Scandinavia. The slight rise during November and December is probably due to the imperative needs for arts or the failure to make deliveries. To sum up, the fluctuations during 1917 were due principally to the behavior of China, which bought on a large scale one month to sell the next. The world silver coinage, in my opinion, had only a secondary effect, including the large coinage of India. That coinage merely prevented the great fall which the large sales of China would have otherwise caused.

IMPORTANT SILVER SHIPMENTS MADE DIRECT TO THE EAST INSTEAD OF "THROUGH LONDON."

[From Engineering and Mining Journal, New York, Jan. 12, 1918.]

The usual flow of silver via New York to London and from London to India and China has been interfered with markedly during the last half of 1917 by the high cost of transportation from both New York to London and from London to India. This has resulted in diverting a large proportion of the production of silver in the United States to the Pacific coast for shipment from Pacific ports to India and China. At first the London brokers made a great effort to continue to purchase in New York, shipments to be made at their option. Large governmental purchases, however, made for Russia, China, and the India governments broke the hold of the London brokers, and silver was largely sold in unusual quantities for shipment over considerable periods of time. It is known that, during the last half of the year, seven separate sales transactions covered as large a quantity as 20,000,000 ounces. This left the New York market in great uncertainty. There were periods of weeks at a time when there was no market for silver excepting London, and yet there was no considerable supply of silver for shipment to London. This resulted in the New York market being obliged to ignore the demand via San Francisco in the daily market quotations.

India was able to secure approximately 40,000,000 ounces of sycee silver from China and about 15,000,000 Philippine coined dollars (which had been held in the Philippine treasury for many years) before the full advance in prices registered during the fall months. The demand for rupees, however, was so great that new coinage took place during the year to the number of 207,737,326 (\$67,389,988) against 16,000,000 (\$5,190,400) in the previous year.

Highest, lowest, and average price of silver bullion in London, and the United States equivalent value of a fine ounce each month.

Average commercial ratio of silver to gold each calendar year since 1687.

[NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cablegrams from London to the Bureau of the Mint, and since from daily London quotations.]

VALUES OF FOREIGN COINS.

The following values, calculated by the Director of the Mint, were proclaimed by the Secretary of the Treasury under the provisions of section 25 of the act of August 27, 1894, as the basis for estimating the value of foreign merchandise exported to the United States during the quarter beginning October 1, 1918:

Country.	Legal standard.	Monetary unit.	Value in terms of United States money.	Remarks. ¹
Argentine Republic....	Gold.....	Peso.....	\$0.9648	Currency: Depreciated paper, convertible at 41 per cent of face value; exchange rate about \$0.4475.
Austria-Hungary.....	do.....	Krone.....	.2026	Greatly depreciated; no quotations.
Belgium.....	Gold and silver.	Franc.....	.1930	Member of Latin Union; gold is the actual standard.
Bolivia.....	Gold.....	Boliviano.....	.3893	12½ bolivianos equal 1 pound sterling.
Brazil.....	do.....	Milreis.....	.5462	Currency: Government paper; exchange rate about 23 cents to the milreis.
British Colonies in Australasia and Africa.	do.....	Pound sterling.....	4.8665	
Canada.....	do.....	Dollar.....	1.0000	
Central American States:				
Costa Rica.....	do.....	Colon.....	.4653	Exchange rate \$0.25=1 colon.
British Honduras.....	do.....	Dollar.....	1.0000	
Nicaragua.....	do.....	Cordoba.....	1.0000	Exchange rate \$1=1.01 cordobas.
Guatemala.....	Silver.....	Peso.....	.7234	Guatemala: Currency, inconvertible paper; exchange rate about \$0.40.
Honduras.....				Honduras: Currency, bank notes; exchange rate about \$0.55.
Salvador.....				Salvador: Currency, bank notes convertible into silver on demand; exchange rate about \$0.40.
Chile.....	Gold.....	do.....	.3650	Currency: Inconvertible paper; exchange rate about \$0.32.
China.....	Silver.....	Tael.....	Amoy..... 1.1859	The tael is a unit of weight, not a coin. The customs unit is the Haikwan tael. The values of other taels are based on their relation to the value of the Haikwan tael. The Yuan silver dollar of 100 cents is the monetary unit of the Chinese Republic; it is equivalent to 0.644+ of the Haikwan tael.
			Canton..... 1.1823	
			Cheefoo..... 1.1342	
			Chin Kiang..... 1.1585

PLATINUM.

[Extract from the London Economist, May 25, 1918.]

The rise in the market value of platinum has in recent years been very rapid. A hundred and eighty years ago the price paid for the metal in what is now the Republic of Colombia was 2 pesos, or, say, 4 shillings, a pound. A few years later it was 8 piastres, or about £3 sterling (= U. S. \$14.60). Forty years ago the price was 25s. per troy ounce (15 per pound); in 1909, £5 per troy ounce; by 1913 the price had risen to £9 per troy ounce; by 1916 to £12; 1917, £14 10s.; and now, as stated, it is £20 in the United Kingdom; 17,500 francs (= U. S. \$3,377.50) per kilo., the equivalent of the British £20 per ounce, in France, and £21 (= U. S. \$102.20) in the United States.

In January, 1916, urged by the scarcity of the metal, partly caused by a great falling off in the production of Russia, and no less by its indispensability and consequent greater demand for many war purposes, the British Government constituted platinum a monopoly, and called for a return of all the metal in stock—whether in ingots or manufactured—from metallurgists, jewelers, dental manufacturers, pawnbrokers, and platinum users generally. A well-known firm was appointed purchasing agent, and the price fixed at the beginning at £9 per troy ounce, which in the same year was increased by £3 per troy ounce, as already indicated. Since then the scarcity has been greatly accentuated. The falling off in the supplies from the Urals of Russia was very considerable even before the war, owing to exhaustion of the deposits. For instance: The production of that country in 1910 was 240,000 troy ounces, or about 90 per cent of the total output of the world. By 1912 the annual production had lessened to 185,381 troy ounces; by 1914 to 156,775 troy ounces. Then came two great drops, due to war dislocation, viz, to 107,774 troy ounces in 1915, and to 78,674 troy ounces, the last recorded output, in 1916. So that, as will be seen, the Russian production since 1910 has fallen about 70 per cent. In consequence of the Russian situation considerable developments are taking place elsewhere, and particularly in the Republic of Colombia, where platinum, then long known to the natives, was originally discovered to be a valuable metal by the Spaniards in 1737. They, indeed, gave it its name of "platina," derived from "plata," silver. It was from the country of the ancient Chocó Indians, now the Intendencia of the Chocó in the Colombian Republic, that platinum was first sent to Europe by representatives of the Spanish Crown, who, although they only offered 4 shillings a pound for it, had a fair idea of its possibilities. There is no doubt that the alluvial platiniferous region in the Intendencia is of very great extent, and comprises a large proportion of the 20,000 to 25,000 square miles included within the total area, all of which is intersected by a network of rivers and streams that will greatly simplify the operations of dredges and of the hydraulicking and sluicing plants now fast superseding the bateas used by the natives for washing earth and gravels for platinum and gold from time immemorial. It may also be interesting to note that in the Chocó the platinum is generally found accompanied by gold in similar grains or flakes and small nuggets, but quite separate, the proportions being usually three-fourths platinum and one-fourth gold.

That platinum possesses unusual qualities goes without saying, or its price to-day would not be about five times that of gold, but the uses which have made its production a matter of such concern to Governments are not generally known. To begin with its qualities: In addition to a little iron the crude metal contains a percentage of other valuable "associate" metals, sometimes of one or more, sometimes of all of them. They are iridium, palladium, osmium, rhodium, and ruthenium. Of these iridium is reported to have recently sold at £38 (= U. S. \$185) per troy ounce, while palladium is now quoted, at least in the United States, at from \$7 to \$10 per troy ounce over and above the price of platinum. Alloyed with iridium—that is, with the iridium replaced—platinum becomes the hardest and toughest of metals. With or without iridium it does not tarnish and will not rust. Its melting point is very high, viz, 1,775° C., in the oxyhydrogen jet. It is a very poor conductor of electricity and heat, hence its former use for the "leading-in" wires of electric lamps. It is one of the heaviest of known substances. It has the lowest coefficient of expansion of any metal. Its malleability is very great, and its ductility such that wire no thicker than a spider's web can be drawn from it. It is impermeable to hydrochloric acid gas, oxygen, chlorine, carbon monoxide and dioxide, and steam. Except in aqua regia, a combination of nitric and hydrochloric acids, it is insoluble in acids.

Its use would not now be permissible in jewelry, or dentistry, or in electric lamps, even if it were less costly, for all the platinum that can be obtained is required for war purposes, or purposes connected with the war. For magnetos, the contact points of the ignition systems of engines for aeroplanes, hydroplanes, armored cars, tanks, and all kinds of petrol-driven engines it is indispensable. It is of the first importance in the manufacture of fuming sulphuric acid, a basis of high explosives. It is utilized in the electric apparatus controlling the fire of big guns, in field telegraph and telephone instruments, in thermocouples, in crucibles. In short, its uses are legion, and in all of them it has no equal.

MONETARY LEGISLATION.

[PUBLIC—No. 139—65TH CONGRESS.]

[S. 4292.]

AN ACT To conserve the gold supply of the United States; to permit the settlement in silver of trade balances adverse to the United States; to provide silver for subsidiary coinage and for commercial use; to assist foreign governments at war with the enemies of the United States; and for the above purposes to stabilize the price and encourage the production of silver.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby authorized from time to time to melt or break up and to sell as bullion not in excess of three hundred and fifty million standard silver dollars now or hereafter held in the Treasury of the United States. Any silver certificates which may be outstanding against such standard silver dollars so melted or broken up shall be retired at the rate of \$1 face amount of such certificates for each standard silver dollar so melted or broken up. Sales of such bullion shall be made at such prices not less than \$1 per ounce of silver one thousand fine and upon such terms as shall be established from time to time by the Secretary of the Treasury.

SEC. 2. That upon every such sale of bullion from time to time the Secretary of the Treasury shall immediately direct the Director of the Mint to purchase in the United States, of the product of mines situated in the United States and of reduction works

so located, an amount of silver equal to three hundred and seventy-one and twenty-five hundredths grains of pure silver in respect of every standard silver dollar so melted or broken up and sold as bullion. Such purchases shall be made in accordance with the then existing regulations of the Mint and at the fixed price of \$1 per ounce of silver one thousand fine, delivered at the option of the Director of the Mint at New York, Philadelphia, Denver, or San Francisco. Such silver so purchased may be resold for any of the purposes hereinafter specified in section three of this Act, under rules and regulations to be established by the Secretary of the Treasury, and any excess of such silver so purchased over and above the requirements for such purposes, shall be coined, into standard silver dollars or held for the purpose of such coinage, and silver certificates shall be issued to the amount of such coinage. The net amount of silver so purchased, after making allowance for all resales, shall not exceed at any one time the amount needed to coin an aggregate number of standard silver dollars equal to the aggregate number of standard silver dollars theretofore melted or broken up and sold as bullion under the provisions of this Act, but such purchases of silver shall continue until the net amount of silver so purchased, after making allowance for all resales, shall be sufficient to coin therefrom an aggregate number of standard silver dollars equal to the aggregate number of standard silver dollars theretofore so melted or broken up and sold as bullion.

SEC. 3. That sales of silver bullion under authority of this Act may be made for the purpose of conserving the existing stock of gold in the United States, of facilitating the settlement in silver of trade balances adverse to the United States, of providing silver for subsidiary coinage and for commercial use, and of assisting foreign governments at war with the enemies of the United States. The allocation of any silver to the Director of the Mint for subsidiary coinage shall, for the purposes of this Act, be regarded as a sale or resale.

SEC. 4. That the Secretary of the Treasury is authorized, from any moneys in the Treasury not otherwise appropriated, to reimburse the Treasurer of the United States for the difference between the nominal or face value of all standard silver dollars so melted or broken up and the value of the silver bullion, at \$1 per ounce of silver one thousand fine, resulting from the melting or breaking up of such standard silver dollars.

SEC. 5. That in order to prevent contraction of the currency, the Federal reserve banks may be either permitted or required by the Federal Reserve Board, at the request of the Secretary of the Treasury, to issue Federal reserve bank notes, in any denominations (including denominations of \$1 and \$2) authorized by the Federal Reserve Board, in an aggregate amount not exceeding the amount of standard silver dollars melted or broken up and sold as bullion under authority of this Act, upon deposit as provided by law with the Treasurer of the United States as security therefor, of United States certificates of indebtedness, or of United States one-year gold notes. The Secretary of the Treasury may, at his option, extend the time of payment of any maturing United States certificates of indebtedness deposited as security for such Federal reserve bank notes for any period not exceeding one year at any one extension and may, at his option, pay such certificates of indebtedness prior to maturity, whether or not so extended. The deposit of United States certificates of indebtedness by Federal reserve banks as security for Federal reserve bank notes under authority of this Act shall be deemed to constitute an agreement on the part of the Federal reserve bank making such deposit that the Secretary of the Treasury may so extend the time of payment of such certificates of indebtedness beyond the original maturity date or beyond any maturity date to which such certificates of indebtedness may have been extended, and that the Secretary of the Treasury may pay such certificates in advance of maturity, whether or not so extended.

SEC. 6. That as and when standard silver dollars shall be coined out of bullion purchased under authority of this Act, the Federal reserve banks shall be required by the Federal Reserve Board to retire Federal reserve bank notes issued under authority of section five of this Act, if then outstanding, in an amount equal to the amount of standard silver dollars so coined, and the Secretary of the Treasury shall pay off and cancel any United States certificates of indebtedness deposited as security for Federal reserve bank notes so retired.

SEC. 7. That the tax on any Federal reserve bank notes issued under authority of this Act, secured by the deposit of United States certificates of indebtedness or United States one-year gold notes, shall be so adjusted that the net return on such certificates of indebtedness, or such one-year gold notes, calculated on the face value thereof, shall be equal to the net return on United States two per cent bonds, used to secure Federal reserve bank notes, after deducting the amount of the tax upon such Federal reserve bank notes so secured.

SEC. 8. That except as herein provided, Federal reserve bank notes issued under authority of this Act, shall be subject to all existing provisions of law relating to Federal reserve bank notes.

SEC. 9. That the provisions of Title VII of an Act approved June fifteenth, nineteen hundred and seventeen, entitled "An Act to punish acts of interference with the foreign relations, the neutrality, and the foreign commerce of the United States, to punish espionage, and better to enforce the criminal laws of the United States, and for other purposes," and the powers conferred upon the President by subsection (b) of section five of an Act approved October sixth, nineteen hundred and seventeen, known as the "Trading with the Enemy Act," shall, in so far as applicable to the exportation from or shipment from or taking out of the United States of silver coin or silver bullion, continue until the net amount of silver required by section two of this Act shall have been purchased as therein provided.

Approved, April 23, 1918.

[PUBLIC—No. 163—65TH CONGRESS.]

[H. R. 8764.]

AN ACT To authorize the coinage of fifty-cent pieces in commemoration of the one hundredth anniversary of the admission of the State of Illinois into the Union.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, as soon as practicable, and in commemoration of the one hundredth anniversary of the admission of the State of Illinois into the Union as a State, there shall be coined at the mints of the United States, silver fifty-cent pieces to the number of one hundred thousand, such fifty-cent pieces to be of the standard troy weight, composition, diameter, device, and design, as shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury, and said fifty-cent pieces shall be legal tender in any payment to the amount of their face value.

SEC. 2. That all laws now in force relating to the subsidiary silver coins of the United States and the coining or striking of the same, regulating and guarding the process of coinage, providing for the purchase of material, and for the transportation, distribution, and redemption of the coins, for the prevention of debasement or counterfeiting, for security of the coin, or for any other purpose, whether said laws are penal or otherwise, shall, so far as applicable, apply to the coinage herein authorized: *Provided*, That the Government shall not be subject to the expense of making the necessary dies and other preparations for this coinage.

Approved, June 1, 1918.

FOREIGN AND WORLD MONETARY STATISTICS.

The statistics of foreign countries on production, import, and export of gold and silver, coinage and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

A list of interrogatories covering the points on which information is sought is sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

In the absence of official returns from foreign countries the most reliable data available are used in compiling world statistics.

Receipts of replies to the interrogatories have been limited or delayed in transmission and the available data covering coinage and stocks of money in the different countries of the world as of December 31, 1917, are so meager and so generally unsatisfactory as not to warrant preparation of the usual table showing comparative figures and their aggregates.

Such information as is available follows:

NORTH AMERICA.

CANADA.

Coinage during the year ended Dec. 31, 1917.

OUTPUT OF GOLD AND SILVER IN CANADA, 1917.

[From the Mining Journal, London, April 6, 1918.]

As we anticipated on earlier occasions, the output of gold in Canada last year showed a very marked falling off. The total is estimated at 747,366 fine ounces, compared with 930,492 fine ounces in 1916, a falling off of 183,126 fine ounces, or 19.68 per cent. The Ontario output was 431,355 fine ounces, a decrease of 12 per cent on the year. The chief decline was in the west. British Columbia, with a total of 134,327 fine ounces, was 39 per cent short, while the Yukon, with 177,600 fine ounces, showed a decrease of 16 per cent. The output of Nova Scotia was 2,270 fine ounces, and from Manitoba about 500 fine ounces. Here, however, great hopes are entertained of the gold and copper ores of the Herb and Schist Lakes in the new Pas mining division. The position of the mines is probably strengthened by the conservative policy which the gold situation has forced on managements, as attention is being turned to development rather than to output.

The output of silver amounted to 22,150,680 fine ounces against 25,459,741 fine ounces in 1916, a decline of 3,309,061 fine ounces. The production from Ontario, which was practically all from Cobalt and the adjoining camps, amounted to 19,254,616 fine ounces compared with 21,975,942 fine ounces in the previous year. The British Columbia output amounted to 2,580,521 fine ounces against 3,392,872 fine ounces in 1916. Quebec showed a considerable increase on its small production, the amount recorded being 217,191 fine ounces, against 98,610 fine ounces in 1916. The increase is due to the more active working of pyrites and the zinc-lead ores of Notre Dame des Anges. On the other hand, the Yukon production fell from 360,101 ounces to 90,772 ounces. The price for silver averaged 81.417 cents for the year.

CANADIAN BANKING IN 1917.

[From the Bankers' Magazine, London, May, 1918.]

Under the war finance act of 1914 the Government had authority to make new issues of its currency notes to the banks in the form of loans against approved securities. So recourse was had to this method: The bank pledged their approved securities, presumably British treasury bills; the minister delivered to them his newly issued Dominion legal-tender notes; and the banks used the new currency to lend fresh money to Great Britain on security of Canadian wheat. The issues of Dominion notes "against approved securities" amounted to \$11,000,000 on December 31. These transactions, of course, further swelled the banking totals. In order to show the exact position of the Dominion note circulation, nearly all of which is held by the banks, the following statement of changes in 1917 is given:

Dominion note circulation.

Month.	Outstanding.	Gold reserve.	Month.	Outstanding.	Gold reserve.
1917			1917		
January.....	\$185,032,291	\$114,105,144	July.....	\$181,841,576	\$120,006,568
February.....	182,323,382	114,101,617	August.....	182,100,624	119,978,567
March.....	183,248,986	113,110,154	September.....	192,377,969	119,877,149
April.....	187,872,336	113,139,691	October.....	229,063,856	114,616,227
May.....	177,833,324	113,137,678	November.....	266,172,765	114,666,778
June.....	178,568,009	119,110,113	December.....	272,934,814	114,771,861

It should be noted that the expansion of the Dominion Government's issues not covered by gold is based first on the short-date obligations of the British Government, and, second, presumably on the grain held in store. When the grain is paid for, the issues will contract and the inflation will be corrected to that extent.

The bank note circulation again shows a great increase. Its movement in 1917, as compared with 1916 and 1915, was as follows:

Bank note circulation.

Month.	1917	1916	1915
January.....	\$133,358,187	\$111,029,572	\$97,192,699
February.....	138,257,295	113,528,237	97,789,392
March.....	148,265,140	114,804,604	96,666,544
April.....	145,550,619	119,233,330	96,288,398
May.....	142,653,596	114,847,323	99,125,136
June.....	156,625,701	123,373,395	99,625,426
July.....	154,692,268	123,530,451	100,412,424
August.....	156,450,657	122,656,083	99,610,962
September.....	177,589,268	135,285,031	105,798,618
October.....	189,852,907	145,031,667	122,782,233
November.....	196,135,810	148,197,971	124,153,685
December.....	192,923,824	148,785,287	122,199,582
Average.....	161,029,606	126,691,912	105,137,092

At the highest point in 1917 the bank-note circulation was \$84,466,040 in excess of the paid-up capital of the banks, and practically all of this excess was covered dollar for dollar by deposits of gold or Dominion notes in the central gold reserve.

Assets of the Canadian banks on Dec. 31, 1917, and a comparison with Dec. 31, 1916.

Assets.	Dec. 31, 1916.	Dec. 31, 1917.
Specie.....	\$71,172,169	\$82,032,863
Dominion notes.....	124,750,241	167,509,121
Deposits in central gold reserves.....	43,700,000	97,270,000
Notes and checks, other banks.....	96,537,562	119,677,841
Deposits in other banks, Canada.....	6,090,068	6,995,230
Due by banks in United States.....	25,972,563	13,372,044
Due by banks in foreign countries.....	50,448,693	51,355,562
Dominion and provincial government securities.....	31,092,081	188,703,175
Canadian municipal and British foreign colonial public securities.....	167,578,788	224,093,823
Railway and other bonds.....	64,107,540	55,609,275
Call loans on stocks and bonds, Canada.....	82,569,983	71,779,020
Call loans on stocks and bonds, elsewhere.....	173,878,134	134,483,482
Total reckoned as available at once.....	937,897,822	1,212,881,436
Circulation redemption fund.....	6,861,475	5,769,631
Current loans and discounts, Canada.....	820,378,557	858,533,298
Current loans and discounts, elsewhere.....	76,396,720	11,581,098
Loans to the Government of Canada.....	3,970,000	9,774,419
Loans to provincial governments.....	1,967,743	36,353,039
Loans to cities, towns, municipalities, and school districts.....	24,056,797	4,859,343
Overdue debts.....	5,760,812	7,374,729
Real estate and mortgage.....	7,229,445	51,484,586
Bank premises.....	49,788,940	21,981,345
Liabilities of customers (letters of credit).....	9,131,318	2,570,703
Other assets.....	4,604,451	
Total assets.....	1,948,044,080	2,323,163,627

The greater part of the increase shown in the total reckoned as available at once is represented by the Government securities. Considering that these are special loans for war purposes, which are not, in some cases, immediately realizable, it is scarcely correct to characterize the whole amount as available.

NEWFOUNDLAND.

According to the Numismatist a new 25-cent piece was issued in 1917 to supersede the 20-cent piece. This coinage was authorized by proclamation issued at St. Johns, Newfoundland, April 24, 1917, but dated at Buckingham Palace March 30. The coinage was executed at the Ottawa, Canada, mint.

LAWS AFFECTING THE MONETARY SYSTEM.

[From El Universal, Mexico City, Aug. 4, 1917.]

The gold coin of the denomination of 20 pesos, established in accordance with the decree of June 27, 1917, will have a diameter of $27\frac{1}{2}$ millimeters; the margin of error in the weight of the unit will be 40 milligrams, overweight or underweight according to the theoretical weight of $16\frac{2}{3}$ grams, and the margin of error according to the law will be one one-thousandth, over or under, according to the theoretical law of nine hundred one-thousandths.

SILVER ORES TO BE REWORKED.

[From Bulletin of the Pan American Union, July, 1918.]

In the mining districts of the northwestern part of the State of Coahuila there are estimated to be from 8,000,000 to 10,000,000 tons of silver-lead low-grade ores, now abandoned, which will soon be hauled to the smelters at Monterey and other parts of the country for treatment. A railway 160 kilometers long is being constructed from Cuatro Ciénegas to Sierra Mojada, State of Coahuila, and as soon as completed will begin to transport these ores to the smelters.

EXCHANGE OF MEXICAN FOR UNITED STATES CURRENCY.

[From Bulletin of the Pan American Union, February, 1917.]

According to an order issued by the treasury department, in future American gold and currency will be taken in exchange for Mexican specie at the rate of \$1.80 of the latter for \$1 of the former, instead of the former rate of two Mexican pesos for one American dollar.

The national mint has recently coined a large number of "Hidalgos," or 10-dollar gold pieces, as well as a large quantity of fractional silver coins of a denomination of less than 1 peso.

MONETARY SITUATION IN VERA CRUZ DISTRICT.

[From the Numismatist, May, 1917.]

For the past two or three years the people of Mexico have, in general, been retaining all of the metallic currency that came into their possession, which resulted in bills being the only money in circulation until recently.

The last issue of paper money, known as "infalsificable" (uncounterfeitable), placed in circulation by the de facto Government in June, 1916, on a basis of 20 centavos Mexican gold to the peso, is now refused by the public. A few months ago, on account of the depreciation of this currency, the Government adopted the plan of fixing for commercial transactions the official rate of exchange every 10 days, at which the public is supposed to accept the "infalsificables." This is now (Jan. 2, 1917) 150 to 1, or 0.66 centavo Mexican gold a peso, but some weeks ago the purchasing power of these bills in buying American money had depreciated until they reached rates ranging from 350 to 400 pesos for \$1. Then the people declined to accept the paper.

No attempt is made by the authorities to compel the people to accept the money, as they did in the case of the Vera Cruz bills directly after the "infalsificables" were placed in circulation, and the Vera Cruz paper depreciated to about 400 to 1 for American money. Until the last-named Mexican currency was officially retired, persons who declined to accept it were imprisoned and heavily fined.

The action of the Government not long since in requiring that customs duties, land taxes, postage, telegraph charges, etc., be paid in national gold or silver resulted in a considerable amount of this currency being placed in circulation again by the people, but not enough to meet the demands, as there does not appear to be a sufficient supply of this money in the country. Before this action was taken the custom charges were payable in either Mexican coin or American money on the basis of \$1 for 2 pesos, and when the notice decreeing duties payable only in Mexican metallic currency went into effect, it created a demand for this money so far in excess of the supply that the exchange rate at once rose to several points above par in the local market. The silver peso and 50-centavo pieces and the 5 and 10 peso and gold pieces sold as high as \$0.57 United States currency per peso. Subsequently the Government decreed that 50 per cent of the customs duties might be paid in American money and the balance would be required in Mexican silver or gold. However, as there is still not sufficient of the latter coin for all purposes, the price is as high as \$0.56. (The normal rate of exchange, as fixed by the United States Treasury, is \$0.4985.)

To relieve the shortage of money the Government is encouraging the importation of American currency. Several shipments of United States currency have been received by local firms within the last few weeks, but very little of the money has been put in circulation.

RETIREMENT OF MEXICAN PAPER CURRENCY.

[From the Numismatist, June, 1917.]

The American ambassador to Mexico has transmitted a translation of a decree issued by President Carranza, March 29, 1917, providing for the retirement of the paper pesos known as "infalsificables" by means of a surtax on imports, exports, and mineral products. Beginning April 1, 1917, a surtax of 1 paper peso is to be collected for every gold peso paid on account of import duties, export duties, and production taxes on petroleum and metals. The decree states that this method of retiring the "infalsificables" is considered satisfactory, as it will impose only a slight additional burden on importers, exporters, and mine owners, owing to the very low exchange value of the paper peso. As the value of the "infalsificables" was recently reported to be one-third of a cent United States currency, the effect of the new surtax will be negligible.

DOMINICAN REPUBLIC (SANTO DOMINGO).

The amount of gold and silver used in the industrial arts is negligible. No data are available.

It is impossible to obtain even approximate figures concerning stock of money which would be sufficiently accurate to be given. There are in circulation about \$1,500,000 in United States currency and about \$500,000 in Dominican national coins.

PREMIUM ON GOLD FOR 1917.

Owing to embargo on shipments of gold from the United States and the fact that many contracts are drawn payable in gold coin and only a few thousand dollars in gold is in circulation, a premium is demanded of from 1 to 5 per cent. This condition became so serious that the following Executive order was issued April 18, 1918:

"In article 5 of the decree of the National Congress of the 19th of June, 1905, promulgated the 21st of the same month and published in the Official Gazette No. 1599 of the 24th of June of the same year, where it reads "en oro del cuño americano" (in American gold coin), it shall mean "en oro del cuño americano, ó en billetes americanos de curso legal en los Estados Unidos de América" (in American gold coin, or in American bills which have legal currency in the United States of America).

Except where contracts specify "gold coin," the money in circulation is at par.

United States lawful coinage imported during the year ended December 31, 1917, was estimated at \$500,000.

United States lawful coinage exported to the United States during the year ended December 31, 1917, was estimated at \$280,000.

HAITI.

Amount of gold and silver withdrawn from monetary use negligible. No statistics.

Amount of gold and silver used in the industrial arts negligible. No record kept.

No data available on stock used for monetary purposes.

The premium on gold for 1917 was 400 per cent.

The actual currency of the country is the paper gourde, which exchanges at 5 for 1. Nickel fractional coins circulate.

COSTA RICA.

DECREE AS TO COINAGE OF COPPER IN COSTA RICA.

[From LaGaceta (official daily), Costa Rica, No. 105, dated Nov. 4, 1917.]

LAW No. 252 (SAN JOSE, NOV. 3, 1917).

In conformity with article 4th of the Law, Number 41, of September 7 last, the President of the Republic approves:

To authorize the circulation of pieces of copper of ten centimos each, coined in the national mint, with the corresponding alloy (75 per cent copper, 25 per cent nickel), to the limit of fifty thousand colones (C50,000).

Said money shall have engraved on the face the national shield with the words "Republica de Costa Rica, 1917." On the reverse it shall have engraved two coffee branches interlaced; in the center the words "Diez centimos" (ten centimos), on the upper part the words "America Central," and at the bottom the initials "G. C. R."

For a permanent record the proper officials shall, by a special act, deposit the identifying token of the money coined with this document in the national archives.

Let it be published.

(Signed) TINOCO.

The minister of state in the office of treasury and commerce.

(Signed) MANUEL F. JIMENEZ.

[From United States consul.]

Law No. 41, of September 7, 1917, article 4, as published in La Gaceta, No. 59, of September 8, 1917, provides: "The executive power is authorized to coin money of either copper or nickel of 10 and 5 centimes, in quantities not to exceed 10 per cent of the coined silver in circulation."

The new coins are in demand owing to the absence of convenient change, earlier coinage of silver having practically disappeared along with that having more pure silver. The tendency, however, is to raise the rate of exchange. To control the present issue of copper coins, not more than 100 colones are given in exchange to any single person or firm. Several mercantile and other houses were issuing a form of coupon because of the impossibility to make change, so this issue of copper coin is very welcome and no inquiry is being made as to what security is behind it. The coin is being made and issued as rapidly as possible.

GUATEMALA.

Stock of money in the country on Dec. 31, 1917.

[Stated in United States money.]

Character of stock.	In banks.	In circulation.	Total used for monetary purposes.
Silver coin.....			
Notes of bank of issue.....	\$610,000	\$890,000	\$1,500,000
	254,000	221,500	475,500
Total.....	864,000	1,111,500	1,975,500

There is no legal gold coin in existence and very little foreign coin. The small amount of United States gold coin to be found in the country sells at a premium of about 20 to 25 per cent above United States paper. The Government has not coined any silver for a number of years past. The silver pesos, which are just now rapidly disappearing from circulation, are mostly Peruvian, with a few Salvadorean and Guatemalan, while the smaller coins are nearly all of Guatemalan and Nicaraguan issue, although other countries, including Honduras, are represented to a very small extent.

Export of gold and silver during the year ended Dec. 31, 1917

PANAMA.**LAWS AFFECTING THE CURRENCY.**

The laws affecting the coinage, currency, and banking of the country in 1917 are law No. 3 of 1916 and laws Nos. 7, 38, and 58, respectively, of 1917, which are to be found in the Book of National Laws of 1916-17, pages 5, 88, 143, and 233.

The minor silver coinage executed in the United States for Panama during the year ended December 31, 1917, was 25,000 balboas (\$25,000 United States money).

The silver coinage withdrawn from monetary use during the calendar year 1917 was 976,000 balboas (\$976,000 United States money).

The production of gold from placer mining during the year 1917 was 325 ounces valued at 6,250 balboas (\$6,250 United States money).

The stock of national silver coinage used for monetary purposes on December 31, 1917, was \$12,550 in government treasuries and \$950,000 in circulation. The amount held in banks is unknown. United States gold, silver, and notes abound.

The import of silver coin from the United States during the year 1917 was \$150.

The export of silver coin to the United States during the same period was \$400,000; that of gold ore, also to the United States, was \$6,108.

Total.....	25,853,245	24,943,211	336,900	325,041

¹ Country not designated.

The amount of gold brought into the Argentine in 1916 is valued at P25,853,245 (\$24,943,211), while exports of gold were authorized for P336,900 (\$325,041); nevertheless the visible balance on December 31, 1916, does not show this increase. The amount in the caja de conversion, as above stated, amounted to P316,835,325.90 (\$305,682,722), while bank deposits show P33,344,458 (\$32,170,733), or a total of P350,179,783.90 (\$337,853,455). As the total for 1915 was P332,557,899.10 (\$320,851,861), the net gain amounts to P17,621,884.80 (\$17,001,594).

There were no imports of silver during the year 1916.

PRODUCTION OF GOLD AND SILVER DURING THE YEAR ENDED DECEMBER 31, 1916.

The Director of the Mines states that the gold mined in Argentina is in copper veins, quartz veins, and in alluvial deposits. As to the amount taken out annually the office has no record. The auriferous deposits are commonly worked and no previous license is needed for that purpose. In any event the amount is probably very small.

Referring to silver, the director states that if there was any mined in 1916, through extraction from lead workings, the amount was not known to his office.

The following approximate amounts of the finer metals were shipped out of the country as mineral along with shipments of the base metals—copper and lead:

Gold, 738.530 ounces, value \$15,266.77; silver, 21,349.24 ounces.

CURRENCY SITUATION (ROSARIO).

[In supplement to Commerce Reports, May 18, 1918.]

The currency situation remained substantially the same throughout 1917 as for several years past. The actual coin circulation consists only of subsidiary silver of 20, 10, and 5 centavos. The paper circulation of the country has increased from 823,000,000 pesos (peso=\$0.9648) in 1913 to 1,013,000,000 pesos at the close of 1917, while the gold guaranty has increased in the same time from 263,000,000 to some 326,000,000 pesos. As the value of the paper peso is fixed at 44 per cent of the gold peso, the guaranty represents about 73 per cent of the paper outstanding. The increase of paper money in the last four years has gravitated into the hands of the banks; in fact, the results show that while in 1913 there was some 388,000,000 pesos of paper money in the hands of the public, at the end of 1917 the public held only 343,600,000 pesos. At the same time the banks increased their holdings from 435,000,000 pesos to 669,500,000 pesos. This is believed to indicate a rather thorough state of liquidation of private debts and a depressed state of private enterprise. The per capita circulation of paper money when reduced to its actual gold value does not indicate inflation.

BOLIVIA.**BOLIVIA TO COIN NICKEL CURRENCY.**

[From Commerce Report, Feb. 26, 1918.]

Commercial Attaché William F. Montavon reports that the Bolivian National Congress has authorized the coinage of nickel money in denominations of 5 and 10 centavos (about 1.95 and 3.89 cents, respectively) to the amount of 1,000,000 bolivianos (\$389,300). The new coins will be in all respects similar to the nickel coins now in circulation in Bolivia. (1 boliviano =\$0.3893.)

EXPORTS OF GOLD AND SILVER.

[From Bulletin of the Pan American Union, February, 1917.]

The General Customs Bureau of the Bolivian Government has published statistics showing that the exports of gold from Bolivia in 1915 amounted to 178 kilograms, as compared with 180 kilograms in 1914.

According to official data, the exports of gold and silver ores from Bolivia during the five years from 1911 to 1915, inclusive, were valued in bolivianos, as follows:

Gold ores, 4,987,831 bolivianos (in United States, \$1,941,763).

Silver ores, 19,049,576 bolivianos (in United States, \$7,416,000).

[From The Mining Journal, London, Oct. 27, 1917.]

The export of silver (in 1916) was valued at 4,500,000 bolivianos (\$1,751,850), against 2,900,000 bolivianos (\$1,128,970), in 1915.

BRAZIL.

There were coined during the year ended December 31, 1917, 2,269 20-milreis gold pieces, or 45,380 milreis (\$24,791 in United States.)

There were withdrawn from monetary use during the year ended December 31, 1917, 546 British sovereigns and 8 half-sovereigns (\$2,676 in United States).

There was returned from the industrial arts (old plate) to monetary use 58 ounces of gold.

United States gold coin imported during the year ended December 31, 1917, was \$12,205.

Approximate stock of gold, also of paper money, used for monetary purposes on Dec. 31, 1917.

¹ Ounces.**BRAZILIAN GOVERNMENT ACQUIRES GOLD MINES' OUTPUT.**

[Ambassador Edwin V. Morgan, Rio de Janeiro, Jan. 21.]

[In Commerce Reports, Mar. 6, 1918.]

The Brazilian Minister of Finance has recently signed a contract with the São João d'El Rey Gold Mining Co. and the Ouro Preto Gold Mining Co., both of them British corporations, by which the Government will acquire henceforth the whole production of the mines of which these companies are the owners. This contract is the corollary of the Government's recent prohibition of the exportation of gold and other precious metals.

Regarding this arrangement the Jornal de Commercio published on January 18 a report from the Director of Commercial Statistics, in which appear the following statements:

"The exports of Brazilian gold during the last four years have been as follows: 1914, 4,377,893 grams; 1915, 4,564,523 grams; 1916, 4,050,824 grams; 1917, 4,368,770 grams. All the gold was exported through the port of Rio de Janeiro. Up to the end of the year 1916 all the gold went to Great Britain, but in 1917, 2,100,873 grams were sent to Great Britain and 2,267,897 grams to the United States. The final destination of the gold shipped to the United States was Canada, where it was deposited as a reserve fund.

"The exports of native silver for the same period were: 1914, 2,385,214 grams; 1915, 726,456 grams; 1916, 679,058 grams; 1917, 552,048 grams. Rio de Janeiro was the only port of shipment. In the year 1917 the United States received for transshipment to Canada 323,582 grams and the balance was imported by England."

CHILE.

IMPORTS AND EXPORTS.

[From Bulletin of the Pan American Union, April, 1918.]

The Bureau of Statistics of the Government of Chile publishes data showing that the imports of gold and silver coin in 1914 represented a value of 3,686,884 gold pesos (in United States, \$1,345,713); in 1915, 1,035,724 (in United States, \$378,039); in 1916, 30,543 (in United States, \$11,148); and in 1917, 16,446,805 gold pesos (in United States, \$6,003,084).

The exports of gold and silver coin, in gold pesos, during the periods referred to were as follows: In 1914, 14,671 gold pesos (in United States, \$5,355); in 1915, 40,357 (in United States, \$14,730); and in 1917, 522,507 (in United States, \$190,715). The transport *Rancagua* is said to have recently brought into the country coins valued at 6,500,000 gold pesos (in United States, \$2,373,000). Including this sum and taking into account the amount deposited in the Caja de Emission (Bank of Issue), it is estimated by said bureau that the stock of gold now in the country withdrawn from circulation amounts to 50,000,000 gold pesos (in United States, \$18,250,000).

COLOMBIA.

WITHDRAWAL OF OLD COINS IN COLOMBIA.

[From Daily Consular and Trade Report, June 2, 1917.]

The president of Colombia designated May 1, 1917, as the date for beginning the withdrawal from circulation of the old silver coins, in accordance with the general terms of the coinage law promulgated in December, 1916 (see Commerce Reports for Feb. 27, 1917). The old coins will be exchanged for other Colombian coins at the rate of \$2 silver for \$1 in English gold or other legal tender until May 1, 1918.

NEW COINAGE LAW IN COLOMBIA.

[From Daily Consular and Trade Reports, Feb. 27, 1917.]

The Congress of Colombia has passed a coinage law, which was promulgated by the President in the Diario Oficial of December 19, 1916. The importance of this measure was set forth by the President in a special message to Congress in November, when the country's acute need of new money was forcibly presented. Under this law the Government will coin gold, silver, and nickel pieces, and will recoin old and foreign pieces, standardizing in value the money in use throughout the country. The Government is authorized to coin gold pieces of established weight and fineness in the mints of Bogotá and Medellín, when gold is needed in circulation and when individuals present gold for coinage, the work to be done at cost price. The Government will complete the mint at Bogotá, and will arrange with the departmental government of Antioquia for the purchase or lease of the mint at Medellín to be enlarged and put into shape to coin an adequate amount of money. An appropriation of \$50,000 annually for coinage purposes is to be included in the next budget and in succeeding budgets until the amount of \$200,000 is reached. The funds of the conversion board may be used in exchange for national silver pieces coined before 1911 and foreign silver coins now in circulation in Colombia.

SYSTEM OF EXCHANGING OLD COINS FOR NEW.

Old coins will not be withdrawn from circulation in all parts of the country at once, but the exchange will begin in certain sections on dates to be fixed by the Government on the recommendation of the conversion board. The President, in his message urging the passage of the coinage bill, emphasized the special need of new money in the Department of Nariño and the Intendencia of Chocó, where a crude local money system has prevailed and where special temporary rates of exchange are now authorized. When exchange is begun in any specified section of the country, the Government will take old money at the rate of \$200 silver for \$100 English gold or legal tender. Nickel coins issued in 1904 and later will be exchanged for new nickel pieces to be coined for the purpose, in the proportion of 1 cent gold for \$1 paper. On the expiration of the period fixed for the withdrawal of old coins, which shall not exceed three years in the case of silver pieces, only new coins shall be considered legal tender. In the meantime, the old coins shall be accepted at the rates specified for the official exchange. In the case of paper money, the conversion board will exchange gold notes for old and authorized issues of paper money, which are presented within a year from promulgation of this law, at the rate of \$1 in gold notes for \$100 of old paper.

DENOMINATIONS OF THE NEW COINS.

The Government of Colombia, through the conversion board, will arrange for the coinage of silver pieces up to the value of \$1,500,000 in denominations of 10 cents, 20 cents, and 50 cents, with the stamp, weight, and other conditions designated for this class of coins by existing laws, and in such proportions as may be required in effecting the exchange for old coins. The old silver coins turned into the conversion board shall be used for this coinage, and any excess shall be sold and the proceeds used in meeting the expense of the coinage. If a profit is available, \$50,000 shall be used in the completion of the southern highway in the Department of Nariño, \$20,000 for the roads from Quibdo to Bolivar and from Quibdo to Istmina, and the rest shall be assigned to general public funds. The new nickel pieces which are to take the place of the old ones when the resources of the conversion board permit are to be in denominations of 1 cent, 2 cents, and 5 cents, and will reach a total value of \$1,200,000. The funds which the silver coinage law of 1914 authorized the executive to take from the treasury of the conversion board are to be repaid by the National Treasury as soon as this is possible, in order that a fund may be available for the conversion of the paper money. The time limit designated by that law for the amortization of the customs and salt-works warrants, amounting to \$750,000 covering a loan from the conversion board to the Government, is extended to December 31, 1918.

CIRCULATING MEDIUM.

[Extract from the Economist, Feb. 16, 1918.]

English sovereigns are legal tender in the Republic, against \$5 Colombian. According to an executive decree passed last year, the national silver coin minted before 1911 and foreign silver coins which have hitherto legally circulated in the Republic will cease to be legal after April 30, 1918. Meantime they may be exchanged for Colombian or English gold. At present the control of the currency is in the hands of a board, the principal duty of which is to accumulate a conversion fund as guarantee for the paper money. Some two years ago the circulating medium was estimated to be composed of \$6,441,300 in gold, \$7,004,700 in silver, and \$10,056,300 in paper (not face value, but gold equivalent), and about \$997,700 in nickel, or a total of \$24,500,000, which worked out at about \$4.83 per capita of the population.

[From Bulletin of the Pan American Union, March 1918.]

According to the balance sheet, which the conversion board of Bogota has just published, the value of the gold currency placed in circulation from March 1, 1916, to December 31, 1917, aggregated \$9,000,000. It is proposed to add to this circulation from time to time, should it be thought necessary, an additional amount, not exceeding \$10,200,000.

GOLD PRODUCTION.

[From Bulletin of the Pan American Union, June, 1918.]

The output of gold from the Choco mining region had a value of \$125,000, gold, in 1915; \$120,000 in 1916, and \$150,000 in 1917. The value of gold and platinum mined in El Choco from 1654 to 1917 amounted to \$211,732.110, gold. It is estimated that if the value of gold and platinum produced in the Department of Antioquia during the period referred to were added to the sum mentioned the value would be doubled.

EXCHANGE OF SILVER COIN.

[From Bulletin of the Pan American Union, July, 1918.]

The date fixed for the exchange of national silver coins, minted before 1911, and foreign silver coins circulating in the Republic, has been extended to December 31, 1918.

PARAGUAY.

Stock of gold, silver, and paper money used for monetary purposes on Dec. 31, 1917.

United States equivalent.....	\$13, 208, 344	\$63, 133, 888	\$44, 257, 768	\$120, 600, 000

The Argentine gold peso is the actual legal monetary unit of Paraguay (law of July 14, 1885). Paraguay also has a depreciated paper currency, of which the total issue amounts to 125,000,000 paper pesos. This paper currency may be redeemed at the Oficina de Cambio, a Government institution, at the rate fixed by the ministry of finance; but redemption up to the present time lies within the discretion of that office. For purpose of redemption, the Oficina de Cambio had the sum of 1,010,016 Argentine gold pesos (\$974,460) on December 31, 1917.

By the law of September 29, 1917, No. 263, the ministry of finance is authorized to fix the rate of exchange between Argentine gold and Paraguayan paper for Government collections, and the rate established is based upon the actual commercial or "street" rate.

The executive power is authorized to prescribe whether customs duties shall be collected in Argentine gold or in Paraguayan paper, at a rate of conversion fixed from time to time by the ministry of finance. Internal taxes are collected in Paraguayan paper.

[From the Numismatist, February, 1918.]

There is practically no domestic coin in circulation in Paraguay. No coinage of valuable metals has taken place there in many years, and no recent coinage of base metals. Paraguayan money has so depreciated in value that the commercial worth of the fractional coins exceed their monetary value, and, accordingly, in times past many of them have been sold for junk.

PREMIUM ON GOLD.

Highest, 38.40 (Mar. 2, 3, 4); lowest, 31.27 (Jan. 3); average, 33.98.

Imports of gold coin during the year ended December 31, 1917; 887,621 pesos (\$856,377); no data available as to countries from which imported; imports from the United States exceeded the exports.

PERU.**COINAGE.**

[From Bulletin of the Pan American Union, November, 1917.]

According to a report of the Treasury Department of the Government of Peru, there were minted in Lima, from April 11, 1898—the date on which pounds were first coined in the Republic—to June 30, 1917, gold coins to the number of 3,603,158, representing a value of £ P. 3,008,374 (in United States \$14,640,252), of which £ P. 582,477 (in United States \$2,834,624) were struck in 1916 and £ P. 643,533 (in United States \$3,131,753) during the first half of 1917.

From June 30, 1902, to the same date of 1917 the imports of gold coin were valued at £ P. 4,173,328 (in United States \$20,309,501).

From August, 1914, to June, 1917, the gold coined in Peru represented a value of 5,106,163 soles (in United States \$2,484,659). (1 sol is equal to \$0.4866.)

PRODUCTION OF GOLD AND SILVER, 1917.

[From Bulletin of the Pan American Union, April, 1918.]

The gold and silver production in Peru in 1917 was as follows:

	Kilograms.		Kilograms.
Gold (dust).....	949	Metallic silver.....	3, 986
Gold ore	15, 460	Silver concentrates.....	351, 600
Silver ore.....	884, 366	Silver precipitates.....	5, 167

PRODUCTION OF GOLD AND SILVER, 1916.

[From the Mining Journal, London, May 11, 1918.]

[Review of official report.]

* * * * *

Peru has always been closely identified with silver, and with the great advance which we have witnessed in prices the recovery in output observable in recent years is bound to extend. In 1916 the return was 335,529 kilograms, compared with 294,425 kilograms, placing her fourth among the world's producers in 1916. The relative figures are as follows: United States, 2,267 tonnes; Mexico, 1,244 tonnes; Canada, 799 tonnes; Peru, 336 tonnes; Australia, 280 tonnes; Japan, 172 tonnes; Spain, 140 tonnes; Bolivia, 109 tonnes.

The production of gold benefited largely by the increased activity of copper smelting. The output for the year amounted to 1,907 kilograms, compared with 1,690 kilograms in 1915. The Cerro de Pasco smelter contributed 912 kilograms. The largest individual gold mine is the Cotabambas Auraria, in the Department of Apurimac, which returned 262 kilograms. The New Chuquitambo gold mines returned 92 kilograms. The Province of Sandia, in the Department of Puno, has a number of alluvials worked by the natives, from which 242 kilograms of gold were collected.

CIRCULATING MEDIUM.

[Extract from the Economist, Feb. 16, 1918.]

The influx of gold into Peru has been so steady and ample of late that the metal at the close of last year had increased from £ P. 713,996 on December 31, 1916, to over £ P. 1,000,000 up to October 31, 1917. It has to be remembered that previous to the war the gold standard had been in full force in the Republic from 1898.

With the introduction of a new gold certificate law there will have been three distinct paper currency issues authorized since the commencement of the State's financial difficulties, caused primarily by the war. These are: (a) 1914 bank note issue, of which £ P. 2,468,874 was in circulation on June 30 last; actual gold guaranty more than 50 per cent. (Object of issue, to afford currency substitute occasioned by the hoarding of gold following outbreak of war.) (b) Gold certificate issue of £ P. 500,000 authorized in August, 1917, with full gold guaranty. (Object of issue, to afford currency substitute necessitated by disappearance of silver from circulation brought about by the rise in the price of the white metal.) (c) Gold certificate issue of £ P. 4,000,000, with full gold guaranty. (Object of issue, to afford currency substitute necessitated by the United States Government, and previous action of other allied

governments, in embargoing further shipments to Peru and other foreign countries.) It is abundantly clear that, for the first time for many years the currency system of Peru is in quite a healthy condition, as much owing to wise and prudent legislation, perhaps, as to the advantages derived from the war raging in Europe.

PERUVIAN CURRENCY SITUATION.

[Henry Wasserman, jr., clerk to commercial attaché, Lima, Aug. 10.]

[In Daily Consular and Commerce Reports, Oct. 12, 1917.]

On August 8 both chambers of the Peruvian Congress approved a bill designed to relieve the pressing monetary situation of the country. The new law authorizes the Junta de Vigilancia, a body representing the Ministry of Finance and having control over the issuance of the national currency, to issue 5,000,000 soles (approximately \$2,500,000) in gold certificates of the denomination of one-tenth of a pound (\$0.50 at present exchange) and subsidiary coins of nickel of denominations of 20, 10, and 5 centavos (\$0.10, \$0.05, and \$0.025) to the amount of 500,000 soles (\$250,000). By an amendment adopted August 9, 1917, this amount was increased to 1,000,000 soles (\$500,000).

Hitherto the money in circulation has consisted of paper bills known as "cheques circulares," or circulating checks, in denominations of half pound, pound, 5 pounds, and 10 pounds; silver pieces of 5, 10, 20, and 50 centavos, and 1 sol; and gold 1-pound coins. The high price of bullion and bar silver has caused the gradual withdrawal from circulation in Peru of almost all the silver coin, with the result that transactions involving small sums were made difficult and in many instances were impossible. Printed notices have been hung these last few days in many shops, announcing that no change will be made for paper or gold unless goods to the amount of at least 3 soles are bought.

ISSUANCE OF PAPER CURRENCY.

The outbreak of the world war made itself felt in Peru by the disappearance of gold from commercial transactions and the rise in price, and consequent scarcity of silver. It was this situation that brought about the issuance of the present paper currency, known as "cheques circulares," by legislation enacted in August and October of 1914. In addition to the authorized denominations, the issuance of a smaller check, equal in value to a sol, was discussed but rejected.

Coincident with the circulation of the new paper currency came a rise in the value of silver. A law passed in December, 1915, authorized the monthly coinage of silver in denominations of 5, 10, 20, and 50 centavos and 1 sol to the amount of 200,000 soles monthly and brought about a temporary change for the better. Meanwhile the "cheque circular" had strengthened its prestige and gold had returned to circulation, but lately the silver crisis has reappeared. Plenty of gold or paper is to be had, but silver is so scarce that travelers on their way to southern Peru have had to pay a premium of 2 to 5 per cent, and in some cases more, to change gold or paper for silver for use in Arequipa and the surrounding district, where the situation is worse than in Lima.

What the business public has urged during the past several weeks, as it did a year ago, is the issuance of a small paper bill, equal to one-tenth of a pound, and the coinage of nickel money, which has finally been adopted.

NICKEL COINS.

From August, 1914, to June 30, 1917, there had been turned out at the mint 5,106,163 soles, of which 3,106,163 were coined in accordance with the legislation of December, 1915. Each sol weighs 25 grams and contains 22.5 grams of fine silver. In the Peruvian monetary system each sol's value is 24 pence (\$0.48); but the actual market value of the silver content has reached 42 pence per ounce troy weight, making the intrinsic value of the coin higher than its money value.

The laws of August, 1917, authorize the coining in the United States, and issue by the Peruvian Government, of nickel coins to the value of 500,000 soles in denominations of 20 centavos, 300,000 soles in denominations of 10 centavos, and 200,000 soles in denominations of 5 centavos. The 5-centavo pieces are to be 75 per cent copper and 25 per cent nickel; the other coins are to be pure nickel. The 5-centavo pieces are to be legal tender to the amount of 1 sol. The Government will deposit with the Junta de Vigilancia gold equal to the amount of nickel money coined, to constitute a special fund for exchanging nickel coins for silver coins. This will be done, however, only when the London quotation for the troy ounce of standard silver shall have been maintained at less than 30 pence (\$0.60) for a period of at least six months.

"CHEQUES CIRCULARES."

The "cheques circulares," of denominations already named, are issued in accordance with the laws of August 22 and October 1, 1914, by the following banks: Peru y Londres, Italiano, Internacional del Peru, Popular del Peru, Aleman, Transatlantico, and Caja de Ahorros (Savings Bank).

The main provisions of the enactment of August 22 authorize the above-mentioned institutions to issue "cheques circulares," payable to bearer, of the denominations of 1, 5, and 10 pounds. Each bank must have in its vaults gold equal in amount to 35 per cent of its particular issue, and securities, consisting of mortgage bonds, commercial paper, and Government bonds, equal to at least 65 per cent of the bank's issue. These securities were to be subject to acceptance at the discretion of the Junta de Vigilancia—a board composed of two members chosen by the National Legislature, a delegate of the Government, and a representative of the Lima Chamber of Commerce, none of whom could be a director or agent of any of the issuing banks, and who were to supervise the issue. The "cheques circulares" have a first lien on these securities.

The issue was to be gradual, according to the needs of the banks, and in proportion to the gold and security guaranty. Their retirement is to take place six months after the conclusion of the present war. The banks, upon their first issue, were to make the Government a loan of £p. 100,000, each institution participating in proportion to its check emission, payment of this loan to be effected by the tobacco taxes in a manner agreed upon between the issuing banks and the Government, with annual interest at the rate of 7 per cent and amortization of 3 per cent.

PROVISIONS OF THE SECOND LAW.

The second law modified the first. The limit of the issue by all the banks was increased by £p. 1,100,000. Twenty per cent of the issue was to be guaranteed by gold coin, for which was to be made available those gold deposits which the banks had in the National City Bank of New York. These funds were to be placed at the order of the Junta, and no necessity would exist for their transference to Lima. Thirty per cent of the issue was to be guaranteed in mortgage cedulas, at their face value, or in mortgage bonds accepted at 75 per cent of their face value; by the real estate, rural or urban, belonging to the banks and located within the Republic, at 75 per cent of appraised value; and various other commercial securities, at the discretion of the Junta de Vigilancia.

On conversion of the checks the balance of the debt was to be guaranteed by 20 per cent of the annual net revenue on tobacco.

EXCHANGE OF PERUVIAN PAPER MONEY.

[Commercial Attaché Wm. F. Montavon, Lima.]

[In Commerce Reports, Apr. 8, 1918.]

The Peruvian Congress recently passed a supplementary clause in the monetary bill authorizing the Junta de Vigilancia (Monetary Commission of the Treasury Department) to exchange in its offices throughout Peru worn-out fractional paper money, the new paper used in the redemption of old bills not to be included in the issue authorized in the original law.

The issue of fractional paper money was brought about by the opening of the European War in 1914. Due to the rapid increase in the price of silver thereafter, it was found that all silver coins were rapidly being withdrawn from business transactions in the coast cities of Peru, although in the Sierra the Indian population always insisted on fractional silver coins and a large supply was kept there. At this time there were over 5,000,000 soles (\$2,230,000) of fractional silver coins in circulation in Peru, but the situation soon became so serious that in August, 1917, Congress authorized the Junta de Vigilancia to print and issue up to 5,000,000 soles in bills of 50 centavos (\$.0243) denomination, and up to 500,000 soles in bills of 5 centavos (\$.0024), to relieve the very pressing need of fractional exchange for small business transactions.

SILVER COINAGE LAW IN PERU.

[From the Numismatist, March, 1916.]

On December 14 the President of Peru promulgated the silver coinage bill which had passed both Houses of Congress at the first extra session. The chief provisions of the new law, as published in a recent number of the West Coast Leader, are as follows: Silver is to be coined at the rate of 200,000 soles (\$97,330) monthly, in pieces of 1 sol (\$.0486), one-half, one-fifth, one-tenth, and one-twentieth sol; silver will be

coined temporarily for private parties at a fee only sufficient to cover the cost of coinage, the parties availing themselves of this privilege being required to deliver 50 per cent of their newly coined silver to the national treasury in exchange for bank notes; the silver deposits in banks in Lima and Callao are to be reduced to 3 per cent of the fiduciary currency on hand, the surplus silver to be exchanged for bank notes; speculation in silver is prohibited under penalty to both parties involved in such speculation; the circulation of private currency or "vales" in place of silver is prohibited, and a period of 90 days is fixed for the withdrawal from circulation of the private currency now in use. The purpose of the new law is to remedy the difficulties created by the scarcity of silver currency.

SILVER DISKS FOR PERUVIAN MINT.

[From the Numismatist, June, 1916.]

Silver disks manufactured in the United States will be received at the national mint of Peru from individuals holding Government permits and will be coined into pieces valued at 1 sol (\$0.486) each up to the amount of 500,000 soles (\$243,325). In conformity with this ruling, published in El Peruano for February 11, the Peruvian mint will collect a coinage charge of 2 per thousand on the value coined. The disks or coin blanks shipped from the United States will be exempt from consular invoice fees and customs duties.

URUGUAY.

URUGUAY TO RECOIN SILVER.

[From the Numismatist, April, 1916.]

A law authorizing the National Bank of Uruguay to recoin old silver pieces to the value of 5,000,000 pesos (\$5,170,000) was promulgated January 10, 1916, in the Diario Oficial. The new coins will be of 1 peso and half peso, and the bank is authorized to coin smaller denominations also if it considers this necessary. Silver pieces of the coinages of 1877, 1893, and 1895 are to be retired from circulation within three months, and at the end of this period they will no longer be considered legal tender, though they will be accepted in exchange for new coins for three months more.

[From Bulletin of the Pan American Union, February, 1917.]

The new silver coins, amounting to 5,000,000 pesos¹ (in United States \$5,171,000), minted in Buenos Aires in accordance with the law of January 3, 1916, in denominations of 1 peso and 50 centavos, will soon be put in circulation.

BULGARIA.

NOTES IN CIRCULATION AND GOLD RESERVE.

According to an article appearing in the March, 1917, issue of the London Banker's Magazine, the bank-note circulation in Bulgaria increased from 321,000,000 leva (\$61,953,000) in 1915 to 800,000,000 leva (\$154,400,000) early in 1917. The gold reserve of the National Bank was 64,219,000 leva (\$12,394,267).

ROUMANIAN, SERBIAN, AND GREEK MONEY IN BULGARIA.

[From the Numismatist, March, 1918.]

The ministry of finance has prohibited the circulation in Bulgaria and the occupied territories of Roumanian, Serbian, and Greek bank notes, as well as the silver and nickel money of those countries. All persons and institutions having such money were obliged to declare them to the National Bank of Bulgaria before December 1, 1917. If such moneys are found in the possession of any one after that date, a suit will be instituted against such person and the money confiscated. All persons who had such money in quantities were allowed to export it out of the country within the time limit stated above, provided they petitioned the customs division of the ministry of finance.

LAWS AFFECTING THE CURRENCY.

By decree of February 22, 1917, the treasury departments of Sweden, of Norway, and of Denmark were authorized to execute on and for their own account iron coinage to be legal tender at its face value to the amount of 1 krone, in the three countries, regardless of where struck, as long as the coin is not damaged in any way.

The iron coinage shall comply with the following specifications:

Denomination.	Diameter (millimeters).	Number of pieces to the kilogram.	United States equivalent.
5 öre.....	27	144	\$0.0134
2 öre.....	21	288	.0054
1 öre.....	16	576	.0027

IRON COINS IN SCANDINAVIA.

[From the Numismatist, February, 1918.]

An agreement was concluded in February between Sweden, Norway, and Denmark, supplementing their coinage covenant so as to make the minting of subsidiary iron coins for these countries possible.

The director of the mint at Stockholm, Sweden, has supplied the Riksbank and the general public with 1-öre iron coins to the amount of 7,000 kroner, which were immediately distributed in the market in small lots, generally to the amount of 3 or 4 kroner to each individual party. The 2 and 5 öre pieces are expected to soon follow.

The diameter of the coins is as follows: 5 öre, 27 millimeters; 2 öre, 21 millimeters; and 1 öre, 16 millimeters. From 1 kilogram of iron 144 5-öre pieces and 576 1-öre pieces will be struck.

Norway.—Obv., "Kongeriket Norge"; in center, separated by circle, crowned monogram "H 7." Rev., "5 Öre 1917" in three lines. Trefoils on both sides of "5" and below "1917"; 19 and 17 separated by crossed hammers.

"In the Danish Rigsdag recently the secretary of finance gave the information that for the present only 150,000 kroner worth of 5-öre pieces would be coined, 75,000 kroner in 2-öre pieces, and 30,000 kroner in 1-öre pieces."

[From the Numismatist, May, 1918.]

At the close of the year 1917 the Swedish mint had struck 265,232 kroner in iron coins out of the 350,000 kroner authorized. As the need for subsidiary coins is still great, the mint has requested authority to continue to strike iron coins of the most needed denominations to the amount of 500,000 kroner.

GOLD HOLDINGS OF NATIONAL BANK OF DENMARK.

[In Daily Consular and Commerce Reports, Aug. 7, 1917.]

The report of the Danish National Bank, the organization that has the sole right to issue the money in circulation, shows, on July 1, 1917, gold on hand to the amount of 197,300,000 crowns (\$52,876,400). This is the record and is the largest amount of the precious metal ever held by the bank. It is an indication of the great prosperity of the Kingdom.

FRANCE.

METALLIC RESERVES.

[From Bulletin de Statistique, April, 1918.]

As a whole, the metallic reserves show a further increase.

Total coin and bullion reserve:	Francs.
Dec. 23, 1916.....	5,379,000,000
Dec. 22, 1917.....	5,597,408,000
Net gain.....	218,400,000

Gold reserve:

	Francs.
Dec. 23, 1916.....	5, 082, 300, 000
Dec. 22, 1917.....	5, 350, 200, 000
Net gain.....	267, 900, 000

Silver reserve:

Dec. 23, 1916.....	296, 700, 000
Dec. 22, 1917.....	247, 200, 000
Net loss.....	49, 500, 000

Regarding the gold reserve, the total gain was in reality 288 millions of francs, 20 millions of which were paid out.

As was the case last year, the increase shown during the year 1917 is due exclusively to loans by the French people. These loans would have raised the reserve to 6,427 millions of francs if we had not had to pay abroad, since the beginning of the war, 1,077 millions of francs.

It must be remembered that most of this gold (about 900 millions of francs) went to England as the result of an agreement between the French Government and the British Government. In exchange therefor France received, in London, credits considerably in excess of the value of the gold sent.

To these shipments must be added gold loans made to the Bank of England as well as to the British Government, in consideration of credits extended to the French Government. These loans amount to 1,955 millions of francs, of which 435 millions was shipped during the year 1917. They are to be returned after the war, and appear on our statements opposite "Gold abroad," together with the free deposits we have, especially in Russia and the United States.

We have sent no gold abroad since the entrance of the United States into the European war assured the allies of the cooperation of the American Treasury.

On December 22, 1917, our gold reserves were as follows:

	Francs.
Gold in vaults.....	3, 313, 100, 000
Gold abroad.....	2, 037, 100, 000
Total gold reserves.....	5, 350, 200, 000

MONETARY LEGISLATION.

[From Forty-sixth Annual Report of the Deputy Master and Comptroller of the Mint, London, 1915.]

A decree of June 11, 1915, permitted the striking of 10 and 5 centime pieces in bronze, the state of war making it impossible to proceed with the manufacture of the pure nickel coins of these denominations authorized by the decrees of August 4, 1913, and July 10, 1914. A decree of April 1, 1915, prohibited the export of coins of nickel, copper, or mixed metal, except by permission of the minister of finance. A decree of May 1 authorized the governors of French colonies and protectorates other than Tunis and Morocco to prohibit, if considered expedient, the export, in any form, of gold except by the Bank of France. A decree of July 10, 1915, prohibited the export of gold from French colonies and protectorates other than Tunis and Morocco except with the permission of the minister of the colonies. A decree of August 25, 1915, prohibited the reexportation of silver coins except by permission of the minister of finance. A decree of September 3, 1915, prohibited the reexportation of silver coins from the French colonies and protectorates other than Tunis and Morocco except by permission of the minister of the colonies.

Gold coins amounting in nominal value to 154,020 francs (\$29,725.86) were melted in 1915. Of the silver coinage made in 1915, 30,893,887 1-franc pieces (\$596,252) were manufactured from metal resulting from the remelting of 5-franc pieces.

LAW OF AUGUST 2, 1917, ON THE EXECUTION OF COINAGE FROM BRONZE AND NICKEL BARS.

[Bulletin de Statistique, August, 1917, p. 168.]

By exception and annulling the provisions contained in article 3 of the law of August 4, 1913, the minister of finance is authorized to issue the maximum amount of 15 million francs of bronze and nickel coins with a round hole in the center, having the following characteristics:

Denomination.	Diam-eter (milli-meters).	Diam-eter of the hole in the center (milli-meters).	Composition.		Weight.	
			Ingredients (per cent).	Tolerance above and below (thou-sandths).	Stand-ard grams.	Tolerance above and below (thou-sandths).
25 centimes.....	24	5.5	25 nickel..... 75 copper.....	10	5	10
10 centimes.....	21	5.0		10	4	15
5 centimes.....	19	4.5		10	3	15

[Bulletin de Statistique, September, 1917, p. 494.]

By decree of September 10, 1917, the maximum amount of notes issued by the Bank of France and its branches, temporarily fixed at 21 billions, by the decree of February 15, 1917, was raised to 24 billions of francs.

[Bulletin de Statistique, October, 1917, p. 590.]

By decree of October 12, 1917, the limit of note issues by the Bank of Algeria and its branches was raised to 650 millions of francs.

Table of French, colonial, and foreign coinage executed by the French mint, by years, since 1880.

[From Bulletin de Statistique, November, 1917.]

Years.	Weight in thou-sands of kilos.	Number in mil-lions of pieces.	Value in millions of francs.	Years.	Weight in thou-sands of kilos.	Number in mil-lions of pieces.	Value in millions of francs.

1898.....	639.0	97.9	269.2				

NOTE.—In 1915 and 1916 no gold.

FRENCH CITIES USING CARD MONEY.

[From The Numismatist, March, 1916.]

The extraordinary demand for copper and nickel throughout Europe for other purposes than coinage, with the resultant dearth of small coins, has created conditions similar to those in our own country during the Civil War, and these conditions are being met in very much the same way that our merchants met them. Paper money for small amounts has been issued in practically all the countries affected by the war. Postage stamps, minus the metal casings, have been in use for several weeks in Russia. And now pasteboard money, very similar to our "card money" of the Civil War period, is being used in France, according to a press dispatch from Paris, which says:

"Pasteboard sous and pieces representing denominations up to 5 francs are being used in some of the occupied cities, owing to the scarcity of small change. The pasteboards are of many different colors and shapes—square, round, octagonal, oval, and diamond shaped. At Roubaix, Tourcoing, Rancy, and Croix the money is guaranteed by the municipality and good only for use in transactions with merchants of the town where the money is issued. At Lille the pasteboard sous were issued by the Bank of Lille. The city of Valenciennes issues a new denomination of small change in the form of a 4-sou piece (20 centimes), guaranteed by the communes of the arrondissement and redeemable four months after the conclusion of peace."

GERMANY.

MONETARY LEGISLATION.

By law of February 8, 1917, the German Government prohibited the payment of any premium on gold.

The Bulletin de Statistique, December, 1917, page 1156, quotes a German ordinance of May 10, 1917, prohibiting the melting of silver coins for industrial purposes without license. Articles proved to have been made from melted coins may be confiscated. The imperial chancellor is authorized to fix the maximum prices of silver articles. He can regulate the market of silver and silver articles, order an inventory taken, or order seizure and expropriation.

GERMAN ORDINANCE OF JUNE 19, 1917, GOVERNING THE PRICE OF SILVER.

[Bulletin de Statistique, December, 1917, p. 1161.]

In view of article 2 of the ordinance of May 10, 1917, prohibiting the melting of silver coins for industrial purposes, it is hereby ordered that:

ARTICLE 1. The price of a kilogram of fine silver, in its crude state, shall not exceed 175 marks (equivalent to \$1.296+ per fine ounce).

The price is payable in cash upon delivery, and does not include the express charges from the storehouse. When the payment is deferred, interest may be added thereto, calculated at the rate of discount of the Imperial Bank plus a maximum charge of 2 per cent.

ART. 2. The price fixed by article 1 is a maximum price within the terms of the law on maximum prices, August 4, 1914, modified by the ordinances of December 17, 1914, January 21, 1915, March 23, 1916, and March 22, 1917.

ART. 3. The raw and intermediary products, such as minerals, sweepings, silver containing gold, and refining products, shall not be sold at a price higher than that fixed by article 1, minus a reduction, according to the inferiority of the product. Articles made wholly or in part of silver, and whose nature is such that they are used for secondary industrial purposes (semimanufactured products), shall not be sold at a price higher than that fixed by article 1 for raw materials, plus an allowance for refining, melting, alloy, and general charges. The allowance shall not include an excessive profit, in view of the general circumstances, and especially in view of the refining charges, the possibilities of utilization, and the conditions of the market.

ART. 4. The office of prices of metallic products, at Berlin, can, at the request of a party concerned or of an authority, fix the fair price according to article 3. Its decision shall be final. The said decision is rendered free of charges and requires no stamp.

The office of prices is authorized to collect for the Empire such contracts as have been made for a price in excess of that established by the office.

ART. 6. Silver plated articles do not come under this ordinance.

ART. 7. The period of the present ordinance may be extended.

COINAGE OF MONEY IN GERMANY.

[From *L'Économiste Européen*, Paris, May 25, 1917.]

The total of German pieces struck up to the end of March, 1917, after deducting the retired pieces, is composed as follows:

Classification.	Values.	
	Marks.	United States dollars.
Gold coins.....	5, 155, 813, 320.00	1, 228, 114, 733
Silver coins.....	1, 270, 394, 355.00	302, 607, 935
Nickel coins.....	108, 047, 299.35	25, 736, 867
Iron coins.....	25, 965, 144.65	6, 184, 292
Copper coins.....	25, 106, 177.70	5, 980, 292
Aluminum coins.....	99, 901.73	23, 797
Total.....	6, 585, 426, 198.43	1, 568, 648, 521

The iron pieces in circulation in Germany have amounted to the following: In 10-pfennig pieces, 16,400,000 marks (in United States, \$3,906,480); in 5-pfennig pieces, 8,600,000 marks (in United States, \$2,048,520); being 1,000,000 marks more than was provided for upon their origin.

There has been struck 85,915.39 marks (United States, \$20,465) in aluminum coins of 1-pfennig, which carried that class of pieces in circulation to 99,901.73 marks (United States, \$23,797). They struck besides, 3,999 marks (United States, \$953) in silver pieces of 3 marks.

THE SCARCITY OF FRACTIONAL COINS.

[From *L'Économiste Européen*, Paris, Apr. 13, 1917.]

The hoarding of fractional coins is causing a great shortage all over the country, and the chambers of commerce are insistently appealing to the Government to take the necessary measures to stop this evil practice. Fractional silver coins, as well as nickel coins, have disappeared from circulation. This hoarding naturally affects also the new iron coinage, and complaints have been made to the Government by about a dozen of the leading cities in Germany.

The Imperial Government has tried in vain to remedy the difficulty. In 1916 there was issued 10,603,000 marks (\$2,525,635) worth of 50-pfennig silver coins, but they are gradually disappearing from circulation. There has been no nickel coinage since January, 1916, but there has been issued 116 millions 10-pfennig iron pieces and nearly as many 5-pfennig pieces. There are mutual societies in the country holding in their treasuries as much as 70,000 marks (\$16,674) worth of iron coins.¹

The ministers of the interior, commerce, and finance, in conference, have just decided upon the unlimited issue of "Gutscheine," or official municipal notes, of 50-pfennigs and higher denominations.

MINOR COINS VANISH FROM SIGHT IN GERMANY.

[From the *Numismatist*, May, 1917.]

German papers report a vexatious and almost mysterious disappearance of small coins, making it constantly necessary to issue new provisional iron money which must be "cashed in" after the war. The Government, since 1916, has coined and issued 10,603,000 marks' worth of silver 50-pfennig pieces, most of which have disappeared from sight almost as fast as put out. In addition it has put out 116,000,000 10-pfennig pieces and about as many 5-pfennig pieces made of iron, and even these are disappearing. Business firms are known in some cases to have as much as 70,000 marks' worth of iron money. The situation is to be relieved, it is reported, by a huge issue of "bons" for 50 pfennigs apiece, which will be put out by individual municipalities and taken up after the war. The shortage of small money, and its

¹ It is reported that the iron coins were at first issued with a black surface, consisting of oxide of iron, but are now coated with zinc as a protection against rust, and that their design varies slightly from that of the old coins.

retirement from circulation and into countless stockings, has been under way for more than two years. It began originally in the occupied portions of France, then spread to similar districts in Russia. Its first result was the issue of municipal paper money all over northern France, and the issue of military orders forbidding the natives to accept either French or German money, but to accept only town "bons."

RETIREMENT OF THE 2-MARK COINS IN GERMANY.

[From *L'Économiste Européen*, Paris, Aug. 3, 1917.]

By a decree the Bundesrath (Council of the German Confederacy) has decided that from January 1 next (1918) the 2-mark silver pieces shall not have further lawful currency. They will have to be exchanged before July 1, 1918, against the notes of the Bank of the Empire or notes of the bureau of loans.

WORLD'S SMALLEST PAPER MONEY.

[From the *Numismatist*, July, 1916.]

In the wake of the war there have been many novel substitutes for regular money, particularly with the Teutons, who have issued iron coins and muslin notes. Another novelty by them has been in what is probably the smallest value paper money ever issued. Notes of the value 1 pfennig and 1 heller (having a value about equivalent to one-fifth of a United States cent) have been issued by some local governments in Germany and Austria.

Among specimens received are: Quedlinberg, Germany, 1 pfennig and various higher denominations; Aschach, Austria, starts its series with 1 heller; and Manthausen, Austria, companion notes of the value of 1, 2, 10 and 20 heller, and 1 and 2 krone.

GOLD EXPORTS.

[From the *Australasian Insurance and Banking Record*, July 21, 1917.]

On 29th June it was cabled that, according to Amsterdam advices, £4,000,000 (United States, \$19,466,000) in gold has been sent by Germany to Holland to support the mark exchange, which has had a sharp rise to 34.15 florins (United States, \$13.728). The present gold holding of the German Reichsbank is £122,844,150 (United States, \$597, 821,056).

BANK BALANCES.

[From *L'Économiste Européen*, Paris, Dec. 28, 1917.]

The balance of the Imperial Bank of Germany on December 15, 1917, was as follows:

Items.	Values.	
	Marks.	United States dollars.
Gold reserve.....	2,406,000,000	573,109,200
Silver reserve.....	150,000,000	35,730,000
Notes of the imperial treasury and loans bureau notes ¹	1,103,000,000	262,734,600
Circulation ²	10,733,000,000	2,556,600,600
Advances.....	8,000,000	1,905,600

¹ Since Aug. 7, 1914, loans bureau notes (*Darlehenskassenscheine*), in the bank's balance are included with the imperial treasury notes (*Reichskassenscheine*).

² Besides this amount, there was in public circulation on Dec. 31, 1917, 6,265,000,000 marks (\$1,492,328,000) in loans bureau notes and 350,000,000 marks (\$83,370,000) in imperial treasury notes.

IMPERIAL BANK OF GERMANY.

EXTRACTS FROM REPORT SUBMITTED TO THE GENERAL MEETING ON MARCH 31, 1917.

[From the *Bankers' Magazine*, London, Oct. 31, 1917.]

LEGISLATIVE MEASURES.

The outbreak of the war required in the year to which this report refers (1916) some additions to the laws concerning banking, money, and currency, besides the regulations concerning the foreign exchanges.

1. In order to satisfy the continuous strong demand for small change, the chancellor was authorized by proclamation concerning the minting of 10 and 5 pfennig pieces

in iron, May 11, 1916, in addition to the notifications of August 26, 1915, and of December 22, 1915, to issue 10 and 5 pfennig pieces in iron up to the amount of £250,000 (5,000,000 marks)¹ beyond the limit fixed in section 8 of the mint law of June 1, 1909, for the minting of nickel and copper coins. In this way the sum of iron coins to be struck, the withdrawal of which has to take place two years at latest after the conclusion of peace, was increased to £1,250,000 (25,000,000 marks). By the proclamation concerning the minting of 1-pfennig pieces in aluminum, dated November 23, 1916, the imperial chancellor was authorized to mint such coins up to an amount of £100,000 (2,000,000 marks).

2. Based on section 3 of the regulations concerning the prohibition on the exportation of gold, of November 13, 1915 (Record of Imperial Law, p. 763), the chancellor of the Empire granted permission by a proclamation of February 14, 1916, for the export of hand-beaten alloyed gold leaf (so-called flake gold) for bookbinding, and also for the export of liquid "glanzgold" (cf. German Imperial Gazette of Feb. 5, 1916).

In order to render void in advance any machinations of hostile countries with respect to the generally organized purchase of goldware in Germany during the year of the report, the export of goods manufactured entirely or in part out of gold or covered in a mechanical way with gold was forbidden by the proclamation concerning the prohibition of export of goldwares, dated July 13, 1916 (Record of Imperial Law, p. 695). The imperial chancellor has the power to grant exceptions.

THE GOLD RESERVE.

The gold reserve of the Imperial Bank, the solid backbone of its existence, could not only be kept up to its full amount during the year, but since the beginning of the war it has steadily increased without any interruption. This increase amounted for the year 1916 to £3,765,000 (75,300,000 marks), so that together with the increase of the preceding period of war the amount of more than £125,000,000 (2,500,000,000 marks) was reached, and the figures of the gold reserve have thus doubled the amount standing at the outbreak of the war. Toward the end of the year 1914 the amount of £100,000,000 (2,000,000,000 marks) appeared for the first time, and in the year 1913 the amount of £50,000,000 (1,000,000,000 marks) had been exceeded for the first time.

[The gold reserve of the Imperial Bank of Germany on December 30, 1916, was £126,023,650 (2,520,473,000 marks, United States \$600,376,669). Increase since July 31, 1914, £63,365,000 (1,267,300,000 marks, United States \$301,870,860).]

THE TOTAL STOCK OF THE PRECIOUS METAL.

The stock of the precious metal, i. e., the amount of legal-tender German money and of gold in bars or foreign coins (the kilogram, fine, valued at £139 4s. (2,784 marks), was—

	Pounds sterling.	Marks.
At its highest, on Dec. 30, with.....	126, 839, 600	(2, 536, 792, 000)
At its lowest, on Jan. 7, with.....	124, 137, 600	(2, 482, 752, 000)
At its average, with.....	125, 299, 350	(2, 505, 987, 000)
Average in 1915.....	120, 225, 700	(2, 404, 514, 000)
Average increase in 1916.....	5, 073, 650	(101, 473, 000)

On December 30, 1916, the stock of metal consisted of—

	Pounds sterling.	Marks.
Gold in bars and foreign coin to the value of.....	23, 443, 260	(468, 865, 200)
Gold in German coin.....	102, 580, 407	(2, 051, 608, 140)
Total.....	126, 023, 667	(2, 520, 473, 340)
Divisional coins.....	815, 058	(16, 301, 160)
Total.....	126, 839, 625	(2, 536, 752, 500)

THE NOTE CIRCULATION.

From the end of December, 1915, to the end of December, 1916, the note circulation of the Imperial Bank has increased from £345,895,000 (6, 917,900,000 marks) to £402,735,000 (8,054,700,000 marks); that is, by £56,840,000 (1,136,800,000 marks).

¹ Valuation of a mark in United States currency, \$0.2382; in British currency, 20 marks equal £1, approximately.

AMOUNT OF COVER.

The cover for notes by legal-tender reserve (gold, divisional coins, imperial treasury notes, and loan bureau notes), to meet the legal regulations, amounted on an average for the year 1915 to 43.4 per cent; that is to say, roughly, 10 per cent higher than the law exacts and about equal to the level reached by the average cover for the month of August, 1914 (43.2 per cent). The gold cover for notes reached for the year 1916 an average of 36 per cent, which also approaches the level it stood at during the first weeks after the outbreak of war, the average for the month of August, 1914, being 37.9 per cent. The total day-to-day liabilities (notes and deposits), which are not required by law to be covered, were, in spite of the considerable increase discussed above, covered on an average thus: 26 per cent by gold, 31.3 per cent by the cash reserve, being an improvement since the first month of the war, during which the cover of gold had amounted on an average to 23.8 per cent, and by the cash reserve on average to 27.1 per cent. Thus it is proved also that the Imperial Bank has on average for the year 1916 been able, in some cases, to maintain the cover for notes and for the daily liabilities at about the level of the figure for the first month of war, and in some cases even to improve on it.

GREAT BRITAIN.

CASH IN BANKS.

[From London Bankers' Magazine, April, 1918.]

Cash in hand at call and short notice, close of 1917.

Banks.	Values.	
	Pounds sterling.	United States dollars.
England and Wales:		
Metropolitan and suburban banks.....	29,718,976	144,627,397
Metropolitan and provincial banks.....	¹ 456,626,508	2,222,172,901
Provincial banks.....	32,799,237	159,617,487
Bank in Isle of Man.....	206,657	1,005,696
Banks in Scotland.....	44,130,466	214,760,913
Banks in Ireland.....	40,087,707	195,086,826
Total.....	603,569,551	2,937,271,220

¹ Includes £59,198,840 of the Bank of England.

NOTE CIRCULATION.

The particulars of the note circulation for (close of) 1917 are as follows:

Banks.	Values.	
	Pounds sterling.	United States dollars.
Bank of England.....	46,591,020	226,735,199
Other banks in England and Wales.....	123,925	603,081
Banks in Isle of Man.....	68,395	332,844
Banks in Scotland.....	17,356,635	84,466,064
Banks in Ireland.....	22,325,583	108,647,435
Total.....	86,465,555	420,784,623

In 1917 there was an increase in the note circulation of the banks of the United Kingdom, as compared with 1916, of about £13,000,000 (United States \$63,264,500). Of this there was an increase of more than £7,000,000 (United States \$3,406,550) in the notes of the Bank of England, there was an increase of about £3,000,000 (United States \$14,599,500) among the Scotch, and more than £3,000,000 again this year among the Irish banks. The amount is considerably larger than it has been recently, the total usually having been about £44,000,000 (United States \$214,126,000) or

£45,000,000 (United States \$218,992,500), instead of about £86,500,000 as shown above. The withdrawal of the gold coin from circulation in the United Kingdom no doubt has influenced these figures. We do not include in this amount the currency note issues, since, though these are employed by the banks as specie was before the war, the banks do not issue them.

GOLD STOCK AND ARTS USE.

[From the Mining Journal, London, Feb. 23, 1918.]

In answer to various inquiries in the House of Commons, the chancellor of the exchequer said that owing to the customs prohibition of general imports there was a very small amount of gold available for the arts, and that the price of this was a matter for negotiation in each case.

As to the reserve of gold in relation to currency notes, he referred to the statement in the Gazette of January 4 last, which showed the amount outstanding of £212,450,950 (\$1,033,892,548), and the supply of gold coin and bullion for the currency note redemption account at £28,500,000 (\$138,695,000).

SILVER COINS ISSUED IN THE UNITED KINGDOM.

[From the Australasian Insurance and Banking Record, Jan. 21, 1918.]

The chancellor of the exchequer has stated that the total amount of silver currency issued for the United Kingdom from the mint in the last four years was as follows:

Year (ended July 31).	Values.	
	Pounds sterling.	United States dollars.
1914.....	1,247,720	6,072,029
1915.....	7,404,087	36,031,989
1916.....	10,362,026	50,426,800
1917.....	4,514,107	21,967,902

The total amount of silver currency withdrawn from circulation in the United Kingdom in the same years was as follows:

Year (ended July 31).	Values.	
	Pounds sterling.	United States dollars.
1914.....	602,045	2,929,852
1915.....	145,457	707,866
1916.....	91,545	445,504
1917.....	191,695	932,884

In addition, silver currency was issued from the mint for export to the colonies as follows:

Year (ended July 31).	Values.	
	Pounds sterling.	United States dollars.
1914.....	116,710	567,969
1915.....	331,520	1,613,342
1916.....	685,090	3,333,990
1917.....	885,950	4,311,476
Total	2,019,270	9,826,777

BANK OF ENGLAND.

[From the Economist, London, May 18, 1913.]

The Bank of England received its first charter in 1604. Its capital is now £14,553,000 (United States \$70,822,174), in fully paid stock, which is a "trustee" security. For each year from 1904 to 1913 the dividend was 9 per cent, paid in equal installments, free of income tax, in April and October. From April, 1914, the dividend has been at the rate of 10 per cent per annum, less income tax. The present price of the stock is 198, at which price the yield is £5 ls. (5 per cent). The authorized note issue against securities is now £18,450,000 (United States \$89,786,925), the Government debt of £11,015,100 (United States \$53,604,984) forming part of the security. All notes issued in excess of this amount must be covered by an equal amount of gold, except in so far as the currency and bank notes act, 1914, abrogates the provision of the bank act, 1844, in this connection.

The figures published by the bank are at all times full of snares for the unwary investigator, and are more so than ever in war time, owing to the very complicated business that has to be done by the bank, and the consequent cross currents that are concealed behind the inarticulate reticence of the items in its return. A fresh complication was introduced during the year 1916 by the inauguration of the system by which the Bank of England borrows from the other banks. In old times, when the bank borrowed, it deducted the sum so taken from its securities on one side and its deposits on the other. If, as is presumably the case, it does so still, there is an unknown factor which makes the figures more than ever a puzzle, since it is in the power of the other banks at any time to increase them on both sides by taking their money back. Any future historian who relies too closely on the bank's figures for information is thus likely to flounder up to his neck.

GOLD HOLDINGS IN THE BRITISH EMPIRE.

[From the Bankers' Magazine, London, February, 1917.]

Messrs. Montagu & Co. give an analysis of the holdings of gold in all parts of the British Empire, and as we do not remember previously to have seen so full a statement of the position, we reproduce their figures:

Names of banks.	Date.	Values.	
		Pounds sterling.	United States dollars.
	1916.		
Bank of England, against notes.....	Dec. 28	52,840,000	257,145,860
Treasury note reserve.....		28,500,000	138,695,250
Commonwealth Bank (Australia), against notes.....		15,057,000	73,274,890
New Zealand banks, cash and reserve, against notes.....		7,400,000	36,012,100
Canadian central note reserve.....	Oct. 18	1,440,000	7,007,760
Dominion (Canadian) Government, as reserve against note issue and savings-bank deposits.....	Oct. 31	23,800,000	115,822,700
Held by chartered banks of Canada.....	do	13,000,000	63,264,500
National Bank of Egypt, against notes.....		6,295,000	30,634,617
Indian note reserves, in India.....	Dec. 22	7,893,000	38,411,284
Indian note reserves, in London.....	do	7,947,000	38,674,076
Straits Settlements note guarantee fund.....		773,000	3,761,804

The strength of our gold position is remarkable when our enormous exports to the States and other neutral countries are remembered.

GREECE.**GREECE TO MINT MORE SILVER COINS.**

[From American Consul General Alexander W. Weddell.]

A royal decree published in Government Gazette No. 240 of October 27 (O. S.), 1917, authorizes the issue by the Greek Government of silver 1 and 2 drachma pieces up to the value of 33,000,000 drachma (\$6,369,000), to be coined from silver bars, in accordance with provisions of treaty of November 6, 1885, October 29, 1897, and November 4, 1898, of the Latin Monetary Union.

In the event that coinage is at present inexpedient, the Government is empowered to issue directly through the ministry of finance a series of 1 and 2 drachma notes up

to the amount of 30,000,000 drachmas (\$5,790,000). Of this sum the equivalent of 20,000,000 drachmas (\$3,860,000) will be issued in 2-drachma notes, while the remaining 10,000,000 will be issued in 1-drachma notes. These notes will be covered by an issue of higher denomination deposited in the National Bank of Greece, or in some foreign bank.

These bills will be accepted at par throughout the kingdom and will be receivable in payment of public taxes and debts. They will be withdrawn as the silver coins are issued, being taken in exchange therefor.

LAWS AFFECTING THE CURRENCY.

Decree of April 1, 1917, forbidding the hoarding of coins.

Decree of October 1, 1917, sanctioning the withdrawal of silver coins, which shall be replaced by Treasury notes; this decree also forbids the melting of coins.

Decree of November 4, 1917, authorizing the printing of 25-lira bank notes.

Decree of December 9, 1917, extending the time limit to turn in silver coins.

Decree of December 30, 1917, authorizing the issue of 20-centime nickel pieces of a new composition.

FIDUCIARY CIRCULATION.

[From the Commercial and Financial Chronicle, New York, June 1, 1918.]

On November 10, 1917, the *Gazetta Ufficiale del Regno D'Italia* (Jan. 7, 1918) reports the total amount of bank notes in circulation as 7,673,642,300 lire, distributed among the three banks of issue as follows:

	Lire.	United States dollars.
Issued by the Bank of Italy.....	5,985,872,250	(1,155,273,344)
Issued by the Bank of Naples.....	1,413,103,400	(272,728,956)
Issued by the Bank of Sicily.....	274,666,650	(53,010,663)
Total.....	7,673,642,300	(1,481,012,963)

Against these notes in circulation there was a reserve cover, partly of gold, of 23.2, 22.4, and 20.5 per cent, respectively. On December 31, 1917, the circulation of the Bank of Italy had risen to 6,539,200,000 lire (United States, \$1,262,065,600), secured by 21.5 per cent of total reserve, including 12.8 per cent of gold, as against an outstanding note circulation of 3,040,175,850 lire (United States, \$586,753,939) on December 31, 1915, secured by 43.8 per cent of total reserve, including 35.4 per cent of gold. There were also treasury notes issued to the extent of 1,684,000,000 lire (United States, \$325,012,000) on November 30, 1917, covered by 167,000,000 lire (United States, \$32,231,000) of metallic reserve.

The following table gives the total classified note circulation of the three banks of issue at the close of calendar years, and the like circulation of Bank of Italy:

Date.	Total bank-note circulation.		Total circulation of Bank of Italy.	
	Lire.	United States dollars.	Lire.	United States dollars.
Dec. 31, 1914.....	2,936,000,000	566,648,000	2,162,300,000	417,323,900
Dec. 31, 1915.....	3,968,100,000	765,843,000	3,040,200,000	586,758,600
Dec. 31, 1916.....	5,013,000,000	967,509,000	3,876,700,000	748,203,100
Nov. 30, 1917.....	8,119,000,000	1,566,467,000	6,338,000,000	1,223,834,000
Dec. 31, 1917.....			6,539,200,000	1,262,065,600

ITALY TO TAKE SILVER OUT OF CIRCULATION.

[Withdrawal order, operative in November, due to rise in price of the metal.]

ROME, ITALY, October 12 (1917).

"In November all Italian silver money will be withdrawn from circulation. This measure has been made necessary by the rise in the price of silver, which has doubled since 1910. England and Holland have had to increase their coinage of silver because of payments made in the Orient, and France and Russia have been obliged to do the same because silver coins were being hoarded.

"Taking the pound sterling as the standard, the Italian lira has depreciated 31 per cent, while the actual price of silver had increased. Before the war the silver lira was actually worth 38 centesimi (about 7 cents) and is now worth 92 centesimi (about 18 cents), whereas a paper lira is worth 69 centesimi (14 cents). Naturally silver money is being collected, melted down, and sold here and abroad with great profit to the sellers. Hence the necessity of the new measure."

AMERICAN PAPER MONEY IN ITALY.

[From the Numismatist, March, 1916.]

American paper money in exchange for Italian paper money in Italy brings about 8 per cent more than American gold. Americans going to Italy are advised to take paper money in preference to gold coin. In addition, they will be able to take such money out of Italy, which can not be done with gold coin on account of the law forbidding the exportation or carrying of gold out of the country, which is rigorously enforced.

LUXEMBURG.

On December 31, 1917, the monetary stock of the Grand Duchy consisted of (a) 5,000,000 francs (\$965,000) of Government notes and (b) 6,250,000 francs (\$1,206,250) of bills issued by the International Bank.

The premium on gold during the year 1917 remained constant at 100 per cent.

The Grand Duchy of Luxemburg has no gold or silver currency. Before the war the monetary stock consisted of Latin Union and German gold and silver coins, and, in addition thereto, there were notes of the Bank of France, the National Bank of Belgium, and the German Reichsbank. Since 1914, coinage has entirely disappeared from circulation; German paper currency has taken its place; French and Belgian notes are very rare.

BANK OF NETHERLANDS INCREASES GOLD RESERVE.

[From Commerce Reports, June 29, 1918.]

The position of the Bank of the Netherlands continued very strong in 1917. Its gold reserve was 162,000,000 florins (\$65,124,000) when the war began. At the end of 1915, 1916, and 1917 the gold reserve was 429,000,000 florins (\$172,458,000), 507,000,000 florins (\$203,814,000), and 698,000,000 florins (\$280,596,000), respectively.

More gold than in former years was exported in 1917, as the bank, with the consent of the Government, remitted several million guilders to Sweden, to Switzerland, and to Spain, where the guilder was below par; and, consequently, Dutch commerce had to pay above par for its imports from those countries. This was particularly the case with Sweden, where Holland has large timber interests. The normal Swedish exchange in Amsterdam is 66.67, but in 1917 the rate was sometimes up to 99, indicating a heavy loss for Holland in the lumber trade. At the end of 1917 the rate was 77.70.

Altogether the general financial condition in Amsterdam was sound and strong in 1917. This is attributed partly to war profits. It is a condition that, according to current belief, will be able to withstand any uncertainties resulting from a sudden peace or a continuation of the war.

LAWS AFFECTING THE CURRENCY.

By act of April 15, 1916, the King was authorized to release, until the end of January, 1917, the Bank of Norway from its obligation to issue notes against gold in bullion.

The King was at the same time authorized to cancel, for the same period, the right granted to anyone to take gold to the mint to have it coined into pieces of 10 and 20 kroner.

April 29, 1916, the King decided to release the Bank of Norway from obligation to purchase gold and the public right to receive coined gold from the State mint, until further notice, but not longer than the end of January, 1917.

SILVER OUTPUT OF MINES AT KONGSBERG.

[Vice Consul H. E. Carlson, Christiania, Norway, Feb. 5; in Commerce Reports, Feb. 28, 1918.]

During the past fiscal year the output of bar silver at the mines at Kongsberg, Norway, amounted to 8,072 kilos [kilo=32.15 troy ounces]. This amount is considerably below the estimated output, which had been placed at 12,000 kilos. Despite this falling off in output, the total receipts for the fiscal year of 1917 were greater by 13,000 crowns (\$3,484) than the estimate. The total receipts for the year were 756,925 crowns (\$202,855). This is said to be due to the favorable price at which silver has been sold, the average price for the year having been 93.81 crowns (\$25.14) per kilo, while the estimated price had only been 62 crowns (\$16.62) per kilo. Forty per cent of the total output was obtained from the "Kongens" and "Samuels" mines and 20 per cent from the "Gottes Hilfe" mine. It is estimated that 10,000 kilos of silver will be produced during the coming fiscal year, and that the average price will be 100 crowns (\$26.80) per kilo.

GOLD RESERVE OF NORGES BANK, CHRISTIANIA.

[From the Commercial and Financial Chronicle, New York, July 13, 1918.]

The following advices regarding the gold reserve of the Norges Bank received from Vice Consul H. E. Carlson, at Christiania, Norway, under date of May 28, appeared in Commerce Reports (published by the Department of Commerce, Washington) July 1:

"At the beginning of the year 1917 the gold reserves of Norges Bank, of Christiania, Norway, amounted to 184,000,000 crowns (\$49,312,000). This amount increased during the first two months of the year so that on March 1, 1917, the maximum for the year, 201,000,000 crowns (\$53,868,000), was reached.

"The reserve then commenced to sink, falling in August to 198,000,000 crowns (\$53,064,000), and in September to 186,000,000 crowns (\$49,848,000). By the end of the year it had fallen to 176,000,000 crowns (\$47,168,000). The average holdings of gold for the year was 190,602,402 crowns (\$51,081,433)."

PAPER "SMALL CHANGE" IN NORWAY.

[American Minister A. G. Schmedeman, Christiania, Dec. 28; in Commerce Reports, Feb. 6, 1918.]

The Norges Bank put into circulation to-day 20,000 crowns worth of 1-crown notes [at normal exchange the Norwegian crown is worth 26.8 cents United States currency] and expects to have a similar quantity ready to put into circulation to-morrow. These notes have been issued to meet the shortage of small silver change which has been felt in Norway for some time past. The same rule pertains in regard to these notes as for silver coinage of corresponding value, namely, that no one is obliged to accept a sum exceeding 20 crowns in a single payment.

PORTUGAL.

NEW SMALL COINS FOR PORTUGAL.

[From the Numismatist, February, 1918.]

Consul General Lowrie, at Lisbon, reports that owing to the disappearance of practically all gold and silver in Portugal the country is on a paper basis. New notes of 5, 10, and 50 centavos have been issued by the Bank of Portugal. Small coins of 1 and 4 centavos have been placed in circulation to relieve the scarcity of small change.

RUSSIA.

GOLD RESERVE OF THE BANK OF RUSSIA.

Following are the figures relative to the movement of the gold reserve of the Bank of Russia from July 16/29, 1914, up to the same date (July 16/29) in 1917 (from the Courier of the Bourse of Petrograd):

Date.	In Russia.		In foreign banks.		Total.	
	Value.		Value.		Value.	
	Rubles.	United States dollars.	Rubles.	United States dollars.	Rubles.	United States dollars.
July 16, 1914....	1,604,000,000	825,418,400	140,000,000	72,044,000	1,744,000,000	897,462,400
Jan. 1, 1915.....	1,560,000,000	802,776,000	173,000,000	89,025,800	1,733,000,000	891,801,800
Jan. 1, 1916.....	1,613,000,000	830,049,800	648,000,000	333,460,800	2,261,000,000	1,163,510,600
July 16, 1916....	1,547,000,000	796,086,200	1,068,000,000	549,592,800	2,615,000,000	1,345,679,000
Jan. 1, 1917.....	1,475,000,000	759,035,000	2,150,000,000	1,106,390,000	3,625,000,000	1,865,425,000
July 16, 1917....	1,292,000,000	664,863,200	2,308,000,000	1,187,696,800	3,600,000,000	1,852,560,000

NOTE.—The gold in the coffers of the Bank in Russia, during three years has declined by 312,000,000 rubles (\$160,555,200), while that which is found at the disposal of the bank in foreign countries, on the contrary, increased by 2,168,000,000 rubles (\$1,115,652,800), from which there resulted an increase of 1,856,000,000 rubles (\$955,097,600) upon the total of its gold reserve.

BALANCE OF THE STATE BANK OF RUSSIA.

[From L'Economiste Européen, Paris, Oct. 26, 1917.]

The balance of the State Bank of Russia, concluded to October 1/14, 1917 stood as follows:

Items.	Value.	
	Rubles.	United States dollars.
Gold (ingots, coins, and bonds of the administration of mines).....	1,296,000,000	666,921,600
Gold held abroad.....	2,309,000,000	1,188,211,400
Minor coins of silver and of copper.....	155,000,000	79,763,000
Discount notes.....	379,000,000	195,033,400
Short-term treasury bonds.....	14,098,000,000	7,254,830,800
Bank notes issued (except those in the bank's coffers) ¹	17,290,000,000	8,897,434,000

¹ The amount in the bank's coffers on Oct. 1/14, 1917, was 116,921,000,000 rubles (United States \$59,115,256,600).

THE SITUATION OF THE RUSSIAN STATE BANK JANUARY 1, 1918.[From *L'Economiste Européen*, May 17, 1918.]

A dispatch from Kief to German newspapers reports the balance of the Russian State Bank on January 1, 1914, as showing 1,788 millions of gold against 1,665 millions of paper; and on January 1, 1918, 1,300 millions of gold against 30,000 millions of paper. The dispatch adds that a large quantity of counterfeit paper money is now being circulated in the country.

THE RUSSIAN MONETARY SITUATION.[From *L'Economiste Européen*, Paris, Nov. 30, 1917.]

According to the Russian supplement of *l'Agence Economique et Financière*, during the eight years which preceded the war (1906-1914) the amount of bank notes in circulation in Russia had increased by less than 500,000,000 rubles (\$257,300,000); during the 38 months of hostilities there have been issued 14,254,000,000 rubles (\$7,335,108,400) worth of notes, being 28 times as much as were issued during the eight years immediately preceding the war. The average daily issue, which was of 8,000,000 rubles (\$4,116,800) in 1914, of 7,300,000 rubles (\$3,756,580) in 1915, and of 9,600,000 rubles (\$4,940,160) in 1916, from March 1 to July 1, 1917, increased to 25,400,000 rubles (\$13,070,140), and in July and August to 37,800,000 rubles (\$19,451,880). By a series of measures the capacity of production of Government notes by authorized printing offices has been quadrupled, and thus an enormous amount of notes has been turned out. These offices before the war could print 500,000 sheets a day; since the war began they have printed as many as 2,200,000 sheets a day.

The difficulty lies not only in the ever-increasing demand, but also in the instability of the issues, as different authorities have at different times forced different kinds of notes into circulation.

Though efforts have been made to partly replace the circulation of notes by developing the check system and by using Government bonds to make large payments and stamps to make small payments, the country has suffered from a scarcity of currency. In some parts of the country the operations of credit establishments have been hard hit, and sometimes they have been obliged to cease entirely for a certain period and to make only partial payments. There have been cases where insufficient currency has paralyzed the supply service and has long delayed the allowances to soldiers' families and salaries to employees.

These were the conditions which led the Government to issue temporary notes of 20 and 40 rubles, because they were easy to produce in large values, owing to their small size.

The extraordinary demand for currency necessarily conceals the hoarding which is extensively practiced by all people, high and low. It is evident that neither the real demand for currency nor the deposits and cash at the banks could absorb the 15,000,000,000 rubles (\$7,719,000,000) of notes issued. This fact is of considerable importance, for it will lead to a sounder currency, as only a small percentage of the notes are used for monetary purposes.

NEW NOTE ISSUE.[From *L'Economiste Européen*, Paris, Oct. 19, 1917.]

At Petrograd they are going to put in circulation new types of notes of 20 and of 40 rubles; they are of a very small size—about the dimensions of a match box. The reason for the new issue must be found in the conditions of Russian finances. The expenses increase, and the receipts, in spite of the increase of taxes, diminish. The Government must provide for the needs of the state with continual issues of paper money.

RUSSIA ISSUES TREASURY NOTES.[From the *Numismatist*, November, 1917.]

The Temporary Government of Russia has authorized a new issue of short-term treasury notes for 3,000,000,000 rubles (\$1,543,800,000), which are to be exchanged for new notes as they come due; provided, however, that the total sum of notes in circulation at any given time shall not exceed 18,000,000,000 rubles (\$9,262,800,000). The life, price, interest, and other factors concerning these notes remain the same as those of previous issues. It has also authorized the minister of finance to issue in foreign countries short-term treasury notes in foreign money. The general sum of such notes issued, however, must not exceed 10,000,000,000 rubles (\$5,146,000,000). As the notes already issued come due they are to be replaced by new notes.

RUSSIAN BANKING AND FINANCE.

[From the Bankers' Magazine, London, Feb., 1918.]

The following telegram has been received from the Bolshevik News Agency through Reuter's Agency:

"PETROGRAD, December 28.

"The following is the decree that has been issued for the nationalization of the banks: 'In the interest of the just organization of public property, in the interest of the energetic eradication of speculation by the banks and of the complete liberation of the workmen, peasants, and all the laboring classes from the exploitation of capital, the banks, with the object of a financial institution really of benefit to the people of the poorer classes, will henceforth constitute one single People's Bank of the Russian Republic. The central executive committee decrees that banking business shall be made a monopoly of the State. The existing joint-stock and private banks and banking houses will be amalgamated with the State Bank, and the assets and liabilities of these banks will be taken over and liquidated by the State Bank. The means by which this amalgamation will be carried out will be determined in a special decree, the temporary administration of the private banks being handed over to the council of the State Bank. The interests of small depositors will be completely safeguarded.' A decree has also been issued requisitioning the gold in safes at the banks. All money found in safes at the banks will be placed to the current accounts of clients in the State Bank. Gold in coin or bullion will be requisitioned and placed to the gold reserve of the State. All owners of safes must on being summoned immediately come to the banks with their keys. The absence of any such owner for three days after being summoned will be regarded as evidence of bad faith. The safes of owners who fail to come will be opened by a special commission appointed by the commissioners of the State Bank, and the whole contents of their safes will be confiscated for the benefit of the people. In cases deserving of consideration the commission has the right to postpone liquidation. The decree was voted by the central committee with five abstentions, while five members voted against it."

SPAIN.

THE AMERICAN DOLLAR AND SPANISH EXCHANGE.

[From the Commercial and Financial Chronicle, New York, Dec. 22, 1917.]

In a report on the above Paul H. Foster, the American consul at Bilboa, Spain, referring to the large trade balance in favor of the United States created through the interchange of commodities between Spain and this country, calls attention to the anomalous conditions existing under which until recently the creditor nation was exporting gold to the debtor nation, and he dilates upon the reason therefor. His report in the matter, made to the Department of Commerce at Washington under date of October 14, is printed as follows in Commerce Reports of the December 1 issue:

"The interchange of commodities between Spain and the United States during the year 1916 was approximately \$96,000,000, the Spanish export amounting to \$33,000,000 and the American exports to \$63,000,000, leaving a trade balance of \$30,000,000 in favor of the United States. During the year 1917 to the date of this report, the proportion in favor of the United States has increased markedly in the Bilboa district, and presumably in the rest of Spain, yet there has existed until quite recently the anomalous condition of the creditor nation exporting gold to the debtor nation.

"This condition has come about through the circumstance that the balance of trade as between Spain and Great Britain is in favor to the former, whereas the shipment of gold from the latter country to Spain is being restricted. The result has been the accumulation of large balances to the credit of Spanish bankers in London, and a consequent decline in exchange from a normal of 26 pesetas to the pound sterling and a par of 25.21 pesetas to a recent average of 21 pesetas to the pound. Spanish bankers have sold these British balances, or a portion thereof, in New York, obtaining with the proceeds American gold which they exported to Spain. As the pound costs only 21 pesetas and was sold in New York for \$4.75 and \$4.76, it was a quite profitable arrangement, making the dollar cost them only 4.31 pesetas, as against a par value of 5.18 pesetas and a normal value (in view of the adverse balance of trade) of 5.40 pesetas.

"It is quite clear, therefore, that Spain settles its adverse balances with the United States through the medium of the cheap exchange on London rather than directly,

which accounts for the apparent decline of the American dollar in the Spanish market. The proportion works out as follows: The par value of the pound (25.21 pesetas) is to the present exchange value of the pound (21 pesetas) as the par value of the dollar (5.18 pesetas) is to the present exchange value of the dollar (4.31 pesetas). The cause of this disparity lies in the fact that the British bankers have created a gold credit in the United States, which has maintained the value of the pound sterling exchange to within 2 per cent of the par, and have not taken similar measures in Spain. Possibly not considering the amount involved of sufficient importance, so that the discount on the pound is approximately 17 per cent from the par. The remedy would appear to be either for British and French banking interests to establish a gold credit in Spain, based on the Spanish securities held by them to cover unfavorable balances, or for the United States to permit the exportation of sufficient gold to cover the difference between the favorable balance due the United States and the unfavorable balances due to Spain by England, France, and Italy. The latter may not appear to be desirable from the American point of view."

BANK OF SPAIN.

[From the Bankers' Magazine, London, February, 1917.]

The Spanish minister of finances, M. Alba, proposes to renew the note-issuing privilege of the Bank of Spain until 1942, on condition that the bank shall agree to a number of increased facilities. The principal conditions, says the Financial Times, are that the Spanish treasury shall have its current account (advances) increased to 100,000,000 pesetas (\$19,300,000) silver, for which it shall pay interest at 1 per cent per annum. The bank shall agree to waive all further and future interest on the Spanish Government overseas floating debt of 100,000,000 pagarés (promissory notes) which the bank now holds. The State shall impose a 1 per mille stamp duty per annum on all notes, which may be considered as "productive circulation." The State shall participate to the extent of 25 per cent in the bill case of public effects or negotiable securities held by the bank. Those various concessions represent an annual gain to the State of between 7 and 8 millions of pesetas. An essential condition of the renewal of the privilege is that the Bank of Spain shall not be able to exact from the State the repayment of the 150,000,000 of pesetas (\$28,950,000) advanced in 1891, and of the before-mentioned 100,000,000 pesetas overseas debt until 1942, the State, however, to have the privilege of repaying its debt at the rate of 25,000,000 pesetas (\$4,825,000) per annum, but on all sums so reimbursed the Bank of Spain is to pay the State 5 per cent per annum, so that, if and when the State shall have repaid the whole of its debt of 250,000,000 pesetas (\$48,250,000) to the bank, it will be drawing interest to the extent of 12,500,000 pesetas (\$2,412,000) per annum. This is probably the first time on record that a European bank of issue is asked to pay interest on money that is actually owing to it by the State. The metallic reserve which the Bank of Spain must keep is stipulated to 3,000 millions of pesetas (\$579,000,000), and the proportion of metal reserves to notes in circulation must be 50 per cent. Two-thirds at least of the metal reserves must be in gold or gold bars, the remainder in silver. The reserve fund of the Bank of Spain must be gradually increased, out of profits, to 50,000,000 pesetas (\$9,650,000). Finally, it is intended that on and after December 31, 1926, the note-issuing privilege of the Bank of Spain may be canceled on 12 months' notice being given, and subject to the State reimbursing to the bank in full all the sums owing to the bank.

COINAGE FOR SWEDEN FOR 1917.

[From the Numismatist, May, 1918.]

During 1917 the coinage in Sweden was as follows:

In bronze:	Pieces.
25-öre.....	1, 650, 000
10-öre.....	5, 000, 000
2-öre.....	916, 000
1-öre.....	1, 200, 000
Iron coins:	
5-öre.....	2, 000, 000
2-öre.....	4, 000, 000
1-öre.....	8, 000, 000

The total amount of the above subsidiary coinage was 1,209,388 kroner (\$324,116).

SWEDEN'S IRON COINS PLACED IN CIRCULATION.

[From the Numismatist, June, 1917.]

The director of the mint at Stockholm, Sweden, has surprised the Riksbank and the general public with a supply of 1-öre iron coins to the amount of 7,000 kroner (\$1,876), which were immediately distributed in the market in small lots, generally to the amount of 3 or 4 kroner to each individual. The 2 and 5 öre pieces are expected to soon follow.

GOLD SURPLUS.

[From the Numismatist, March, 1916.]

The Swedish Parliament has accepted a bill empowering the King to authorize the National Bank to refuse gold offerings and also cease coining, according to a dispatch to the Exchange Telegraph Co. from Copenhagen. The measure was introduced, says the dispatch, owing to fears that the bank would be overloaded with gold. The holdings increased from 113,000,000 kroner in December to about 160,000,000 kroner (about \$40,000,000).

COPPER COINS DISAPPEARED.

[From the Numismatist, October, 1916.]

Copper coins in Sweden have of late become very scarce, and in some localities there are none in circulation. It is a common practice for the crews of foreign merchant vessels in Swedish ports to exchange their currency for all the copper 5 and 2 öre coins they can obtain, and in this way they are taken out of the country.

[From the Numismatist, May, 1917.]

From the Province of Skane, in Sweden, it is announced that persons are buying up copper coins. For instance, three 5-öre pieces are paid for with 25 öre. The 1-öre pieces are sold per liter for 35 kroner. A liter does not hold more than about the value of 10 kroner of 1-öre copper coins.

SWITZERLAND.

There was no gold or silver coinage during the year ended December 31, 1917. There was executed nickel coinage (10 and 5 centimes) of the face value of 90,000 francs (\$17,370), and brass coinage (10 and 5 centimes) of the face value of 55,000 francs (\$10,615); the latter to be withdrawn as soon as sufficient nickel and copper will again be available. The 200,000 50-centime silver pieces provided for in the 1917 budget to replace withdrawn worn coinage were not struck.

Fractional silver coinage to the amount of 46,450 francs (\$8,965) was withdrawn from monetary use during the year ended December 31, 1917. Counterfeit coins to the amount of 1,091 francs (\$210) were also withdrawn and destroyed.

The amount of gold used in the industrial arts during the year ended December 31, 1917, was 40,000,000 francs (\$7,720,000); the amount of silver used for the same purpose was 8,250,000 francs (\$1,592,250).

Approximate stock of gold and silver, also of paper money, used for monetary purposes on Dec. 31, 1917.

United States equivalent.....	\$79,140,709	\$135,344,423

¹ The Swiss Confederation does not issue Government notes except under exceptional circumstances.

The total Swiss gold and silver coinage issued up to December 31, 1917, was:

Francs.

Gold.....	202,600,000
Silver.....	67,930,000
Total.....	270,530,000

Such worn coins as have been withdrawn from time to time have been replaced by new coins, with the exception of 141,278.50 francs in silver remaining on December 31, 1917, to be recoined.

During the year 1917 the Swiss Government returned to the French treasury French worn fractional silver coins to the amount of 620,000 francs (\$119,660) and received an equal amount of Swiss fractional silver coins in exchange therefor.

The Swiss National Bank notes in circulation on December 31, 1917, totaled 702,302,710 francs, an increase over last year of 165,784,755 francs. The reserve against same on December 31, 1917, was:

Metallic reserve:	<i>Francs.</i>
Gold coin and bullion ¹	357,644,161
Silver 5-franc pieces.....	51,830,320

BRASS COINAGE DECREE.

[From Bulletin de Statistique, April, 1916.]

DECREE OF OCTOBER 23, 1917.

1. There shall be struck and placed in circulation, as needed, 3 millions of 10-centime and 2 millions of 5-centime brass pieces.

2. The weight and diameter of the above coins shall correspond exactly to the weight and diameter prescribed by the law of March 29, 1879, for the nickel pieces of the same nominal value.

3. The stamp of the 10 and 5 centime brass pieces shall be the same as that of the 10 and 5 centime nickel pieces.

4. The 10 and 5 centime brass pieces shall have the same legal currency as the 10 and 5 centime nickel pieces executed according to the Federal law of March 29, 1879.

5. Upon reestablishment of normal conditions, the 10 and 5 centime coins, manufactured in fulfillment of the present law, shall be withdrawn and melted.

Bern, October 23, 1917.

Coinage during the year ended Dec. 31, 1916.

Denomination.	Value.	
	Francs.	United States dollars.
Gold (new coinage): 20-franc pieces (for the Swiss National Bank).....	6,000,000	1,158,000

50-centime pieces.....	¹ 400,000	77,200
Total gold and silver.....	² 7,966,940	1,537,619

¹ The 800,000 50-centime pieces coined in 1916 replaced an equal number of Swiss pieces worn out and withdrawn from circulation, whence they do not appear on the coinage tables.

² Of the silver coinage 1,500,000 francs (\$289,500) was new, and 466,940 francs (\$90,120) was recoinage from domestic silver coins.

It is estimated that during the calendar year 1916 about 12,000 kilograms (383,800 fine ounces) of gold was used in the industrial arts. During the same period silver to the amount of 76,000 kilograms (2,443,400 fine ounces) was used for the same purpose.

TURKEY.

GOLD PIASTER IS MADE MONETARY UNIT IN TURKEY.

BERLIN, April 17, 1917 (by wireless to Sayville).

The Turkish Government has introduced the gold standard, with the gold piaster as the monetary unit. The Overseas News Agency says:

"All former differences between the gold piaster, the silver piaster, and the Government piaster have been abolished. Long-standing debts will be paid in accordance with the former standard. Graduated scales have been established for liabilities recently incurred. The Government is opening official bureaus for changing money."

(The ordinary silver piaster is worth about 4 cents. The gold piaster, nominally of about the same value, has been merely a standard. For official purposes the piaster is reckoned as one-nineteenth of the silver mejidie, which has been legal tender in any amount.)

MONETARY SITUATION IN TURKEY.

[From *L'Economiste Européen*, Paris, Mar. 17, 1916.]

The Journal de Genève of the 13th instant says:

Turkey has been at war for over a year, and, true to the tradition of its financial chaos, it does not know how it is going to meet its war expenses. It is nevertheless a fact that the requisitions made throughout the Empire have been numerous and that they have not yet been settled.

Treasury notes have been issued in denominations of $\frac{1}{2}$, 1, 2, 3, and 4 Turkish pounds (1 Turkish pound equals 22.78 francs, or \$4.40 in United States money) to an unknown amount. These notes are to replace the gold fractional coins, which were not to circulate after March 1, 1915.

There was under consideration the reorganization of the Imperial Ottoman Bank, the withdrawal of its privilege to issue, and the creation of a new State bank; but since the French and English administrators resigned, the Ottoman Bank has become a national institution. Its general director is Hamid Bey; the board of directors comprises Djavid Bey, minister of finance; Von Wassermann, German ambassador; and two members of the board of directors of the Bank of Anatolia, representing the Deutsche Bank and the Vienna Federation of Bankers. The bank has been authorized to issue 5,000,000 pounds (\$22,000,000) of new notes. The last report gives the gold reserve of the bank as about 300,000,000 francs (\$57,900,000).

The treasury has issued a series of Turkish pound notes (6,480,000 in all) guaranteed by a deposit of 15,000,000 francs (\$2,895,000) in gold held at the Reichsbank and at the Austro-Hungarian Bank. These notes will be redeemable in gold six months after the conclusion of peace. This contingency proving slow of accomplishment, they have issued a new series of 6,000,000 pounds (\$26,400,000) in notes guaranteed by German treasury bonds. All of these notes have currency. The notes of German private banks circulate in considerable numbers and are exchanged at the rate of 20 marks (\$4.76) for 1 Turkish pound.

The moratorium (the suspension of specie payments) is still in force, though the banks reimburse 5 per cent of the deposits (minimum of 10 pounds) at fixed dates. The last dates of reimbursement were October 14 and November 28, 1915.

From an economic point of view, supplies are difficult to secure. The city of Constantinople has had to take over the supplying of wheat. The general increase in the price of foodstuffs is high. The Agricultural Bank is making loans to farmers.

Finally, it has recently been announced that the Turkish Parliament has passed a bill according to which the loan of 5,000,000 Turkish pounds at 6 per cent made by Germany as per agreement of February 14, 1915, for the construction of certain strategic roads, has been increased to 7,112,000 Turkish pounds and the interest reduced to $5\frac{1}{2}$ per cent.

AUSTRALIA.

CORRECTION.

The 1917 report of the Director of the Mint gives, on page 258, as gold coinage of Australia only that executed at the Melbourne mint, viz, £1,700,671 and £1,273,643, respectively, for 1915 and 1916. Including the coinage executed at the Sydney and Perth mints, these figures should read £7,934,376 (\$38,612,640) for 1915 and £6,836,414 (\$33,269,409) for 1916.

[From the Commercial and Financial Chronicle, New York, June 1, 1918.]

Australian notes made their first appearance in December, 1910. The Australian note act of 1910 authorized the Commonwealth treasurer to issue notes which were to be legal tender throughout the Commonwealth and redeemable at the seat of government. These notes were to be issued in denominations of 10 shillings, £1, £5, £10, £20, £50, and £100. The act prohibited issuance of notes by any State six months after the date of its enforcement and on the same date all such notes ceased to be legal tender a tax of 10 per cent was placed on all bank notes issued or reissued by any bank in the Commonwealth and not redeemed.

The act also directed the treasurer to hold as a reserve against notes, gold coin, with the following stipulations: (1) Not less than 25 per cent of gold coin against notes issued up to £7,000,000, and (2) 100 per cent reserve of gold coin against any amount in excess of £7,000,000 (United States \$34,065,500). In 1911 an amendment was passed altering the percentage in force and requiring a flat rate of 25 per cent of gold coin against all issues. The latter regulation was to go into effect July 1, 1912, but the treasurer deemed it wise to defer putting it into operation until after the elections of 1913.

The elections of 1913 resulted in a change of administration and the new treasurer, Sir John Forrest, announced that they would retain the gold reserve at the rate provided in the original act. This condition was maintained until September, 1914 when a change of policy was necessitated by the progress of events occasioned by the war. On December 24, 1912, the ratio of gold coin to notes issued was 44.6 per cent; on December 27, 1913, it was 45.22 per cent, and on December 30, 1914, it had fallen to 40.27 per cent. Since then the ratio has declined still further, reaching 30 per cent on January 30, 1918.

In 1911 a Commonwealth bank was established. It has no power to issue notes, but aside from this prohibition it possesses all the characteristics of other central state banks.

MINT ISSUES OF GOLD AND SILVER.

[From the Australasian Insurance and Banking Record, Jan. 21, 1918.]

The total issues of gold coin and gold bullion at the three mints (at Sydney, Melbourne, and Perth), for 1917, as stated in the mint returns, are summarized as follows:

Classification.	Value.	
	Pounds sterling.	United States dollars.
Gold coin.....	6,710,755	32,657,889
Gold bullion.....	227,374	1,106,516
Total.....	6,938,129	33,764,405

The total issues of gold coin and bullion at the three mints for 1916, amounted to £7,367,398 (United States, \$35,853,442), and for 1915 to £9,061,381 (United States, \$44,097,211).

Silver bullion issued at Perth branch mint during 1917 amounted to £27,523 (United States, \$133,941).

QUEENSLAND.**OUTPUT OF GOLD.**

[From Commerce Reports, May 27, 1918.]

The total value of gold produced (in 1917) was \$3,706,516, which was a decrease of \$741,226 from that of 1916.

WESTERN AUSTRALIA.

The gold coinage executed during the year ended December 31, 1917, was (sovereigns) £4,110,286 (\$20,002,706). The silver coinage for the whole of Australia is executed at the Melbourne mint. Bronze coin for the Commonwealth was struck at the Calcutta mint.

Gold sold at the royal mint to jewelers and dentists, 1,148 fine ounces (\$23,682); silver sold at the royal mint to jewelers and electroplaters, 1,989 fine ounces (\$1,781). There was returned to monetary use from the industrial arts 434 fine ounces of gold (\$8,986) and 118 fine ounces of silver (\$106).

The domestic production during the year ended December 31, 1917, was 970,317 fine ounces of gold (declared value, \$20,057,985) and 221,775 fine ounces of silver (declared value, \$198,544).

The note currency used in the State is issued by the Australian Commonwealth. There is no premium on gold.

CIRCULATION OF THE AUSTRIAN MARIA THERESA DOLLAR IN THE ADEN-RED SEA DISTRICT.

[From American Consul Addison E. Southard.]

ADEN, November 5, 1917.

The Austrian Maria Theresa dollar is an important article of commerce, as well as a medium of exchange extensively used in the Aden-Red Sea district. There are no accurate figures available, nor are there reliable means for securing them; but using figures obtained from merchants who have done a large business in the import and export of these coins, it is estimated that at the beginning of the war there were in circulation or hoarded as treasure in the entire district as many as 200,000,000 of these dollars.

The Maria Theresa dollar is a large silver coin apparently somewhat greater in size than the American dollar. It is accepted in this district by the natives as weighing 480 grains, or 1 ounce, and is so used in weighing civet and other commodities which are sold by small weights. In reality the coin weighs but 433.080 grains and is 0.833.33 in fineness, according to local banking representatives. All of these coins are the same in design and are dated 1780. On one side is a bust of Queen Maria Theresa, of Austria, and on the other is the Austrian double eagle. The workmanship is somewhat crude, and although the dollars have been minted up to modern times the style of die, the date, etc., has never been changed. The reason for this is that the original Maria Theresa dollar established among the natives of this district was that of 1780, and any change would not have been understood by the Arabs and Abyssinians, who use it the most, and would probably have affected the market value and ready circulation in the commerce of the district. The dollar is not milled and the design on each side thus becomes considerably worn with use. A worn dollar is not accepted at full value. As long as the crown on the queen's head and a brooch on her shoulder are sufficiently distinct to show the number of jewels which they contain—7 for the crown and 10 for the brooch—the dollar is accepted at full value. When these two marks become worn, and they are usually the first to show wear, the dollar loses in value accordingly.

The history of the introduction of the Maria Theresa dollar—thaler or "rial," as it is variously known here—is somewhat obscure. Local information is to the effect that about a century ago trading Arabs obtained some of these dollars and found Queen Maria Theresa's effigy so attractive that they began acquiring them to be used as jewelry by their women. This practice developed until it became the custom to hoard Maria Theresa dollars as wealth, and from that stage the dollar soon developed into a regular and popular medium of exchange in mercantile transactions. The use of the dollar soon spread to the countries on the neighboring African coast and it is now practically the only generally accepted coin in circulation in Abyssinia. It is very widely used in Arabia, although the Turkish Government has tried in many ways to prevent its circulation as money. The importation of these coins was at times prohibited and at other times an import duty of 9 per cent has been levied. The Arab is, however, so fond of the Maria Theresa dollar that he will spare no effort to get it in return for his produce, and when the importation was prohibited by the Turkish Government there was a large and profitable business done in smuggling supplies of dollars into Turkish Arabia via Aden or Hodeidah and other former Turkish Red Sea ports.

In normal times banks and prominent merchants in Aden and in other Red Sea ports received regular importations of these dollars from Trieste, which they sold at a good profit or exchanged for native produce. The price of native produce in terms of Maria Theresa dollars changed very little. The value of the dollar did, and does, fluctuate in the seaport markets with the price of silver, and there is accordingly a chance to buy produce at much under its actual market price and thus make a handsome profit. On the other hand, an exporter might contract to pay a large sum of dollars for produce and the price of silver suddenly go up. He then stands to lose heavily. It is a game of speculation at best, but evidently a very attractive game, as there seems to have been no important effort outside of those made by Government to eliminate this dollar as an article of commerce or as a medium of exchange.

The Maria Theresa dollar is probably found in greatest quantities in the Yemen and Aden hinterland, in other parts of Arabia, in Abyssinia, in Eritrea, in British, French, and Italian Somalilands, and in Persian Gulf ports, in the order named.

So far as can be learned this dollar has been allowed to circulate practically without hindrance on the neighboring African coast. A few years ago the Abyssinian Government had minted in Paris the so-called Menelek dollar, with fractional coins, which it was hoped would not only increase the amount of coin in circulation in that country, but would also eventually take the place of the Maria Theresa dollar in Abyssinian favor. The attempt was apparently unsuccessful, for the Abyssinian trader has not yet lost his affection for the Austrian dollar. One authority has estimated that there are at least 25,000,000 Maria Theresa dollars in Abyssinia, but it is quite possible, according to merchants doing business in that country, that there are many more than the amount named.

The rupee is the currency unit used in Aden and the local government does not recognize the Maria Theresa dollar as a medium of exchange. The Arabs who bring in produce from the interior must take their pay in rupees, which they reluctantly do. They immediately, however, take their rupees to the money changers and exchange them for Maria Theresa dollars to take back home. So eager are the Arabs to get these dollars that they will often pay a sufficiently high price for them in rupees to give the money changers a very handsome profit.

The value of the dollar is usually computed in rupees. The United States Treasury value of the rupee is \$0.3244. The lowest value which the Maria Theresa dollars have reached in many years is said to have been at the rate of 100 dollars for 112 rupees, and the highest value reached is at the rate of \$100 for 198 rupees, the last named figure being a recent quotation. Since the price of silver has gone up a very profitable business has been done by Aden-Red Sea merchants in purchasing Maria Theresa dollars for export to London or Bombay, where they are melted into bullion bars. There has been a great deal of speculation and some very high prices have been paid in the hope of a more rapid rise in the price of silver, but which failed to materialize at the time, and has resulted in considerable losses to the merchants engaged in the business. Advantage has been taken of the Arab's dislike for and undervaluation of worn dollars, the bullion value of which was materially decreased, and which could be bought for 10 rupees, or less than the price asked for the coins which were not noticeably worn or mutilated.

It is predicted that the price of the Maria Theresa dollar will go higher this year than ever before. There are said to be considerable quantities acquired, at from 180 to 195 rupees per hundred, which are being held in the expectation that the rate will go beyond 200 rupees. The importation of the dollars into Aden is prohibited at present, but there is a steady demand from the interior. The recently independent Arabian ports of Medi and Ghizan are at present said to be the chief importers.

Maria Theresa dollars, which cost 198 rupees per hundred in Aden, can be bought at the rate of about 168 rupees per hundred in Djibouti, the French Somaliland port, 135 miles from Aden on the opposite African coast.

The number of dollars which have been purchased since the beginning of the war and exported for melting down into bullion bars is estimated at 40,000,000. There are naturally no new supplies available from Austria, and some of the Red Sea governments hope to so reduce the supply of Maria Theresa dollars that the natives will be forced to use the coins of the various political divisions in the district as a medium of exchange in place of their favorite dollars.

There is a considerable supply of these dollars in the Turkish Yemen, and the Turkish military commander at Lahej is reported to have gathered many of them in collections of taxes and contributions from the Arab population. He does not like the dollars and is said to urge the Arabs who come into Aden to trade to bring out Turkish gold pounds, for each of which he will give them nine Maria Theresa dollars. This proposition is not only attractive to the Arab from the point of actual exchange value (\$9 at the present rate being worth about \$5.75 in United States currency), but is attractive also because of his fondness for the Maria Theresa dollar as an article of jewelry and for hoarding.

In many parts of Arabia adjacent to Aden and the Red Sea, and in parts of Abyssinia, the use of the Maria Theresa dollar as a medium of exchange is attended with some inconvenience from the European viewpoint, owing to the lack of small change. The native does not mind this so much, as he will receive as change various staple articles of merchandise which have an exchange value. In some parts of the Aden hinterland and of the Yemen there are Turkish small coins in circulation. The rupee and anna pieces may also be used at some of the port towns. In 1916 the sheikh of the independent Arab ports of Medi and Ghizan introduced his own small coins, which are theoretically worth 2 annas (4 cents) each. Sixteen of these coins equal a dollar.

In a few of the larger trading centers of Abyssinia small change is made with the use of various coins, principally with Menelek piasters, of which 16 go to the dollar. In other parts of Abyssinia bars of salt and rifle cartridges are the only change current. The bars of hard rock salt used are about 10 inches long and a little over 2 inches in breadth and thickness. There are from 5 to 8 "salts" to the dollar, depending upon the distance from the source of production of the salt. Three cartridges are usually considered equal to a "salt."

The present time is one of the most interesting periods in the history of the use of the Maria Theresa dollar in this part of the world, and its immediate future will be equally interesting. In the opinion of traders, its place can never be taken by any other coin, so long as supplies are available. The Arab and the Abyssinian have learned to appreciate this Austrian dollar as the only worth-while coin to have. They like the design, and the large size is most attractive, particularly in normal times, when it can be purchased for the much smaller rupee and a few (4 to 6) annas in addition. The Maria Theresa dollar habit, like most long-established native habits, will be a difficult one to break.

BRITISH INDIA.

MONETARY SITUATION.

[From the Economist, London, July 27, 1918.]

The Review of the Trade of India in 1916-17 states as follows:

As a result of the difficulties placed in the way of exporting gold by belligerent countries, the imports into India were only 40 per cent of the average imports during the prewar quinquennium. There was also a notable change in the source of these imports. Before the war gold was imported at certain times of the year in large quantities by the exchange banks and bullion brokers from the United Kingdom, and sovereigns in transit from Australia or ready for export from Egypt were frequently diverted to India. The United Kingdom, Egypt, and Australia were, in fact, the chief sources of supply. In 1916-17, however, Natal, China, and Japan were the chief countries of consignment. The shipments from Natal amounted to £6,091,000 (United States, \$29,641,851), of which £6,054,000 (United States, \$29,461,791) were in bar gold. The whole of this bar gold is warehoused in Bombay on behalf of the Bank of England. The shipments from China were also in bullion, while those from Japan were in sovereigns. The imports from the United States were abnormally high, since the United States rarely ships gold in any quantity direct to India. The exports out of India were comparatively unimportant, and were chiefly in the form of sovereigns to meet the requirements of troops in Mesopotamia and Egypt. The absorption of gold coin and gold bullion was £5,393,000 (United States, \$26,245,034). This figure, although greater than that of the preceding year, was still much below the average of the prewar quinquennial period.

MYSORE STATE.**GOLD OUTPUT.**

[From report of the department of mines and geology for fiscal year 1915-16.]

The output of bar gold during 1915-16 was 558,381 ounces of an approximate value of 31,132,760 rupees (\$10,099,467) which, compared with 570,886 ounces of the value of 32,865,540 rupees (\$10,661,581) in 1914-15, shows a decrease of 12,505 ounces in output and of 732,780 rupees (\$237,714) in value.

NATIVE STATE OF TRAVANCORE—SUBSIDIARY TO MADRAS.

¹ Value of Sirkar rupee is unknown; converted on basis of Hyderabad Sicca rupee, which is valued at \$0.283879 United States money.

Against a total withdrawal of 572,607 rupees (\$185,754) worth of silver coins in 1911, new silver coins of the face value of 357,135 rupees (\$115,855) and copper coins of the face value of 1,363,790 rupees (\$442,413) were minted till the close of 1915. Copper coins to the face value of 40,893 rupees (\$13,266) were minted during the year. Thus the total face value of the Darbar coins minted up to the end of 1916 amounted to 1,404,683 rupees (\$455,679). Of these, silver coins of the face value of 60,102 rupees (\$19,497), and copper coins of the face value of 385,572 rupees (\$125,080) were in circulation at the close of the year 1916, the balance remaining in the Darbar treasuries.

The amount of silver coins withdrawn from circulation during the year 1916 was about 217 rupees (\$70).

CHINA.**CHINESE COINS.**

[By A. W. Ferrin, United States commercial attaché at Peking, in the Numismatist, March, 1918.]

To the minds of most people who have not visited China in recent years the words "Chinese coins" connote thin round pieces of copper with square holes through which a cord may be run. "Cash" are indeed still to be found in the remoter Provinces, in spite of the assiduity with which the Japanese have been buying them up and melting them down for their copper content, which is worth more than the value of the "cash" as a medium of exchange. But "cash" are rarely seen in the larger cities, and the accumulation of 100 cash in Peking recently required visits to a dozen cash shops, and then the pieces were unstrung. Requests for a "string of cash" were everywhere met with the answer "mayo," which is the Chinese equivalent of the American "nothing doing."

Silver dollars, with subsidiary silver 20 and 10 cent pieces and coppers representing 10 cash, or 1 cent, have superseded "cash" everywhere except upcountry. Since 1915 the Government has been gradually and successfully introducing a standard silver dollar known as the "yuan," not because it bears the image of Yuan Shih Kai, which it does, but because the Chinese word "yuan" means a "round object." Recently 50, 20, and 10 cent subsidiaries of the yuan, which are in fact what they are, have been coming into circulation alongside the old 20 and 10 cent pieces, which are not the fifth or tenth part of a dollar, but whatever the cash shops say they are. These older subsidiaries, with copper coins, are the "small money" which travelers soon find are not decimal subdivisions of "big money." At present it takes 12 of the old 10-cent pieces, 6 of the old 20-cent pieces, or 120 old coppers to make a dollar at most of the Peking cash shops, but variations from this temporary standard are numerous. Two yuan 50-cent pieces, five 20-cent pieces, ten 10-cent pieces, or 100 coppers make a dollar, according to law, and anybody who refuses to accept them at these values may be punished by fine of from \$10 to \$1,000.

The Mexican dollar still circulates, but in lessening numbers, while the various dragon and other old dollars are being but gradually replaced by the new yuans. Some 200,000,000 of the yuan dollars have been put into circulation, and during the past year (1917) the yuan subsidiaries, 50-cent, 20-cent, 10-cent, and 1-cent pieces, have been gaining headway, but they are not yet common. Even in Peking the 1-mace 44-candareen pieces of the Manchus (20 cents) and the 72-candareen pieces (10 cents) are still the popular "small money," in the face of the obvious advantage of the decimally divided yuan coinage.

One of the first objects of the revolutionists of 1911 was the establishment of a uniform coinage. How well that object was realized is indicated by the fact that Dr.

Guiseppe Ros has collected no fewer than 126 different coins struck or cast since the beginning of the republican régime, including 10 different silver dollars and two 1-tael pieces. The existence of these 1-tael pieces should not be misunderstood, however. The tael is not normally a coin, but a Chinese ounce of silver, and the tael coins discovered by Dr. Ros are "freaks" struck in Sinkiang in 1912, which never circulated to any extent. Bullion silver is, for convenience, cast into "shoes" of so many taels, which are not in any sense coins, though 50-tael "shoes" are in common use between banks, and even a 1-tael piece can with difficulty be obtained as a curiosity.

It was not until the third year of the Republic (1915) that the national coinage act was passed and the "yuan," popularly known as the Yuan Shih Kai dollar, became the legal unit. Meantime the many other dollars of provincial origin had obtained more or less wide acceptance, and it will be a long time before the yuan completely displaces these dollars and the old dragon dollars of the Manchus. Dragon flags have been driven off the streets, but dragon money is harder to conquer.

Of the silver dollars struck since the birth of the Republic, three bear the image of Yuan Shih Kai, two of Li Huan Hung, and one of Sun Yat Sen, who also appears on a gold dollar. The others are less personal, and bear some kind of republican emblem. Yuan Shih Kai, besides having his face on three silver dollars, is commemorated by three imperial coins, issued while he was trying to make himself Emperor.

The imperial coins of Yuan Shih Kai, or of Hung-Hsien, to call him by his "reign name," are: Ten dollars gold, bearing the head of Yuan Shih Kai on the obverse and on the reverse a dragon (emblem of the Empire) grasping a bunch of arrows in its left front paw and a scepter in the right, with "The Empire of China" above it and below the words "The Beginning of the Hung Hsien" and "Ten Dollars."

One chio, silver (10 cents), the obverse of which contains the words "First Year of Hung Hsien" and "In Commemoration of the Change of Régime," in addition to the words "Silver Coin of China" in a central circle. On the reverse is a dragon crawling around the words "One Chio."

Ten cash, bronze, reading on the obverse, in English, "The First Year of Hung Shuan (the name is romanized wrong) Ten Cash," and on the other side "Copper Coin of the Value of Ten (cash)," "First Year of Hung Hsien" and "Commemorative of the Change of Régime" in Chinese, with floral ornaments.

The 10-dollar gold piece (struck at Tientsin) was never circulated, and the silver 10-cent piece, minted in Hunan, was soon withdrawn from circulation.

The 123 republican coins collected by Dr. Ros include silver dollars, 20 and 10, cent silver pieces, copper cents; bronze and copper pieces of 200, 100, 50, 20, 10, 5, 2, and 1 cash; 2 chio, 1 chio, 1 fen, 5 li, 5 mace, and 1 mace and 44 candareens, the silver. The last named is of the same denomination as the 20-cent piece of the Manchus, who also had a 72-candareen piece (10 cents), which is still in extensive circulation.

IMPORT AND EXPORT OF GOLD AND SILVER.

Samuel Montagu & Co., London, state, under date of June 27, 1918:
The Chinese customs return gives the following figures as to the imports and exports of treasure during the last calendar year, in Haikwan taels:

Gold.		In bars, dust, etc.	In coin.	Total.
		711,036	13,160,742	13,871,778
Imports.....		4,700,424	324,151	5,024,575
Exports.....				
Silver.		In bars and sycee.	In coin.	Total.
		16,197,966	11,309,326	27,507,292
Imports.....		33,080,586	15,409,804	48,490,390
Exports.....				

The above figures show a net import of gold amounting to 8,847,203 Haikwan taels and a net export of silver amounting to 20,983,098. These respective totals (calculated at the average value of the Haikwan tael during the last year, given by the above authority as 4s. 3½d. = \$1.05+) are equal to about 1,909,000 and 4,530,000 pounds sterling (\$9,290,148 and \$22,045,245). Although other factors enter into the

composition of the large exports of silver, the contrast between the movements of the two metals certainly indicates that the Chinese considered gold cheap and silver dear at the prices current during the period in question.

DEVELOPMENT OF THE BANK OF CHINA.

[Acting Commercial Attaché A. W. Ferrin, Peking, in Commerce Reports, Feb. 7, 1918.]

The Bank of China was established in 1912, after the inauguration of the Chinese Republic, to take the place of the Ta-Ching Bank, which had been organized by the Manchu Government as the official bank of the country. It was intended to be owned jointly by the Chinese Government and private stockholders, each subscribing half of the 600,000 shares of \$100 (Chinese currency) each, which were to make up the authorized capital of \$60,000,000; and the private stockholders were to have equal voice with the Government in its management. It was soon found, however, that the authorized private capital could not be raised, and the bank opened on August 1, 1912, with a nominal capital of \$10,000,000, of which considerably less than half was privately subscribed. The rest was put in by the Government, mostly in the form of bonds. The actual cash capital was not more than \$3,000,000 or \$4,000,000.

Nevertheless, the bank made rapid progress, and after reorganization in 1913, in order to correct some initial errors, its deposits rose in one year from \$17,000,000 to \$57,000,000. In 1913 it earned \$280,000 net; in 1914, \$1,400,000; and in 1915, \$2,600,000. It opened branches throughout the Provinces and did a large business in internal exchange, becoming a serious competitor also of the foreign banks in the treaty ports in foreign exchange. It issued bank notes, acted as fiscal agent of the Government in the collection of the salt and other taxes in the interior, and bade fair to become an important and influential institution.

WEAKENED BY PROVISION OF CONSTITUTION.

Its lack of capital was made up by the advantages which its official position conferred upon it; but it was weakened seriously by Article XVI of its constitution, which delayed the formation of a directorate and inspectorate until private capital should have subscribed 100,000 shares, thus leaving control of the bank in the hands of Government appointees. In October, 1915, the Bank of Communications, the fiscal agent of the ministry of communications (which controls the railroads, telegraph, and post office), was made a national bank with power to issue notes—a privilege which it had been intended to restrict to the Bank of China—and the competition cut into the profits of the Bank of China. It was not this, however, which caused the Bank of China its most serious difficulties, but the facility with which the Government was able to obtain from it loans for purposes that proved unproductive. Consequently, both the Bank of China and the Bank of Communications have become congested with Government paper. Through their head offices in Peking they have some \$60,000,000 in notes outstanding, without adequate reserve.

These notes at present are acceptable for passenger and freight payments on Government railways and are redeemable in small amounts in Peking. They fluctuate between 65 and 75 cents on the dollar. Their use for railway payments is not believed to have had much influence on their price, though it has seriously affected the finances of the railways, which have to take them at par. The notes of the branches of the banks, with few exceptions, circulate at par, for the branches are largely independent and maintain separate reserves against notes which they issue. The branch note issues, moreover, have been small.

EFFORTS TO REESTABLISH CREDIT.

It has long been recognized by the officials of the Bank of China that their first duty is to reestablish the credit of the bank's notes, which means the creation of a reserve, and they have been trying hard to obtain a foreign loan for this purpose. It would not be difficult, according to foreign bankers who have studied the problem, to create without a foreign loan a reserve out of the Government's own revenues and to operate on a comparatively small reserve by making all internal taxes, except those already pledged under foreign loans, payable in Chinese bank notes. But this reform is not likely to be effected at present.

The chief need of the Bank of China seems to be its emancipation from Government control subject to political influences, and this its officials have recognized by causing the regulations to be amended (Nov. 21, 1917) in such a way as to encourage subscriptions to its stock by giving the private stockholders a voice in its management. Article III has been canceled and Article XVI has been changed so that shareholders

may now vote for directors and inspectors without waiting for the public subscription to reach 100,000 shares, or even to equal the shares held by the Government. Article II has also been amended, and while continuing the authorized capital at \$60,000,000, it limits the capitalization for a period to \$10,000,000, of which the Government may subscribe any amount, at its discretion.

IMPROVEMENT HAS BEEN MADE.

The investing public, however, shows no great eagerness for additional shares, and its participation is not likely to be large enough in the very near future to eliminate the present difficulties. The amendments, nevertheless, in conjunction with the possibility of a foreign loan for currency reform, have increased somewhat the credit of the outstanding notes, and whenever these notes drop below 65 they are heavily bought up by the money changers as a speculation.

AMOY DISTRICT.

United States gold coin imported during the year ended December 31, 1917, amounted to \$9,000 United States.

Imports of gold and silver during the year ended Dec. 31, 1917.

The principal coins in circulation in Amoy are the Mexican dollar, the Yuan dollar, the Hongkong dollar, the Japanese (Formosan) chopped yen, and the piaster of Indo-China. In addition to these, which circulate as of equal value, there are some issues of Singapore dollars which also circulate at par. The subsidiary coinage consists of 20-cent pieces, 10-cent pieces, and 1-cent pieces, which are in circulation all over China.

The actual currency is the "chopped" Mexican dollar. Rates between gold and same are quoted as follows: Highest premium, 0.875; lowest, 0.58125; average premium, 0.70.

The small coins in circulation are of 10 and 20 cent denominations; these subsidiary coins are worth 11 dimes to the clean Mexican dollar.

The chopped dollars are of the following description: American trade dollars, Singapore dollars, Hongkong dollars, Indo-China dollars, Philippine dollars, Japanese silver yen, Spanish dollars, Chinese dollars.

The chopped dollar is usually at a discount of 2 to 4 per cent in comparison with the clean Mexican dollar.

HONGKONG.

HIGH SILVER EXCHANGE.

[From Supplement to Commerce Reports, June 8, 1918.]

During 1917 silver reached its highest value in many years, resulting in a contraction, or, rather, a limitation of business; for with silver at a high value the Chinese producer secures for his exports a correspondingly low price for his goods when sold on a gold-standard market in competition with similar goods from gold-standard countries; while, on the other hand, if he has the money, his silver goes much further than usual in the purchase of goods produced on a gold-standard basis. Theoretically, imports into China from the United States, Europe, and other exporting countries should be stimulated, and to a certain extent they are stimulated, by the high exchange value of silver, although this may so depress silver prices received for Chinese exports that many lines of Chinese goods do not bring enough return to the producer to justify exportation. Unless China can sell its own products it can not buy other country's products at any price. During the past year there has been so strong a demand in the United States and other countries for certain raw materials produced by China that they have been taken in spite of high exchange and at almost any price in gold. These extraordinarily high prices paid in gold by the United States for its imports from China have not benefited the latter, however, for its returns in most lines of its exports have not been up to normal prices in silver, at least they have not been enough above normal to compensate China for extraordinary costs and expenses in other lines.

FLUCTUATIONS OF EXCHANGE.

During 1917 exchange ranged from around 57 cents gold to the Hongkong dollar as American telegraphic-transfer rate in January down to 55 cents in March, thence to around 57 again in April and May and the first part of June. It then commenced to rise and went to 60 cents early in July and then rapidly to 70 in August, and by September 20 reached 77½ for the same rate in Hongkong, although that rate was below parity with New York exchange in every other silver market at that time.

Perhaps the most significant and interesting feature of the entire upward movement of silver was the fact that by reason of a special control over the supply in Hongkong, and to some extent in China, dominant banking interests were able to hold the exchange value of the silver dollar far below its actual metal value in the markets of the world. Realizing that the advance in the price of silver was too rapid for the commerce of this part of the Far East to adjust itself thereto, the colony's banking interests refused to follow the price of silver in the markets of the world in their exchange rates. On September 22, when silver reached its highest point, the telegraphic-transfer rate of the Hongkong dollar was 77½ cents, while the parity of silver, that is, the actual value of silver in Hongkong as determined by its cost in the world's markets at 55 pence per ounce in London, with freight, insurance, etc., added, was estimated at 4s., or about 96 cents gold. Exchange in Hongkong, therefore, was 17½ cents or about 18.5 per cent below the value of the silver it represented. In Shanghai on the same date the telegraphic-transfer rate of the tael at \$1.17½, with the silver parity of the tael placed at about \$1.30, was 12½ cents or about 9 per cent below the value of the silver the tael represented.

This policy of holding down exchange was followed more or less closely during the rest of the year. Unquestionably it had a marked effect in protecting the commer-

cial interests of the port, for had there been no prohibition of exports of silver from the colony and no such control of the exchange situation, the result would probably have been the disappearance of the stock of silver in Hongkong banks, the whole system of advances and credits to customers of Hongkong banks would have been destroyed, and the business of the port would have come to a standstill.

Gradually the import and export trade of the port adjusted itself to some extent to high exchange conditions, and Chinese producers in Hongkong's trade territory also met changed conditions accordingly. Notwithstanding this, it is patent that comparatively low exchange is the foundation for the best average import and export trade in China and Hongkong. So long as present exchange conditions exist the free shipment of Chinese produce is impossible even at present high gold prices, and until China can ship its produce freely to a good market it can and will do comparatively little in the import line.

During the year Hongkong's subsidiary coinage, which for years has been at a discount compared to the corresponding standard silver dollar, has been quite steadily fixed at par, being subject at times only to nominal premium or discount at money changers in the matter of the temporary demand and supply of small coins. During the past 10 years the colony has been subject to a drain of as high as \$5,000,000 silver and more in a single year to accomplish this result, having retired a total of \$21,407,459 up to the point where this final result was assured, about half of which was retired in the last two years of the operation. The past year has demonstrated the success of the whole undertaking.

HUNAN PROVINCE.

PRECIOUS METALS FOR 1916.

[By Consul Nelson T. Johnson, Changsha, China.]

The local mint has, so I am informed, never coined anything but copper or brass. Notes have been in the past—and still are, for that matter—issued by anyone, even barbers. They are based upon the brass "cash" and copper "cents." Sometimes they are based (in the case of private notes) on the bank notes issued by the Bank of Hunan, which is the fiscal agent of the provincial government. There are no statistics available any place to show the amount of such note currency in circulation; but it is so great in amount that coins of any kind are very scarce. Silver is especially scarce. The only silver coin that I have thus far heard of as coined in the Province is the provincial tael.

It was the practice of the old Official Money Office (the predecessor of the more modern Bank of Hunan and other banks at Changsha) some years ago to issue taels not only in the shape of the familiar "shoe" of sycee but also in the shape of a round coin. (I have two of these coins by me as I write; both are of the value of one tael Hunan weight; they have been cast in molds and stamped on both faces.) The two coins are not of the same dimensions, although they are of practically the same weight. Although these coined taels may still be purchased at Changsha they are not very plentiful.

No gold has ever been coined in this district so far as I can learn. There are a number of gold mines. Gold is mined by placer process from the gravels of the rivers in northwestern Hunan and in northeastern Hunan; but it has been impossible to obtain any statistics as to the amount obtained by such processes.

Gold is used in the arts. The wealthier classes buy gold in the shape of bars for purposes of hoarding. It is beaten into thin sheets for use in making jewelry, but there are no available sources of information at present from which it is possible to obtain any information as to the amount so consumed throughout the Province.

ACTUAL CURRENCY OF THE COUNTRY.

The actual currency of the country is copper cash, copper cents, and silver.

The square-holed copper and brass "cash" coin is generally current throughout this consular district. There is a large note circulation based on this "cash" currency.

The brass "cash" coin is supplemented by copper "cents," each "cent" representing on its face 10 brass "cash."

Silver bullion was current but scarce. Silver dollars, "Yuan," "Mexican," "Dragon" dollars, Japanese yen, etc., were also current.

COIN IN CIRCULATION.

The various kinds of Chinese silver dollars circulate at their slightly differing relative values. The Yuan fractional silver currency circulates at par, while the other kinds of fractional silver are at a discount, \$1.20 being accepted as equivalent to a silver dollar. The discount on copper coins is somewhat greater than on fractional silver. Silver ingots also circulate, in lieu of coin, at their "tael" value. There are 30 or more kinds of taels.

¹ The wide discrepancy between the amount of gold in Shanghai as given above and the amount that should be here according to the customs returns is due to the fact that the Chinese are the buyers of this gold, and when the gold is once in their hands there is absolutely no way of ascertaining statistics concerning its whereabouts or amount.

² In banks and in circulation.

PREMIUM ON GOLD.

The best explanation that can be given to this question is the answer of the local branch of the International Banking Corporation:

"It is difficult to give you an answer on the point you raise in view of the fact that as silver is the currency of China, gold is quoted merely as a commodity and has no direct premium or discount as compared with the silver currency of China. Until export of gold yen was prohibited from Japan, there was never any premium on gold bullion except such as may have been caused on a few exceptional occasions by some special demand. On export of gold yen from Japan being prohibited, the premium on gold bullion on the Chinese market rose steadily until the price of gold bullion is 307 taels as against a parity of 237 (or 29+ per cent).

Imports of gold and silver during the year ended Dec. 31, 1917.

COIN IN CIRCULATION.

None of the coins of the national currency of China are in circulation in the Shanghai district, except a few of the Yuan dollars. It is only in North China, where the Central Government has complete sway, that the above coins circulate to a considerable extent, and even there they have not displaced the old coinage.

SHANTUNG PROVINCE—CHEFOO.

Silver at bullion value and copper constitute the actual currency of the Province. Bank notes are issued by the Bank of China and the Bank of Communications and numerous native banks throughout the Province, usually in denominations of \$1, \$5, \$10, \$50, and \$100. The bank notes of the Russo-Asiatic Bank and the Hongkong & Shanghai Banking Corporation, of Shanghai, are accepted at par in Shantung, but notes of other foreign banks are discounted. Bank notes are issued by the native banks to represent a string of 1,000 brass cash and also in higher multiples. The above described coins and notes enter into ordinary daily transactions in the Province, but larger transactions are conducted in "taels."

Imports into and exports from Shantung Province of gold and silver during the year ended Dec. 31, 1917.

NOTE.—Reduced from Haikwan taels to United States currency at 1.02.

CURRENCY IN SHANTUNG PROVINCE.

[From the Numismatist, February, 1918.]

The coins at present in use in Shantung Province, China, are Mexican and Chinese dollars, 20 and 10 cent pieces, copper and brass cash. The Chinese dollars are mostly the coinage of the Tientsin Mint, others being at a discount. The 20 and 10 cent pieces are in the main from the Mukden Mint. The former exchange at the rate of about six for a dollar, with the latter worth half as much, although they are much fewer in number. Copper "cents" or "10-cash" pieces fluctuate from 128 to 145 per dollar. The exchange quotations of all coins vary from day to day. The silver coins are not used to any extent in the interior, where little commerce is carried on with the other ports. In the interior coppers and brass cash are still practically the only coins used, while silver in the form of "shoes" is used for making large purchases. The Mexican silver dollar is most generally used at this time. The new Chinese dollar, although in circulation, is seldom seen.

CHOSEN (KOREA).

RAPID GROWTH OF BANK OF CHOSEN—OUTSTANDING NOTES.

[Commercial Attache A. W. Ferrin, Peking, China, Mar. 20, in Commerce Reports, May 9, 1918.]

A bill was introduced in the Japanese House of Representatives on March 14 authorizing an increase in the fiduciary note issue of the Bank of Chosen (Korea) from 30,000,000 yen to 50,000,000 yen (roughly, from \$15,000,000 to \$25,000,000) and empowering the bank to inaugurate a trust business. These measures have been made necessary by the rapid growth in the operations of the Bank of Chosen, which is now the central financial institution of Korea and South Manchuria, and, since December 1, 1917, the sole bank of issue in the Leased Territory of Kwantung (Dairen, Port Arthur, etc.) and in the South Manchuria

Railway zone. The authorization of the expanded fiduciary note issue is especially urgent, as the bank has exceeded its legal limit by 10,000,000 yen (\$5,000,000), as the result of the taking over of the circulation of the Yokohama Specie Bank on December 1, at which time South Manchuria was placed on a gold basis, and the gold notes of the Bank of Chosen made the only legal tender in territory under Japanese control.

The outstanding notes, which were practically doubled between July and January, owing to the activity of trade in South Manchuria and the taking over of the Yokohama Specie notes, amounted on December 31, 1917, to 67,364,949 yen (\$33,682,475), of which 28,787,331 yen (\$14,393,665) was covered by specie, the balance being secured by commercial paper, etc.

FORMOSA (TAIWAN).

SHIPMENTS OF SPECIE AND BULLION.

[From Supplement to Commerce Reports, June 4, 1918.]

The following figures show the proportion of Taiwan coin and bullion (gold and silver) imported from and exported to Japan and other countries:

JAPAN.

JAPAN'S INCREASED MINERAL PRODUCTION.

[Consul General George H. Scidmore, Yokohama, in Commerce Reports, Mar. 28, 1918.]

Last year's mineral output in Japan shows a fair result, according to the mining bureau, as quoted by the Japan Advertiser. The paper declares that the mine operators have tried to meet fully the demand created by the war. A summary of the mining bureau's report up to the close of November is given as follows: Gold, 202,339 ounces; silver, 6,274,177 ounces; copper, 186,153,304 pounds; iron, 70,463 tons; coal, 20,554,022 tons; petroleum, 2,021,371 barrels; sulphur, 196,478 tons.

Gold and petroleum fell off by 8 per cent and 11 per cent, respectively, from the preceding year, but all other minerals were seen to have a marked increase. This reduction in the output of gold in Japan has been by the unchanged value of gold and the sharp increase in the cost of working and refining. All through the year this falling off continued, without a single recovery being registered.

Coal, silver, and iron, which were wanted more than ever during the year, show a sharp increase of 13, 24, and 22 per cent, respectively. Copper and sulphur fell off in their sale to Europe last year, but their output nevertheless increased 12 and 4.1 per cent, respectively.

MOVEMENT OF GOLD.

[From Commerce Reports, Feb. 19, 1918.]

Heavy shipments of gold during the first nine months of the year constitute one of the most striking features in Japan's foreign trade for 1917. In November and December the imports of gold were negligible in amount, and in October only \$1,352,000, mostly in the first 10 days of the month. Practically all, therefore, of the \$193,000,000 of gold imports arrived during the first nine months of the year; and most of this was received from the United States.

Exports of gold, while especially large for the first nine months, amounted to only \$3,000,000 in October and ceased entirely after that month.

The very large balance of imports of specie fails to balance the excess of merchandise exported. Naturally the exchange rate shows a material rise. This result is natural,

in view of the constantly accumulating excess of exports, which can not be settled by the shipment of specie.

The following table shows the value of gold and silver imported and exported by Japan in 1916 and 1917:

Article.	1916	1917	Increase.
Imports:			
Gold.....	\$49,801,000	\$192,915,000	\$143,114,000
Silver.....	562,000	2,609,000	2,047,000
Total.....	50,363,000	195,524,000	145,161,000
Exports:			
Gold.....	11,148,000	75,094,000	63,946,000
Silver.....	2,850,000	1,545,000	¹ 1,305,000
Total.....	13,998,000	76,639,000	62,641,000

¹ Decrease.

SILVER-COIN DEFICIENCY.

[From the Economist, London, Nov. 17, 1917.]

The highest-value coin in circulation in Japan is the silver 50-sen piece, equal to about 1 shilling. The silver yen (2s.) and gold coin are practically nonexistent; larger sums are negotiated by notes of 1, 5, 10, and 100 yen. At present there is a scarcity of subsidiary coins, which is growing more and more keenly felt, and as the minting of a large amount of silver money can not be effected in a short time the department of finance is reported to be contemplating the issue of 50-sen paper currency to relieve the pressure, also to increase the issue of 1-yen notes. The 1-yen notes now in circulation amount to 100,000,000 yen, or about double the amount for this time last year. The scarcity of auxiliary coins has produced a tendency to hoard them, while exchange brokers have begun to collect them in anticipation of a great demand for them toward the end of the year, some having had the pleasant experience at the end of last year of exchanging 100 yen at the exorbitant fee of 16 yen.

NEW CURRENCY ISSUE BY JAPAN DUE TO SMALL-COIN SHORTAGE.

[From the Commercial and Financial Chronicle, New York, Dec. 22, 1917.]

The following regarding the issuance of new currency by Japan to meet small-coin shortage appeared in the Official Bulletin of December 18:

"Commercial Attaché Rutter, at Tokyo, reports:

"Two recent steps taken by the Japanese Government illustrate the difficulties attendant upon the use of subsidiary coin whose metal value is comparatively close to the mint value. In October announcement was made that paper fractional currency would be issued to the amount of 30,000,000 yen (\$14,940,000). Early in November a portion of this issue was put in circulation. The new notes are exchangeable for regular bank notes and are legal tender up to 10 yen (\$4.98).

"More recently the Japanese Government has announced three prizes of 1,000 yen, 500 yen, and 300 yen for the best designs submitted for a new silver 50-sen piece (24.9 cents). The new coin is to be materially smaller than the one now in circulation.

"The present 50-sen piece is 80 per cent pure and weighs 2.7 momme (0.3255 ounce troy). The coin, therefore, contains 0.2604 ounce of pure silver and 0.0651 ounce of copper. At par the money value of the coin is 24.925 cents. This corresponds to 95.7 cents per ounce troy if the value of the copper is disregarded.

"On September 19 the New York quotation of silver was \$1.055 per ounce. For a considerable period the excess of the bullion value over the mint value made it profitable to melt Japanese subsidiary coin or ship it to China. The country, as a consequence, became denuded of small change, and it was and is extremely difficult to get money changed except through money changers at comparatively high rates. It was no unusual thing to pay 10 sen, or even more, to change a 5-yen note, and in that case the buyer would receive four 1-yen notes and only the fraction less than a yen in subsidiary coin."

PERSIA.

Coinage of gold and silver during the calendar year 1916.

[From Forty-sixth Annual Report of the Deputy Master and Comptroller of the Mint, London, 1915.]

The amount of gold returned from industrial use, deposited at the mint for recoinage in 1916 from old jewelry, was 289.4759 ounces, valued at 75,090 krans, equivalent to 5,984 United States dollars.

The silver 3-shahi piece, called "shahi safeede" or "white shahi," of which a quantity was coined in 1915, weighs only 657 milligrams (about 10 grains). There are two types of this coin, one coined for high officials, etc., and one for high clergy, the difference being only in the inscription. Both are used as largesse on fete days. The coin is accepted as money, but it is ill adapted for this purpose, being too small and thin.

RATES OF EXCHANGE IN TEHERAN.

[Vice Consul Ralph H. Bader, Teheran, Persia, May 4, in Daily Consular and Trade Report, July 9, 1917.]

The following were the buying and selling rates of exchange between Teheran and London, New York, and Paris on May 1, 1917: London—buying, 28.50 krans per £1; selling, 29.50 krans. New York—buying, 5.90 krans per \$1; selling, 6.30 krans. Paris—buying, 1.08 krans per franc; selling, 1.13 krans. These are the quotations given for sight drafts.

GOLD AND SILVER HELD BY BANK OF EGYPT.

The balance sheet of the National Bank of Egypt as of December 31, 1917, per the London Bankers' Magazine of June, 1918, shows gold and silver coin holdings totaling £E76,750,892, equivalent to \$379,387,334.

EGYPTIAN CURRENCY CHANGE.

[From the Bankers' Magazine, London, January, 1917.]

According to the Board of Trade Journal, the text of a law and of decrees made thereunder relative to the monetary system of Egypt has been published in the Egyptian Journal Official. It is enacted that the unit of value in Egypt remains the gold Egyptian pound of 100 piasters or 1,000 milliemes, and that the following coins are legal tender: Gold, Egyptian pound and the piece of 50 piasters; silver, pieces of 20, 10, 5, and 2 piasters; nickel, pieces of 10, 5, 2, and 1 milliemes; bronze, pieces of ½ millieme.

The weight and fineness of the Egyptian pound remain as before, viz, 8.500 grams gold, 875 fine. The pound sterling is also legal currency in Egypt at the fixed rate of

975 milliemmes (at this rate £E1 is equivalent to £1 6½d), and the gold pieces of the countries of the Latin Monetary Union equivalent to the French 20-franc piece will be permitted to circulate at a uniform rate of £E0.7715. Silver coins are legal tender up to a sum of 200 piasters, and nickel or bronze coins up to a sum of 10 piasters. The existing metallic currency will continue to be received at banks until the date of its withdrawal from circulation is officially announced. The respective values of the new Egyptian coins will be designated thereon in both Arabic and English characters.

CHANGE IN CURRENCY SYSTEM AT BEIRUT.

[From the Numismatist, June, 1916.]

For many years past practically all business in Beirut was transacted by means of the Beirut market piaster, a depreciated money of account valued at \$0.035306; in other words, the Turkish gold pound was always reckoned as consisting of 125½ Beirut market piasters or 4,985 market paras. The smallest coins were the nahassys, worth 2½ market paras, and the metalik, worth 12½ market paras, or 5 nahassys; and the Turkish gold pound therefore consisted of 398 metaliks and 4 nahassys.

A few weeks ago, however, by Government edict the currency system was changed, the nahassy being abolished. The smallest coin now is the half metalik; 1 metalik is equal to 10 paras; 4 metaliks, or 40 paras, equal 1 silver piaster; 2½ silver piasters equal 1 beshlik; 8 beshliks, or 20 piasters, equal 1 medjidie; 5.4 medjidies, or 108 silver piasters, or 432 metaliks, equal 1 Turkish pound.

It will be seen that when these new currency regulations went into effect the holders of metaliks lost heavily, and as a consequence these holders, mostly retail dealers, advanced their prices anywhere from 10 to 25 per cent. The value of the new silver piaster in American currency works out at \$0.0407407.

GERMAN EAST AFRICA.

ISSUE OF GOLD COINS.

[From the Numismatist, July, 1917.]

In Spink's Numismatic Circular for March-April, Mr. Henry Garside describes a new issue of gold coins for German East Africa—a German colonial war issue. The coins were struck at Tabora, where Mr. Garside states a mint was established by the German colonial authorities, who were unable to obtain coins from Germany for circulation in their East Africa colony.

The obverse bears the familiar arms of the German Empire (eagle) with the inscription above "Deutsch Ostafrika," below "15 Rupien." The reverse has an elephant walking to right, with a mountain in the background. In the exergue "1916" and the mint mark T (abora).

It is also stated that coins of smaller denominations—5 and 50 hellers—with the same mint mark, struck in an alloy of copper and zinc, have been issued in German East Africa.

MOROCCO.

Silver coinage executed in Paris during the year ended Dec. 31, 1917.

RHODESIA.

PRODUCTION OF GOLD AND SILVER.

[From the Mining World and Engineering Record, London, May 25, 1918.]

In the course of an interesting and informative address, delivered at the opening of the Rhodesian Mining Conference, at Bulawayo recently, Mr. C. S. Montagu, the secretary for mines, said that, considering the difficulties under which the industry was working, the fact that the mineral output for 1917 totaled £4,639,335 (United States, \$22,577,324), or a decrease of only £190,369 (United States, \$926,431), as compared with the previous year, could not but be regarded as satisfactory. The gold output of £3,495,391 (United States, \$17,010,320) it is true showed a decrease of nearly £400,000 (United States, \$1,946,600)—a substantial drop—but at the outbreak of the war a much greater setback than this had been feared. The total production, however, is a very creditable one to all concerned, and it shows that in the gold industry Rhodesia has large spending power—in fact it is the pivot upon which the financial position of the country revolves. The number of producers during the year was 466, a decrease of 28 as against the previous year's figure, and it is of interest to note that 14 produced gold equivalent to 61 per cent of the total. The average yield was 26s. 10½d. (United States, \$6.48) per ton crushed, an increase of 9½d. (United States, \$0.19) per ton. As regards silver, a small increase of £4,702 (United States, \$22,882) is shown.

TRANSVAAL MINING IN 1917.

[From Engineering and Mining Journal, New York, Jan. 12, 1918.]

The year 1917 was the most difficult of the war period for the gold-mining industry of South Africa. The native labor position was increasingly bad, owing chiefly to the recruiting of natives for military work in Europe and to the fact that greater numbers are needed year by year for industries other than that of gold mining. The principal result of this condition was slightly smaller tonnage, and, therefore, reduced yields from some of the mines. Further numbers of the white employees were released for military service, and payments to their dependents became a considerable charge on the mining companies. The cost of all materials increased, and some extensions of plant were held up owing to the delay in getting the necessary machinery.

CURRENCY NOTES IN BRITISH WEST AFRICA.

[From the Numismatist, June, 1917.]

The Board of Trade Journal quotes the Sierra Leone Royal Gazette to the effect that the West African currency board has issued special West African currency notes in Nigeria, which are made legal tender in that colony. These notes are in two denominations, viz, 20s. and 10s. (\$4.87 and \$2.43).

As an experimental measure a number of these notes are being circulated in Sierra Leone. They are issued against silver, which will be kept locally to redeem them, and will be accepted at all treasury stations throughout the colony and protectorate in payment of railway, customs, post office, and all other dues payable to the Government. Arrangements have been made with the Bank of British West Africa whereby these notes will be redeemable at their face value at all its offices, except in cases where it is clear that they are being used in large quantities as a form of remittance.

¹ Gold holdings of the Bank of France are exclusive of \$396,542,541 held abroad.² The gold holdings of the Bank of Russia in the above statement have been revised by eliminating the so-called gold balance held abroad; on the latest reported date the amount so held was \$1,123,480,190.³ On July 14, 1914, in both years.⁴ On Aug. 6, 1914, in both years.

GOLD IN NEUTRAL COUNTRIES.

[From the Bankers' Magazine, London, November, 1917.]

The table given below, taken from the Morning Post, is of interest, revealing, as it does, the extent to which neutral countries have benefited by the war, in so far as such benefit is expressed in their increased holdings of gold. The table shows the gains in gold which have been secured by the State banks in six of these countries since the beginning of the war.

Approximate holdings of gold by State banks in neutral countries.

Total gain.....							586,413,250

Of course, says the city article of the Morning Post, it should be clearly understood that the mere movements of gold do not in themselves adequately express either the increased volume of commercial business done by the countries concerned or the profits secured in consequence of the war. Indeed, they may not even sufficiently express the actual volume of gold obtained during the three years, inasmuch as the figures only refer to the holdings of the actual State banks. On the other hand, it seems probable that the time has now arrived when the other side of the picture is being presented rather forcibly to the population of the neutral countries, and the charm of enhanced profits and large gold accumulations is being lessened by the rise in the cost of living and probably even by the difficulty of actually securing an adequate supply of many important commodities. A further interesting question which arises out of the gold figures given above is the precise direction whence the gold has been obtained.

Production of gold and silver in the world since 1860.

[The annual production of 1860 to 1872 is obtained from 5-year period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint.]

Calendar years.	Gold.		Silver.	
	Fine ounces.	Value.	Fine ounces.	Commercial value.
